To us as sportsmen, *Simon pure*, looking at the Centennial from a point the most natural for us to take up, we are not sure that our enthusiasm can be called unbounded. The wilderness of the olden times has its own romance and its own attractions. It was the home of the early nimrods of America, the scene of their conflicts, of their feats of daring, of their wonderful adventures by flood and fell. The backwoodsman, the wigwam, the log hut, the trail, the moccasin, have romance in their very names. In connection with them we are disposed less to laud the conversion of rivers into highways, than to lament the lost streams whose rocky beds alone remain to mark their course, less to admire the fruitful fields of the West than to linger over traditions of its old time glory. It is true that if there were fish then, there are also fish to-day. Even Izaak Walton, the immortal, may have delighted some early settler on the Father of Waters, as he traveled towards the setting sun, just as to-day he stands pre-eminent as the philosopher of the rod. It is true that if all change has not been for the better, a little of it has been so. We do things more scientifically now-a-days, with our rifles designed for all purposes, with our breech-loaders, and our wonderfully natural artificial flies, but that is all we have to show for the loss of many a stately forest and fruitful stream. The appliances of science, the results of ingenuity, so far as sportsmen are concerned, must engage unequally in an endeavor to compensate for the irretrievable loss sustained in the sweeping change which has overspread the face of nature.

We are lucky, however, that we can leave the deafening din of the stately city, mount our iron horse, and ride a thousand miles away, and there, near by where perhaps the graves of an Indian tribe are sleeping, peacefully ply the "gentle art," as we meditate upon America's present greatness, the glories of a hundred years of independence, and the history which added centuries are to create. Let us be great and good as we are great.

INTERNATIONAL ROWING.—Since our comments upon this subject in last week's issue, we have official information that Dublin will not compete in the International Regatta at Saratoga. Dublin has, however, not only declared her intention of entering at the Centennial Regatta, but has been the first of all clubs to send an official entry naming her crew, and remitting the entrance fee.

—Leland's Clarendon hotel at Saratoga, is receiving a large patronage from summer sojourners. It is delightfully located, and one of the most popular resorts at the Springs.

GAME PROTECTION.

OHIO.—A special meeting of the Ohio State Sportsmen's Association is called for this day, at the rooms of the Cuvier Club, in Cincinnati, when important business was to have been presented to the members present. Under the presidency of Hon. Thomas A. Logan the Ohio Association has been untiring, even in the face of discouragement, in its efforts to promote the best interests not only of the sporisman but of all who are interested in the protection of fish and game. If we remember aright, the last Ohio Legislature passed a trespass act, which is most obnoxious in its provisions, placing restrictions upon shooting which are almost insurmountable. If the present meeting of the Ohio Association was with a view to procuring an abrogation of this act, we trust that it may be successful.

MINNESOTA.—A sportsman's club for the preservation of game and enforcement of game laws has been organized at Shakopee, Scott County, Minn. The following are the officers of the club until the next annual election: W. H. Briggs (commonly called "Governor"), President; John McMullen, Vice President; Wm. Wilson (judge), Secretary; Chas. Bormarth, Treasurer; Executive Committee, President and Vice President, C. A. Stephens, John Seaverbox, and L. E. Moody. A meeting will be held on July 10th to adopt articles and by-laws. There will be plenty prairie chickens there this season.

SPORTSMAN'S CLUB OF CALIFORNIA AND FOREST AND STREAM.

SAN FRANCISCO, June, 1876.

EDITOR FOREST AND STREAM:—

We are getting along finely with our sportsman's club. We have now about 180 members. The fishing for salmon and trout in Lakes Merced and San Andreas has not, up to this time, been so good as it was last year, but in Pilarcitos Lake some very nice sport has been enjoyed, many good-sized trout having been captured with the fly, spoon and worm.

The constitution and by-laws of the club, in pamphlet form, have just been published, with a list of members. In it are some of the best and wealthiest men of the city and State. The by-laws consist of article 1, section 1: No person shall use more than one rod at one time, while fishing in any of the waters under the control of the club, and no trout, grilse, or salmon shall be taken from such waters, except with rod and reel. No persons shall set any lines for capturing fish from the shore, or shall fish during the night in any such waters. Section 2. Persons not members of the club may be admitted to the privileges of the same, subject to the following regulations: A member may invite one or more guests to the club house or waters of the club, and such guests shall be subject to all the rules governing the members of the club, and the member shall be held responsible for the conduct of his guests, and for any pecuniary responsibility which they may incur. Members shall pay $2.50 per day for each guest fishing any waters controlled by the club. In the California *Horticulturist* I have now a sporting department—the Rod and Gun. It is in the June number, but for some months previously I had prepared and published articles of this character. This, I hope, may lead sportsmen here to send for your excellent weekly, the FOREST AND STREAM, (as a nibble at my papers may induce a good bite at yours) a work which treats so instractively and amusingly at large on all such matters; such as the narratives and adventures in both shooting and fishing from all points of the world, with all other sporting subjects and natural history, botany, etc., etc., being most inviting and interesting to all lovers of such things, who are evidently increasing in numbers every day. Fishermen who take delight in the rod, and sportsmen who are equally fond of the gun, miss a vast amount of pleasure and information when your splendid and variously furnished work is as a sealed book to them. This I assert in all sincerity and truth, with a thorough conviction that your periodical only wants to be seen and read by all true followers of field sports for them to lose no time in sending for it at the small price for which they can obtain so valuable and enjoyable a publication. E. J. HOOPER.

We certainly attach proper value to the expression of approval which the well-informed editor of the California *Horticulturist* has so kindly volunteered in behalf of this journal, and are proud and pleased to have earned it. If the circulation of this paper is not so large as he and its other patrons think it should be, or is not multiplying with geometrical strides, it is attributable in a great degree to the universal hard times which "try men's souls" now, just as they did in 1776. Nevertheless, we have no reason to complain, either of the paucity or of the intelligence of our constituency, which includes without doubt a larger proportion of eminent men of the United States and Canada than any other journal. To have such support is success in itself, and to have earned it is an honorable reward of effort. Mr. Hooper has contributed largely to the columns of the FOREST AND STREAM information relative to matters and things on his side of the continent, especially of the *Salmonidæ;* and we are encouraged to learn from himself that he is to include a natural science department in his valuable magazine. This will add much to its interest in the view of eastern readers, and will supply a source of information much needed by sportsmen, namely, a journal devoted to the physical geography and natural history sports and characteristics of the Pacific coast.

OBITUARY.—We have to add to the list of friends of this paper who have lately deceased, the name of John Auchincloss. Well known as a man and a merchant in this city, we can only allude to his high qualities as a disciple of the angling art. But a few days before his death Mr. Auchincloss called at our office, and obtained samples of the flies most likely to be of service on his Canadian trip. But the flies were destined never to be wetted; he had only reached Quebec, when the summons met him, and the journey was suddenly cut short. Mr. Auchincloss was an ardent and skillful salmon angler, and his trips to his favorite river were anticipated and enjoyed with the keenest relish. We add our mite of sympathy for those left, to the abundant measure from a thousand sorrowing friends.

—The "Forest and Stream Hat," made by Espenscheid, 118 Nassau, is very beautiful. We sport one of them.

THE PRACTICAL FLY-FISHER.

A CHAPTER OF INSTRUCTIONS ON ANGLING WITH FLY.

At this season some practical instructions in Angling will be quite acceptable; and inasmuch as instruction in the art is most difficult to impart through books, it is possible that some hints may be conveyed here that have not been printed before. In fact, it may he as well to state that the Editor has long contemplated writing what follows, to supply the wants which he has felt existed.

Imprimis: The methods of casting a fly vary according to the character of the water to be fished—whether it be lake, river, or stream, or whether the angler is to wade, or fish from a boat, or the bank. There are a few general rules that govern, however; and the first to be observed is to *keep out of sight*. To enable the angler to do this a long cast is frequently indispensable. If fish were not shy, the angler might dispense with flies, and walk up boldly to the water and dip them out with his hands. But to cast a long line without bungling, requires studious practice. For a proper cast, the line should not only be delivered straight and evenly, without kinks, coils, or bights, but the flies should be laid lightly on the water, as the natural flies settle. Hence the line, and the casting line, must be delicate in size and texture, and the flies must be small, so as to make no splash when they fall. It is because such fine tackle is required, that the handling of a heavy fish becomes difficult; for it is apparent that to lift its weight on the line would part it. To relieve the strain a flexible rod is required; and the rod has its very important part to play throughout in killing the fish. The fish must he killed on the rod, and not on the line. To exact full service from a rod, a perfect arch (longer or shorter,) must be maintained from the moment a fish is hooked until he is landed. The management of this arch in motion is the science of angling. The rod has, of course, its proper functions to perform in making the cast. The essential qualities of a rod are elasticity and stiffness; first, a uniform elasticity that is evenly distributed and maintained throughout its length from but to tip; and second, that peculiar quality of stiffness which acts with a *yielding resistance*, preventing the fish from exerting its full strength on the hook, the leader, or the line, just as elastic traces would prevent a horse from exerting his full strength in drawing. No rod will throw a line deftly unless it possesses these requisites, and in the selection of a rod its weight, length, and suppleness, must be ganged by the physical properties of the purchaser, because the same rod, like the same gun, will not serve all sportsmen alike. The angler ought to he able to tell when a rod feels well balanced in his hand, just as he does a billiard cue, an oar, a gun, or a croquet mallet. Given the rod and line, we need such a reel as will deliver the line freely, yet not so rapidly as to permit it to overrun, and we accordingly secure a light pressure or check by the "click." The click also telegraphs to the car what the fish is doing, and in this way renders a service greater than is generally supposed.

The importance of using small flies, even in discolored water, should impress itself upon the angler. Lightness and neatness of form are characteristics of river insects, and therefore a serious objection to the flies in common use, and at the tackle shops, is that they are much too bushy, thereby not only exposing their deception more quickly, but preventing by masses of feathers the trout from hooking themselves when they rise.

A second rule in angling is, to tread lightly along the streams, and when in boat, to avoid noises that cause vibrations. It seems to be settled by scientific tests that fish do not hear, but their perception through the nerves of feeling is very keen, and sounds are easily communicated through the water by sudden jars, the careless dropping of an oar, or deep bass tones of the voice. It is well known that a deaf person can hear sounds of a voice or instrument, if a hard wood stick be placed in his teeth, connecting with the object emitting the sounds.

The angler about to whip a water should first straighten his snoods and leaders by soaking them in a basin of water; after which he can keep them tolerably straight by winding the cast around his hat. At a proper distance from the angling place, let him put his rod together, first adjusting the reel to its place, then the tip and second joints, and the second joint and but last, keeping the hands close to the ferules and as near together as possible. Next reeve the line through the rings and draw it off from the reel until its length is equal to a little more than half the length of the rod; then, with the rod held perpendicularly, unless adjacent objects prevent, bend on the casting line, hook the tail-fly or stretcher into one of the bars of the reel, and wind up until the line is taut. You are then ready to proceed to business. Two flies, four feet apart, are enough at any time, and where there are weeds, bushes or snags, or the trout heavy, it is wise to use only a single fly. The chance of hooking your fish is increased when two flies are on, but the chances of landing them are much diminished. It is unpleasant to catch a weed with one hook and a fish with the other, or to have two heavy fish run contrariwise and carry off your line.

In fishing a stream, it is sometimes necessary to pass through thick brush. This can be done with dexterity, if the angler hold his rod horizontally, pushing it through, but or tip foremost, according to circumstances, the former being preferable. Having approached the bank, select your casting place with judgment; we mean the spot where you propose to throw for a rise. A previous knowledge of a stream gives one a great advantage every way, by enabling him to cast so as not to disturb the fish, and also to waste no time in testing inauspicious or improbable places. Choose also where you will land your fish, and determine how to provide for any emergency that may arise. Having calculated the length of the line you propose to cast, see that you have room enough for your back line, so that you may avoid being hung up in trees or caught in a rock or stump. Note the sun, and observe that your shadow does not fall on the water. If it be a bright calm, don't be in a hurry to cast, but wait for a riffle on the water, or for the sun to go under a cloud, as your chances for a rise are thus increased ten-fold; always remembering that in trout-fishing nothing is gained by being in a hurry. If the wind blows briskly in your face, don't attempt to cast against it, as your flies will only get into the trees, but select a bend in the river, or wait for a more favorable opportunity. If you wish to cross a stream to change position, walk to the nearest shoal and wade to the opposite side.

When everything is auspicious, and you are ready to cast, grasp your rod in the right hand above the reel, and hold the stretcher fly lightly between the thumb and fore finger. Then throw up the tip of the rod gently, at the same time letting go the fly, and when the line is at its full length drop the tip and you will be surprised to see how gracefully the fly will light on the water twenty feet distant. If you discover that you are to full short, or go too far, recover the line before it touches the water, and try again. If the fly should touch the water and fail to provoke a rise, trail it lightly and briskly along the stream in a semi-circle until you are obliged to take up the slack, and then cast again. After casting from one stand three times over a spot, including the width of the stream, and failing of a rise, give the fish a yard more line, by drawing it off the reel with the left hand; then raising the rod smartly, take up the slack, throw the rod back of the shoulder, and when the line has passed behind to its full length, project the tip forward as if you were going to strike the water, observing to never let the rod drop below a position horizontal and parallel with the water. The movement we have described is technically known as casting. We will make it still plainer, as it must be practised by one desiring to become proficient. We will suppose the angler standing up to his knees in mid stream with his line trailing down with the current to its full length in front of him. Draw off enough line from the reel to lengthen the cast as much as is required; keep the elbow of the right arm at ease, but well in toward the body, and the wrist flexible. Raise the rod evenly and without jerking, with force sufficient to lift the line from the water; throw the tip upward and backward until it takes a position over the shoulder at an angle of 45 degrees and no more, keeping the tip a trifle outward, away from the body; calculate the length of time required to straighten the line out behind to its full length, and then bring the rod forward with vigor, striking down squarely and directly in front of you, always remembering on no account to let the tip drop as low as the surface. It will be perceived that in the upward motion the thumb points outward, and with the downward motion it turns inward. This is the infallible key to the whole situation. By practising this combination of movements one will learn not only to lay out his cast on the water in good form, but by increasing the force to cast great distances. At no time should the efforts be jerky. The body should be well poised, and the arm move with the evenness and method of a pendulum. With a long line a sudden upward jerk is liable to break the rod either at the first or second ferule, or to throw the line out of its natural parabolic orbit; while a too sudden or premature projection of the rod forward will snap off the flies, tangle the line, or catch the seat of one's corduroys with the hook, insufficient time having been given for the line to straighten itself behind. Inexperienced anglers are annoyed by the snoods chafing and breaking off at the heads of the flies; the cause is imperfect casting. The fly being heavier than the delicate line, moves faster through the air by the impetus given it, and when a quick jerky motion is made in casting, or a too much up-and-down motion is given to the rod, the fly has to drag the line along like a shot taking a life-line to a wreck, and lights on the water with a thud that sends it back at right angles with the link or loop. The friction is more than the strongest gut can stand.

In lifting very long lines from the water, it is desirable to start them first, and then withdraw them wholly, otherwise the weight and sag is liable to part the tackle, and break or strain the rod; also before making the forward cast, count the time it has taken to withdraw the line from the water and bring the rod to its position over the shoulder. The flies will then have time to traverse the entire arc which a well-made cast requires.

When about to change position on the stream, reel up and take your line out of the water, unless you are wading, when it may sometimes be preferable to let the line drift down ahead of the angler, if the current be swift. Wading possesses several advantages over fishing from the bank, for it enables the angler to fish every part of the stream which the other method does not, and gives him more casting room; the fish are not so easily frightened, and when hooked are more easily landed. Fish can see in clear water with great acuteness, but the refraction seems to impair their vision. Fish have a habit of backing slowly down stream as the angler advances, not seeming greatly disturbed; but the moment they do take flight they scoot up stream like lightning. Streams may be fished up or down at option, though down stream is the best. The only advantage of fishing up stream is that while you are playing your fish, you do not alarm others above you, as you are supposed always to lead your captive down stream.

It is useless to waste time in whipping every foot of a stream. Trout lie where cool bottom springs bubble, or lateral brooks come in, or food gathers, the depth of water favors, or shade and protection serve. The strongest and biggest fish preempt the choicest places and deepest pools, but good fish are often taken in swift water flowing about six inches deep over pebbly bottoms where the conferva attaches itself to stones and sways in the current, affording both food and lurking places. In large rivers it is useless to fish except at rapids, or where a lateral stream flows in. Casts may be taken when wading, or from the bank, according to depth of water and other circumstances. Where the river makes short turns there is a deep hole on one side and a corresponding sand-bar or flat on the other. Trout are likely to be found in all these deep holes, because the current carries the food there; and for the same reason they are also to be found under the bank opposite to the wind. Where a river is divided by an island or patch of weeds, a cast will be rewarded. In spring the fish are much scattered, and can be taken almost anywhere, as they are foraging for food, the insects not yet having been hatched out. Later in the season the trouts' food is swept in plenty and variety to their dining-rooms in the holes under the bank. And in autumn nature teaches them to resort to the springheads and smaller tributaries for the purpose of spawning. Trout feed chiefly at night, and hence are more readily taken on dark and cloudy days, and between sunset and dark.

In using the fly the object is to imitate the movements of the natural insect as nearly as possible, and the angler often exercises great ingenuity in so doing. To drop the line naturally on the water, and then to keep it endued with life, is the strategem. From the moment the fly touches the water the angler should keep his eye on it. Trout often feed a little under the surface; they do not always break when they rise, but quietly suck in the fly. The angler can frequently detect a quick movement of a dark object beneath the surface, or a sudden flash of light, which he knows to be a fish making for the hook, and he instinctively raises the tip of his rod and hooks it. A novice might have let a dozen of these opportunities pass. Often the whereabouts of a trout is betrayed by a break or a leap from the surface, and the wide-awake angler will make it his business to toss his fly over the spot sooner or later. Sometimes the trout rush at the lure like a flash, leaping clear over it in their eagerness. They are difficult to hook then. A fish will hook himself only in cases where the fly first touches the water at the end of a straight line, or when the line is being withdrawn smartly for a new cast. In all other cases the skill of the angler must be employed. If this "strike" be made with vigor or desperately, either the trout will be jerked high in the air, the tackle will be broken, the hook will tear out, or, what is more probable, the hook will miss altogether. Then the awkward effort will scare the fish away, and the angler must proceed to another place. How to hook a fish cannot he told; but if the angler will school himself never to raise the arm, but simply to use the wrist, lifting the thumb slightly when a fish rises, his lesson will be nearly learned. He must remember that his wrist is the fulcrum of a long lever, and that a slight movement there will produce an astounding demonstration at the other end. It is apparent that the offer of an undesirable fish can often be declined. If fish in a pool be frightened, give the pool a half hour's rest.

Having hooked the fish the next thing is to handle him. If well hooked, he will go to the bottom, and if slightly hooked he will flounder about on the surface. Upon this showing the angler determines his mode of proceedure. In any case put him into the basket as soon as possible. Do not work him against the current more than can be helped. If you see the strength of your rod tested too much, give him line; when he yields, reel up. The point is always to keep him well in hand, as you would a horse—always to feel him. When necessary to lead him out of weeds or dangerous places, advance the but of the rod. It will stand an enormous strain. Keep the line always under your thumb, with the thumb on the rod. If the fish leaps, lower the tip of the rod so as to give the line slack, otherwise he will tear the hook loose. Having at last taken the mettle from him, reel in short, throw the rod back over your shoulder, and slip the landing net under him. If you have no net, lead him to the bank and draw him out, if he be a large one. Small ones can be lifted by the line.

International Live Stock Exhibition.—The Bureau of Agriculture, Centennial Commission, has a new circular in press, announcing important changes, and such as commend themselves strongly to the breeders of the country as eminently practical. The system of awards will be the same as that adopted for the government of all the international judges. Every animal possessing points of excellence will be reported upon more or less fully, according to its inherent and comparative merit. Exhibitors whose stock receives the commendation of the judges will be presented with a special report and diploma, attested by the signatures of the judges, specifying the typical features of each animal, and supplemental to these will be presented the bronze medal of the Commission. The judges in each group will also make a general report upon the characteristics of each breed, special reference being made to animals exhibited of superlative merit. They

reports will be embodied with the reports of judges in other groups, and will be highly valuable in the future for reference. Live stock will be divided into two groups, horses being embraced under group 29; dogs, group 30; neat cattle, group 31; sheep, group 32; swine, group 33; and poultry, group 34. Hay and straw will be furnished by the Centennial Commission without charge, and stalls free of entry fee. Entries will remain open till August 1.

Shot Gun and Rifle.

GAME NOW IN SEASON.

Woodcock, *Philohela minor*.
Black-bellied plover or ox-eye, *Squatarola helvetica*.
Ring plover, *Ægialitis semipalmatus*.
Stilt, or long-shanks, *Himantopus nigricollis*.
Red-breasted snipe or dowitcher, *Macrorhamphus griseus*.
Red-backed sandpiper, or ox-bird, *Tringa americana*.
Great marbled godwit, or marlin, *Limosa fedoa*.
Willet, *Totanus semipalmatus*.
Tattler, *Totanus melanoleucus*.
Yellow-shanks, *Totanus flavipes*.

"Bay-birds" generally, including various species of plover, sand-piper, snipe, curlew, oyster-catcher, surf-birds, phalaropes, avocets, etc., coming under the group *Limicolæ* or Shore Birds.

THE CENTENNIAL TROPHY.—The Centennial trophy for the International Rifle Match has been selected. The design was furnished by Tiffany & Co. and represents a bronze shield of the ancient Roman pattern, on the upper side of which is an eagle with expanded wings and underneath a bar similar to what, under the Roman Empire, bore the characters "S. P. Q. R." On this bar will be an appropriate motto, and the centre of the shield will bear a fitting inscription in gold letters surrounded by ornamental scrolls to bear the names of the winners.

REMARKABLE SHOOTING.—We noted last week some remarkable shooting made by Mr. C. A. Hodgman at Morsemere, but his last performance eclipses anything of the kind we have ever heard of. We have now before us a diagram of a target made by Mr. Hodgman at Morsemere on the 23d inst., upon which are fifty bull's-eyes made in fifty consecutive shots at 500 yards. Of these 26 are within an eleven-inch carton.

FLORIDA.—Jacksonville possesses a club known as the William Tell Rifle Club, numbering 30 members, all Germans, none others being admitted to membership. At the last meeting the club prize, a silver badge, was won by Mr. J. D. Witschen.

THE RETURN MATCH.—Tuesday and Wednesday of last week were the days appointed for the second competition for places on the team which is to shoot the return match with the Irish riflemen. The aggregate scores were as follows:—

Name.	Total.	Name.	Total.
Elydenburgh	417	Lamb	371
Fulton	407	Dusenbury	366
Allen	401	Anderson	362
Rathbone	400	Fisher	358
Yale	399	Smyth	351
Davison	389	Hodgman	323
Morse	389	Canfield	304

The number of shots fired at each competition is 20 at 1,000, and 15 each at 900 and 800 yards. The team is to be selected from those making the highest aggregate scores on this and the next competition. Those already chosen for the International team rely on the scores made in the competitions for their present places for positions in this team also.

In the match for the Abereorn cup, shot at Wicklow on the 28th inst., in which the men competing for team places also shot, we have an opportunity of comparing scores, the same number of shots, 20 at 1,000, and 15 at 900 and 800 yards being fired. The best made were as follows:—

Name.	800 yds.	900 yds.	1000 yds.	Total.
Smyth	67	68	75	203
Milner	69	67	72	199
Johnston	61	66	85	212
Fenton	64	64	76	204
Wm. Rigby	66	64	80	210
Joynt	62	63	79	204
John Rigby	56	63	61	180
Wilson	64	62	70	196
Fulton	56	64	88	208

The shooting at the 1,000 yards range appears to have been very good. The competitions were concluded on the 29th with the following result: William Rigby is first, his gross score in two days being 428; Fenton is second by a score of 427. The others made the following gross scores:—

Name.	Total.	Name.	Total.
Fulton	423	John Rigby	390
Johnston	420	Aronstrong	389
Smyth	417	Greenhill	389
Milner	406	Banks	390
Wilson	405	Days	387
Cooper	402	McKenna	382
Mills	402	Thynne	379
Goff	396	Birch	369

John Rigby won the ten-guinea cup presented by Smith for the best score at 1,000 yards.

THE SCOTCH TEAM.—The last competition of the riflemen for places in the Scotch Team for America was held on the 27th ulto. The weather was delightfully fine, but the breeze was fickle. The following are the score made:—

Name.	800 Yd's.	900 Yd's.	1000 Yd's.	Name.	800 Yd's.	900 Yd's.	1000 Yd's.
Clark	58	68	64	Rae	62	54	58
McVittie	66	64	58	Paton	62	63	57
Whitelaw	58	57	68	Thornburn	70	59	46
Boyd	66	63	58	Findlay	65	66	49
Menzies	59	65	62	Fraser	61	60	49
Mitchell	68	63	59	Riddell	57	58	45
Lake	66	63	50	Whyte	59	53	46

During the shooting at the 1,000 yards range the breeze was unfavorable and interfered with the efforts of the marksmen to make first-class scores. Of the gentlemen above named the first ten, having won their place by making the best aggregate scores in the three days' shooting out of four, will constitute the Scotch team for the International match in the United States.

THE IRISH RIFLEMEN.—At Wicklow, on the 30th ulto. Ulster won the All Ireland Challenge Shield, which was competed for by the various Irish clubs. Each man fired twenty shots at 1,000 and 1,100 yards range. Ulster was represented by Wilson, Fulton, Fenton, and Ward. The following is their score:—

Name.	1000 Yards.	1100 Yards.	Name.	1000 Yards.	1100 Yards.
Wilson	71	68	Fenton	90	86
Fulton	84	68	Ward	79	86

Total for Ulster, 632.

Dublin was second, with a gross score of 614. The team comprised Wm. Rigby, Johnson and Cooper. Waterford made 573. The team consisted of Goff, Rea, Greenhill and John Rigby.

CONNECTICUT.—Two matches were shot at the Willowbrook range, June 24th, The first being between Hartford and Manchester teams, each consisting of four shooters. The conditiong were 10 shots each, at 500 yards. The scores were as follows:—

HARTFORDS.		MANCHESTER.	
Name.	Total.	Name.	Total.
C. S. Davidson	45	G. F. Pancock	46
N. Washburo	44	J. T. Wordbridge	44
T. C. Rinney	40	T. F. Plunket	33
F. T. Studley	30	J. Johnson	32
Total	159	Total	155

The Hartford team winning by four points.

The bull's-eye match was next in order, for which there were ten competitors representing Hartford, New Haven, Middletown, Manchester, and New Britain. Conditions of the match being 20 shots each, 10 at 800 and 10 at 1,000. The weather was rather unfavorable. The prize (a badge) was won by C. S. Davidsou, who scored nine bull's-eyes. The next shoot for the badge will take place on Saturday, 8th. In both matches, Messrs. Davidson and Studley used Sharp's rifles of 40 calibre, all the other contestants shooting with the regular Creedmoor rifles. Meetings at the range will take place hereafter on the second and fourth Saturdays of each month.

PIGEON MATCHES.

IOWA.—A shooting tournament was held at Pacific Junction on the 15th ulto. In the first match there were seven entries. Entrance fee $5; 21 yards rise, 80 yards boundary; 60 per cent. to 1st, 30 per cent to 2d, 10 per cent. to 3d; 10 birds shot at from plunge traps. The result was as follows:—

Name.	Total.	Name.	Total.
J. C. Hoffmayr	9	T. Parker	10
R. Mullis	9	John Petty	10
Geo. Holes	10	H. Heywood	8
W. Preston	8		

Tie on 10. Hales, Petty, and Parker, shot off, same rules, 26 yards rise, at 5 birds, and each killed 5. Second tie, same persons, Hales, 4; Parker, 3. Hoffmayr and Mullis ticing on second prize, divided. Preston and Heywood divided third money.

Entrauce fee and rules in the second match same as above:—

Name.	Total.	Name.	Total.
Hales	10	Hoffmayr	10
Petty	8	Jackson	8
Preston	10	Parker	8
Mullis	9	Heywood	7

Ties on 10 shot off at 26 yards rise: Hales, 4; Preston, 5; Hoffmayr, 5. Preston and Hoffmayr divided. Mullis took second prize. Ties on 8, Petty, 4; Parker and Jackson, 3 each.

The third match was shot same distance, rules and per capita as above:—

Name.	Total.	Name.	Total.
Hales	10	Parker	10
Champlin	10		

Double-bird match between Hales, Champlin, Hoffmayr, and Parker, at three pairs, 18 yards rise, 100 yards boundary, resulted as follows:—

Name.	Score.	Total.	Name.	Score.	Total.
Hales	10 10 01	3	Hoffmayr	11 11 10	5
Champlin	11 00 11	4	Parker	11 11 11	6

The judges in the above matches were B. Haskee, Red Oak; John Killer, Council Bluffs. Referee, Mr. Sutphen, of Omaha. The contest in each match was spirited and harmoniously conducted.

SECOND DAY.

The first match on this day was at five pairs, double birds. Entrauce and prizes same as on previous day. 18 yards rise, 100 boundary:—

Name.	Total.	Name.	Total.
J. T. Oliver	7	J. H. McGee	9
J. C. Hoffmayr	7	S. Mills	7
H. C. Champlin	9	J. W. Holdridge	6
R. Mullis	9	J. W. Petty	7
Geo. Hales	8	Thos. H. Parker	8
B. F. Buzzard	9	H. Evans	8

In shooting off ties of nine, Mullis won. Hales and Parker divided second money and Oliver took third.

Second match was at three double and ten single rises. In this match the winner of the first prize took the silver cup:—

Name.	Double.	Single.	Name.	Double.	Single.
H. C. Champlin	11 10 11	8	Petty	11 11 11	10
J. C. Hoffmayr	11 11 10	8	Geo. Hales	11 11 01	8
R. Mullis	01 10 10	7	McGee	11 11 11	10
Buzzard	11 11 10	10	T. Hales	01 01 11	9
Holdridge	10 00 00	7	W. D. Jones	00 10 00	7
Mills	11 10 11	9	McGee, Evans	11 11 11	6
Hall	11 00 11	6	Strait	11 11 11	9
J. T. Oliver	01 11 11	10	White	11 10 11	8
J. S. Smith	10 11 11	7	N. A. Thayer	11 01 00	8
Parker	10 11 11	9			

Ties on 1st prize at 5 single rises at 26 yards rise:—

Name.	Score.	Total.	Name.	Score.	Total.
Petty	1 0 1 0 1	3	McGee	1 0 1 0 1	3

Scoond tie, 5 single birds, 31 yards rise: Petty, 3; McGee, 4, first prize and cup. Ties on second prize, 5 single rises at 26 yards rise: Buzzard, 3; Oliver, 4; Strait, 3. Thos. Parker took third prize, and H. Evans, fourth. Judges, H. B. Williams, of Glenwood, and John Hastee, of Burlington; referee, A. C. Graham, "Initial Point."

E. P. A. P.

SAN FRANCISCO, Cal., June 20th, 1876.

EDITOR FOREST AND STREAM.—

The second regular match of the season of the "Hit or Miss" Shooting Club, took place at the "Seventeen Mile House," on the line of the S. P. R. R. on the 18th inst. A very numerous company assembled to witness the shooting, and all the arrangements in connection with the affair, were carried out in the best manner by the officers of the club, with the assistance of the proprietor of the grounds, Mr Kunicar. A more pleasantly conducted match has not taken place in this locality for years. Considering the strong wind which prevailed, and the fact that the members of the club were handicapped, English style, the shooting may be considered good. The birds were a good lot, and having the wind in their favor, the majority went briskly from the traps. The no-boundary rule was adopted for the first time in California, and worked well; four minutes time for retrieving a bird; 12 pir s each member:—

Yards.			Yards.	
Name.	Total.		Name.	Total.
25 J. Faney	9	26	J. W. Kennedy	11
25 F. Potter	9	22	J. Johnson	6
23 R. Renner	9	26	J. Lymigren	8
23 A. Young	7	24	J. Galbraith	10
33 H. Cameron	9	22	W. H. Kelly	10
24 T. Hart	11	26	G. Gilpatrick	9
26 P. Mullin	11			

Ties on 11 shot off at 3 pairs.

Double birds.	Score.	
T. Hurt	11 10 10	3d prize.
P. Mullin	11 11 10	2d prize.
J. W. Kennedy	11 11 11	1st medal.

Mr. Kennedy winning the medal of the club, making it the third time in four he has contended for it. The medal must be won three times in succession to become the property of the winner. QUAIL.

MISSISSIPPI NOTES.

CORINTH, Miss., June 23d, 1876.

EDITOR FOREST AND STREAM:—

The man that directs the Signal Service Department at Washington—he that heareth the euphonious title of "Old Prob"—seems to have lost his grip on plovial affairs in this part of his dominions altogether, as, in the expressive language of the disconsolate granger, the bottom seems to have dropped out of the clouds, and the fountains of the mighty deep to be broken up. We have had some fearful rains, doing much damage to the growing crops, and we fear destroying many of the young broods of quails and turkeys. Quails promise, if not destroyed by the recent rains, to be more plenty this season than for several past, and a number of broods of young turkeys have been seen in places where none had been raised within the last four or five years. The game law is not being violated here, and I have the same report from different sections of the State.

A lady friend, who lives in, as "Windy Jim" poetically calls it, "Sweet-Conhoma-by-the-river side" told me, a few days since, that a fine young gobbler walked up within twenty yards of her front door. She sold shot, having the fear of the game law before her eyes, she would not shoot it. She informed me that the negroes had greased and laid up their guns until fall. I am certain the game law will result in great good towards the protection and consequent increase of game in this section.

An incident worthy of mention, showing the affection and care, and instinct in averting danger, or reason, os you please, of a bird, occurred here at a fire recently. A mocking-bird had n nest in o box-elder tree, containing three callow young, within fifteen feet of the house that was burned. The tree was charred and almost consumed. A gentleman who had watched the birds during their nesting, and who had been charmed by their songs, said sadly the next morning after the fire, as I passed: "Our friends the mocking-birds 'weot up' last night, most yoong and nll; I suppose the old birds, blinded by the flames, must have flown into the fire;" but before noon he saw the old birds feeding the young in a potatoe patch far enough from the scene of the fire to be out of danger. They had evidently carried their nestlings to this place of safety, and had deposited them all together.

I have just received from J. & W. Tolley, Birmingham, a 10-gauge, 32-inch breech loading gun "National" brand, made to order, with which I expect to make some havoc among the gallos and *ceruses* next fall. Like the other gun they built for me, it is all that I could desire. My friend LeNoir has one same size and weight, "Paragon" brand, and says he would not take five hundred dollars for it; and that reminds me that "Old Pious" gave me a whack once, in FOREST AND STREAM, about going into ecstacies over my other Tolley gun, and sporting an altered muzzle-loader. I'll explain that, Mr. Editor, *inter nos*, between you and me and the lamp-post. When I go into the field with such men as Jeems the Pious, to save my reputation as a shootist I have to take a gun along that will make a pattern as big as a circus ring.

In mentioning the sportsmen's club with the name of FOREST AND STREAM, in a recent issue, you neglected to say anything of the FOREST AND STREAM shooting of Corinth, Miss. To prove that we have done something individually, if not as an organization. I have only to refer you to the fact that a game law has, as you are aware, been passed in our State. GUYON.

FLANNEL SHOT CARTRIDGES.

MORGANTOWN, N. C., June 22d, 1876.

EDITOR FOREST AND STREAM:—

I thought the "flannel shot cartridge" question defunct, till "Wing Shot," in your issue of June 1st, gave his opinion, which, though altogether favorable, would have been of more value if he had tried them much oftener than three times.

In last week's paper E. L. Harris steps to the front with his testimony in favor of the flannel choke bore system. My experience was just the reverse from that of both these gentlemen. After reading what wonders the F. S. C. would accomplish, I made a few to try, and started out bent on destruction. The first shot delighted me; it was at a duck, and the distance was about seventy yards—in fact, it seemed so long that no expectation of killing, but not being able to lessen it, concluded to give him a blezzard myhow. To my astonishment I killed that mallard bird as dead as Jephtha's daughter, indeed a little too dead, for I suspected the shot of bunching. I carie home and carefully made a dozen cartridges of different material, viz.: thin flannuel cloth and buckskin carefully sewed over my loading-stick, so as necessarily to fit the inside of cartridge case. I fastened the ends securely, turned the cartridge case well down, made some targets, and proceeded to the field, where I patiently tried them at each distance. I would be likely to need them for, and I found them to bunch sometimes and fill the target, but more frequently to do no better than loose shot. As for their being cheap, just try making a few, and say what it is worth. I should charge one dollar each (orders not solicited).

With regard to the Kay shot concentrator, it suits me exactly. I have only tried them at a target, but the pattern they give is so excellent and uniform that I look forward to next season's shooting with increased pleasure, intending to use them in the left barrel when birds get up wild. Perhaps Mr. Harris put them in his cases wrong end up.

G. H. MORAN.

TO MAKE A GUN SPREAD.

GRANBY, Conn., June 24th, 1876.

EDITOR FOREST AND STREAM:—

Wishing to make my gun (which is a choke-bore) scatter more I loaded some shells the following way: 3¼ drs. powder, I Eley's black-edged wad, ½ oz. shot, then card-board wad, then shot, &c., using wad over every ½ oz. shot, then card-board wad, then shot, &c., using wad over every thirty inches at ten yards, which is about double the distribution my muzzle-loader gave at same distance, loaded the ordinary way. I would like to have sportsmen try the above method and report the result, which I think will be satisfactory. A. ELMORE.

—A Shakopee, Scott County, Minnesota, correspondent says prairie chickens will be plenty next season.

—Mr. Hiram Cranston, formerly proprietor of the New York Hotel, has again resumed the control of the house. Mr. Cranston made one fortune in the same locality, and we doubt not will so well meet the wants of his friends that another awaits him.

Rational Pastimes.

BASE BALL.

THE PROFESSIONAL ARENA.—The second week's play of the western tour of the eastern nines ended July 1st with the appended record:—

Chicago vs. Athletic	13 to 14
Chicago vs. Athletic	19 to 3
Chicago vs. Athletic	18 to 9
Total	50 — 26
St. Louis vs. Mutual	7 to 1
St. Louis vs. Mutual	8 to 0
Total	15 — 1
Louisville vs. Boston	3 to 5
Louisville vs. Boston	8 to 6
Louisville vs. Boston	2 to 10
Total	13 — 21
Hartford vs. Cincinnati	5 to 2
Hartford vs. Cincinnati	13 to 6
Total	18 — 8

Rain stopped Saturday's games in St. Louis and Cincinnati, the former with a score of 5 to 1 in favor of the Mutuals at the end of the fourth innings, and the latter with the score at 3 to 1 in favor of Hartford in the third innings. The record of the League pennant contests to July 2d is as follows:—

	Athletic.	Boston.	Chicago.	Cincinnati.	Hartford.	Louisville.	Mutual.	St. Louis.	Games won.	Games played.
Athletic		1	1	3	0	1	3	0	9	29
Boston	3		0	6	0	2	3	1	15	30
Chicago	5	2		4	2	4	5	3	25	30
Cincinnati	0	0	0		1	1	0	2	4	29
Hartford	3	4	1	4		5	3	3	23	27
Louisville	2	4	0	3	1		1	1	12	30
Mutual	1	1	1	3	2	1		1	10	28
St. Louis	6	2	2	2	0	3	4		19	28
Games lost	20	15	5	25	5	18	19	10	116	332
Game drawn	1	0	0	0	1	2	0	0	0	4

SCOTTISH GAMES AT SCHUTZEN PARK.—The ninth annual games of the Caledonian Club of Hudson County, New Jersey, came off at Schutzen Park on the Fourth. Most of the best known Scottish athletes were present, and the competitions were as a rule keenly contested. The games were not so well attended as in former years, but in other respects were up to the average. The following is the

Prize List.

Putting Light Stone.—1. John Anderson, Newark, 45ft. 7½in.; 2. Wm. Robertson, 45ft.; 3. A. McKay, 42ft. 3in.

Standing Jump.—1. A. McKay, 10ft. 2in.; 2. A. C. Reid, 9ft. 9¼in.; 3. Andrew Rennie, 9ft. 6¼in.

Running Jump.—1. A. C. Reid, 20ft. 9¼in.; 2. A. Rennie, 20ft. 2in.; 3. D. S. Keiller, 19ft. 3in.

Short Race.—1. A. C. Reid; 2. A. Rennie; 3. J. McLaren.

Tossing the Caber.—1. A. McKay, 43ft. 5½in.; 2. M. E. Moore, 39ft. 8in.; 3. R. Williamson, 39ft. 3½in.

Highland Fling.—1. James Aitchison; 2. John West; 3. W. Robertson.

Throwing Heavy Hammer.—1. A. McKay, 87ft. 1in.; 2. John Anderson, 83ft. 6in.; 3. Wm. Robertson, 78ft. 7in.

Running High Leap.—1. John West, 5ft. 7in.; 2. W. Robertson, 5ft. 6in.; 3. A. C. Reid, 5ft. 4in.

Hitch and Kick.—1. A. C. Reid, 9ft. 8in.; 2. John West, 9ft. 5in.; 3. James Corsair, 9ft. 3in.

One Mile Walk.—1. Thos. McEwan; 2. W. J. Hume; 3. T. Anges.

Boys' Race.—1. James Stewart; 2. J. McLaren; 3. Ad. Smith.

Putting the Heavy Stone.—1. John Anderson, 36ft. 8in.; 2. A. McKay, 34ft. 9in.; 3. W. Robertson, 32ft. 1in.

Hurdle Race.—1. A. C. Reid; 2. A. Tasker; 3. John West.

Vaulting with Pole.—1. W. Robertson, 9ft. 7in.; 2. F. Duke, 9ft. 3in.; 3. W. E. Moore, 9ft.

Three Legged Race.—1. A. C. Reid, and John McLaren; 2. M. E. Moore, and Wm. Robertson; 3. T. Angus, and H. Rae.

Hop Step and Jump.—1. A. C. Reid, 38ft.; 2. A. Tasker, 37ft. 7in.; 3. A. Muir, 36ft. One Mile Race.—1. T. B. Irving; 2. W. J. Hume; 3. Bennett Greig.

Broadsword Dance.—1. W. Summers; 2. Jas. Aitchison; 3. P. Reid.

Bagpipe Playing.—1. Angus Rankin; 2. Charles Grant; 3. P. Reid.

Long Race (about ¾ mile).—1. A. C. Reid; 2. T. B. Irving; 3. J. McLaren.

Throwing Light Hammer.—1. A. McKay, 99ft. 8½in.; 2. John Anderson, 95ft. 8½in.; 3. A. Rennie, 86ft. 9in.

Sack Race.—1. W. Robertson; 2. D. B. Fleming; 3. H. Rae.

Old Men's Race.—1. John Henry; 2. A. Fleming; 3. G. Hamilton.

Quoits.—1. James McLaren; 2. John McLaren.

BICYCLING EXTRAORDINARY.—Mr. H. Stanley Thorpe recently rode a bicycle from London to York, a distance of one hundred and ninety-five miles, in twenty-two and a half hours.

All persons interested in the protection of the fish at Greenwood Lake, and continued restocking of the lake with fish, are invited to meet at the Brandon House, head of the lake, for the purpose of forming an association in this interest, on Saturday, July 22d, at 3 o'clock P. M. By order of an informal meeting of sportsmen, WM. O. McDOWELL, Sec., 110 Broadway, Room 6.

Northern Railway of Canada and Collingwood Lake Superior Line.

ONLY FIRST-CLASS ROUTE TO THE BEAUTIFUL INLAND LAKES OF CANADA AND LAKE SUPERIOR.

Three express trains daily north from Toronto. Steamers leave Collingwood every Thursday at 6 P. M., on arrival of steamboat express, leaving Toronto at noon.

Lake Conchiching

AND THE

Lakes of Muskoka

Are the coolest and most delightful Summer watering places in Northern Canada. Tourists proceeding down the St. Lawrence can make a pleasant detour from Toronto to Conchiching in five hours on express train with Drawing Room Coaches, thus visiting the most charming of the chain of Lakes.

Excursion Tickets

At greatly reduced rates during months of July, August and September; may be had from COOK, SON & JENKINS, 261 Broadway, New York and Centennial Grounds, Philadelphia.

"FISHING LINE."

Brook Trout and Grayling Fisheries

OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equalled, in the great abundance and variety of fish contained.

Brook Trout abound in the streams, and the famous American Grayling is found only in these waters

Brook Trout Season opens May 1st.
Grayling season opens June 1st.
Black Bass, Pike, Pickerel, and Muscalonge are also found in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and stop-over privileges granted to tourists and sportsmen; also on and after July 1st Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. Our Tourist's Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, Send to Forest and Stream office, or address

J. H. PAGE, G. P. & T. A.,
may4 4m Grand Rapids, Mich.

FOR NEW HAVEN, HARTFORD, Springfield, White Mountains, Montreal and intermediate points. The new and elegant steamer C. H. Northam leaves Pier No. 25, East River, daily (Sundays excepted) at 3, and Twenty-third street, East River, at 3:15 P. M. A passenger train will be in waiting on the wharf at New Haven and leave for Springfield and way stations on arrival of the boat.

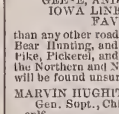
NIGHT LINE.—The Continental leaves New York at 11 P. M., connecting with Passenger train in waiting on wharf at New Haven, leaving at 5:15 A. M. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Excursion to New Haven and return, $1.50. Apply at General Office, on the pier, or to RICHARD PECK, General Agent. my25 tf

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road, radiating from Chicago. Like the fingers in a man's hand, its lines reach to all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof, with another line it passes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Negaunee and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching from Elroy, it runs to and through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and, *via* the Illinois Central, reaches Warren, Galina and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction, to Council Bluffs and Omaha. This last named is the "GREAT TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Cheyenne, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and to Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento, San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:



THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GREESE, AND BRANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by any in the West.

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Runs *slowly* and very clean, shooting remarkably close, and with *great penetration.* For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12½ and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

88 Wall Street, New York.

Feb 10-1y **70 Wall Street, New York.**

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The *strongest* and *cleanest* Powder made. Nos. 1 to 7, packed *only* in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breechloading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6½ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.G., FF.G., and FFF.G., the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6½ lbs., and in canisters of 1 lb. and ½ lb.

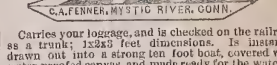
All of the above give high velocities and less resistan than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

26 Murray St., N. Y.



Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

BUY IT Vanity Fair.

It is shaved from the best Natural Leaf, for Meerschaum and Cigarettes. Does not make the tongue sore. Sample on receipt of 20 cents. Highest award, Vienna, 1873. Send for circular.
WM. S. KIMBALL & CO.,
PEERLESS TOBACCO WORKS, Rochester, N. Y.

From Seth Green, Supt. N. Y. State Fisheries.
I find Vanity Fair to be the best article of tobacco adapted to the wants of the sportsman. Have used your tobaccos for many years, and know them all to be first-class.

For Sportsmen.
A trusty friend, in weariness or trouble; a solid resource in Winter and rough weather, is a sweet pipe with Vanity Fair. Best dealers have it.

From A. B. Lamberton, Rochester.
Having smoked your tobacco, Vanity Fair, by the camp fire and by the hearth, I believe it in point of fragrance and taste superior to all brands known to me. Being in search of a tobacco that would not fire the tongue and mouth, I was made acquainted with your Vanity Fair, and found it to be the *ne plus ultra* of natural leaf.

For Cigarettes.
A cigarette is an interlude to the serious habit; a graceful make-believe for spare hours. For cigarettes Vanity Fair has no equal. Best dealers have it.

From Forest and Stream, N. Y.
We have received from Messrs. Kimball & Co., of Rochester, some choice specimens of their celebrated Vanity Fair tobacco in neat metal cases holding a pound each; and, after most thorough trial, do not hesitate to concede to it all the good qualities which its manufacturers claim for it. It is a most superior article, and a great comfort to discriminating smokers

BOW-FACING ROWING GEAR.

A REVOLUTION IN BOATING.

This rowing gear is an invention which allows the rower to face forward instead of backward, pulling in the same manner as with the ordinary oars. The oarsman faces the direction in which he goes, and rows faster and more easily than with any other oar. The stroke is longer than with ordinary oars. The oars can be closed and more easily than with any other oar. The stroke is longer than with ordinary oars. The oars can be closed in or out of the way without detaching them from the gunwale. The boatman makes no more effort in steering than in directing his course while walking. These oars can be attached to and detached from the boat very quickly, and they can be closed up in a convenient form for carrying. Can be attached to any boat, and is especially adapted to hunting, fishing, and all kinds of pleasure boating. Address, during Centennial, "Hunter's Camp" of Forest and Stream, Centennial Branch P. O., Philadelphia.

Paper and Metallic Shells

FOR

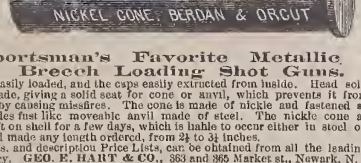
Breech Loading Shot Guns,

Manufactured by the

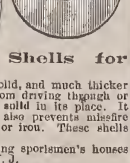
UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.



THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.



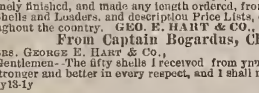
PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any Imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dec23 tf

Hart's Sportsman's Favorite Metallic Shells for Breech Loading Shot Guns.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid, and much thicker an any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or bringing away, thereby causing misfires. The cone is made of nickle and fastened solid in its place. It neither rusts or corrodes fust like moveable anvil made of steel. The nickle cone also prevents misfire when cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are finely finished, and made any length ordered, from 2¼ to 3¼ inches.



Shells and loaders, and description Price Lists, can be obtained from all the leading sportsmen's houses throughout the country. GEO. E. HART & CO., 363 and 365 Market st., Newark, N. J.

From Captain Bogardus, Champion Wing Shot of America.

MESSRS. GEORGE E. HART & CO.,

Gentlemen—The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly,

TESTIMONIALS.

From Hon. J. T. Headley, the Historian, Author of "Adirondack, or Life in the Woods," &c.

It is admirably written, and has just enough of humor, sentiment, and description of scenery mixed, to make it delightful. The illustrations are well chosen and very effective, while the instructions respecting routes, localities, distances, outfits, &c., embrace everything that can be desired. Taking it all in all, it is the most complete book that has been published on the Adirondacks, not excepting even my own—a compliment that I trust will be properly appreciated for its extraordinary disinterestedness.

From Albert B. Street, the Poet, and Author of "Woods and Waters," "The Indian Pass," &c.

I think it is the *best* work on the forest that has appeared—superior in word-painting to Murray's, and full of wood-pictures and vivid scenes of camp-life. We realize that we are in the forest, are living with you in the scenes described, and that the trees are waving and the waters flowing over and by us. This, I think, the true test of a good book, impressing its reality and distinctive life on the mind. As a "Guide Book," it is most creditable and valuable. Indeed, it is the *only* thing of the kind that yet been published—the very thing that has been so long wanted and waited for. It must have cost you intense application and labor. You may well be content that you have produced a good book.

From Benson J. Lossing, the Historian.

I have read those portions descriptive of the places which came under my personal observation, with the deepest interest, and most cheerfully testify to the general accuracy of your pictures as I recall impressions made of them at the dates of my visits. I regard your "Descriptive Guide" and the "Appendix" as a most useful—nay, indispensable, manual for tourists to that wonderful Wilderness. A tour in that region is eminently a practical matter, and for that reason I regard your "Guide" as an important, useful, and timely publication.

McBride Flies,

The Standard Flies for American Waters.

These flies are imitations of American insects, or combination of colors, that an experience of forty years has proved most successful. Parties supplied with casting lines and artificial flies for Pennsylvania trout streams, Adirondacks, the Maine Woods, Lake Superior, Thousand Islands, Canadian, and other waters. Anglers not acquainted with the nomenclature of these flies, by mentioning the locality where they intend fishing, will have the varieties best suited to those waters sent to them. Flies copied from any natural insect or pattern desired. SARA J. McBRIDE, (Successor to John McBride) Mumford, Monroe county, N. Y.

THE NEW

BOSTON

SHOOTING SUIT,

Manufactured only by

G. W. SIMMONS & SON,

Boston, Mass.

We offer this season an entirely new design of WATER-PROOF SHOOTING SUIT (made from extra quality duck), in the preparation of which we have been assisted by the advice and suggestions of our best resident sportsmen.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, the arm holes ventilated, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at $13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloons.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the *Golden Rule* (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skilfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, water-proof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Waist Measure, Height, Breast Measure, Length of Sleeve, Size of Head.

W. H. HOLABIRD

Would most respectfully announce to his patrons and friends that he is prepared to make

Shooting and Fishing Suits

at the above prices. The ten dollar suit is better made than any competitor can offer for the same money. My original design having been appropriated by other manufacturers, I have been compelled to make many changes in the arrangement of pockets, &c., for which I have to thank the fraternity at large for suggestions. I believe that I have the

BEST SHOOTING AND FISHING COATS IN THE WORLD,

and respectfully solicit your orders. I send my new illustrated Catalogue, 16 pages, free on application.

Dealers will find it to their advantage to handle my goods. They are better known and more highly esteemed than any other make.

THE

PAPER STEM PIPE.

Just the Thing for Home and Camp Use.

Supplies a want which smokers have long felt—a pipe which shall give simply the taste and odor of tobacco smoke. This pipe never accumulates rank smelling liquid in stem or bowl, but is always clean and sweet. The bowl and mouthpiece are permanent, but the stem is of porous paper, to be laid aside after a few days' use and a new one fitted. Extra stems accompany each pipe. The price of extra stems, when not furnished with the pipe, is as follows: Four and a half and seven inches, &c.; twelve inches, 15c. Sold by pipe and cigar dealers generally, or a complete sample sent by mail for $1 by

CHAMPION GUNS OF ENGLAND.

PAPE'S

Unrivalled Sporting Guns.

Stand unequalled in every contest. Their performance at the London Trials of 1875 beats the records of any maker in the world.

1875. 12-Gauge, Choke Boring.

Maker of Gun.	Exhibitor.
1st—Greener	Greener.
2d—Pape	Davidson.
3d—Pape	Pape.

Out of a class of 68 guns, 3 out of the 6 best were made by Pape. The Greener gun was protested against on the spot for having its score false counted, the fact proven there, and afterwards confirmed by same gun being shot for two days per week for six weeks in succession, when its average score only took 24th place, its very best score being greatly below the scores of the best six guns.

1875. 12-Gauge, Old Sporting Bore.

Maker of Gun.	Exhibitor.
1st—Pape	Davidson.
2d—Pape	Davidson.

1875. Long Range, 60 yards, Choke Bores.

1st—Pape ..... Davidson

60 yards, Long Range, Sporting Boring.

1st—Pape ..... Davidson

Those champion Long Range guns, only 7 pound weight, with a charge of 3¼ dr. to 1⅛ oz. shot, beat the best 8 bore Greener gun at 60 yards; weight, 15 lbs.; 6 drachms and 2¼ oz. shot.

1875. The Sportsman's Sub. Cup, valued at £45, was also awarded to W. R. Pape, for the original invention of choke boring. Winner of the London Gun Trials of 1858, 1859, 1866. Address

THE GREAT

London Gun Trial,

1875.

W. W. GREENER'S

Far-Killing Prize Guns.

Winner of Silver Cup, value 40 guineas. Winner in Class 1, for 8 and 10 bores. Winner in Class 4, for 20 bores. Winner in the Wear and Tear Trials, July, 1875. 2,500 shots fired without deterioration.

W. W. G. is the only maker who has made an average pattern of 214 shots in a 30-inch circle, at 40 yards, with a 12-bore gun, at any public trial either in England or America.

I have just received a consignment of these guns, and shall offer to individual sportsmen, for a short time, an opportunity to secure one of these celebrated guns at a popular price, viz: $75, gold; extra for extreme close shooting, $10. This will probably be the last chance to secure one of these guns at these very low figures. All grades and styles in stock or imported to order.

Attention is also called to my stock of guns, by W. & C. Scott & Sons, which includes all their latest improvements. No old style guns in stock.

Sole New York Agent for Holabird's Hunting and Fishing Suits. Trade supplied.

---

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET,
LIVERPOOL.

FOREST AND STREAM

Terms, Five Dollars a Year. Ten Cents a Copy.

NEW YORK, THURSDAY, JULY 13, 1876.

Volume 6, Number 23. 17 Chatham St., City Hall Sqr.)

For Forest and Stream.

HALT!

A REST for the toilers, a respite from strife,
From the burden and heat of the battle of life;
The bugles are sounding the "reveille" again,
Bivouac and recruit for another campaign.

Honest industry wisely may guide through the years;
By plowing and sowing the harvest appears:
But the reapers their nooning may pass in the shade,
The rest fairly earned by the labor they paid

Let the bow be unbent from the warp and the strain;
Call a halt for the nerves and the world-weary brain;
Step down from the treadmill, its jostle and noise,
And away to the woodland like true-hearted boys.

"Gradgrind" may admonish of "keeping the shop,"
Begrudging the oil till the worn engine stop;
Be it ours to enliven the moil of the day,
And stroll in the green fields that border the way.

Let the Sybarites crumple their loaves as they will;
Not for them are the sheaves that the garners do fill—
Not for such the wild glen where the brawling brook runs,
Whence the true "alma mater" is calling her sons.

Away to the windward among the old hills,
Where the pine and the balsam are arching the rills;
Where the sweet fern heads over the cool, dripping springs,
And the spice-laden breezes shed life from their wings.

T. W. A.

For Forest and Stream.

Sporting in the Colonial Times.

THE SPORTSMEN OF THE PERIOD—"THE BELVOIR MEET.

IT was the Christmas of 1769. The Ancient Dominion never before was in such a prosperous condition. Money, bills of exchange, and crisp bank notes, poured in from England, in barter for the planter's wheat and tobacco. All trades were in a flourishing state, and not even a muttering of the coming storm was heard. Williamsburg, then the capital city, was in the very zenith of its glory, and fairly glittered with its varied crowd of cavaliers, officers in brilliant costume, and the array of beauty and fashion. All the noted men of the Colony were in the town, the House of Burgess had begun its session, and Gov. Spottswood had formally opened his Vice Royal court, and signalized the occasion by a series of magnificent fêtes and entertainments. The army and navy of his Majesty's service, scholars from abroad, nobles from France, and gentlemen from the Continent combined to grace and honor the occasion with their presence. Balls and parties, theatricals, and suppers, the grand reception of Gov. Spottswood, drills of the troops, visiting, matinées, calls, dinner and rides filled the day at Williamsburg, whilst at night one could stroll with a tender bewitching Colonial maiden, go to the student's ball, could dance after the music of the colored band, led by old Jerry—and dance as wildly as did the ancient Dutch burghers after the pied piper of of Hamelin, or could don his court dress, and present himself at the Governor's mansion, and tread the stately "minuet de la cour," with his Excellency's fair lady herself.

With all these pleasures at his command, it must have been a potent charm indeed, that could allure the cavaliers from this scene of enchantment. Yet a large party of the pick of the men, (in a society term at least) coolly ignoring the temptations of the Capital, turned their backs upon the old town at the very height of the season, and went to "Belvoir." Fairfax, Earl of Cameron, had thrown open wide his hospitable doors, bade his friends come, eat, drink, and be merry; and they, knowing well the hearty enjoyment in store for them, flocked to the beautiful old place. Besides this there was another reason stronger, and more potent in the hearts of these men than the love of fine wine, good tables, and the minuet, and that was the "annual meet" at Belvoir. Ah! that was a thing that few could resist. Well they knew that no pleasure in town could compensate them for the loss of the splendid display, exciting rivalry and dashing riding after the Belvoir hounds. All those gentlemen who could get away from Williamsburgh, left for his Lordship's mansion several days before Christmas, when there was to be a big dinner followed by a grand ball in the evening, and two days after the hunts were to begin. So sending their packs of dogs in charge of the master, to the rendezvous at Belvoir, the cocked-hat gentry proceeded leisurely to the hall, many of them taking their family coaches, with the quarterings and crest of the family painted on the door, whilst the gentlemen rode their own favorite coursers. Soon the old hall was crowded with guests, and Belvoir was in its brightest colors.

His Lordship, throwing aside his rough backwoods dress and his backwoods manner, appeared in a costume befitting his rank and station, and did the duties of the host with all the ceremonious politeness and urbanity that he could so well assume when occasion required. I have beside me an engraving of the gentleman of that year 1776, and what a dress! The homeliest man would ship in such costume. Velvet coat with gold buttons and elegantly embroidered; satin vest, worked in elaborate designs, from which appeared dainty ruffles of lace; shorts reaching to the knee and slashed with gold; white silk stockings tied at the knee with a garter; long pointed shoes with jeweled buckles;—such was the dress, rich and costly. Over the right shoulder hung an embossed belt to which was attached a slender rapier in a bright steel scabbard. The three-cornered cocked-hat, generally carried under the arm when not in use, completed the outfit, and made a gallant and striking figure, so utterly unlike our modern dress, which confounds all distinction between a gentleman and a waiter. I will not describe the Christmas festivities at Belvoir, though strongly tempted to do so. I could detail *con amore* the splendid dinner, the old mahogany table groaning under the good things; I could speak of the old Dresden china, the massive family plate, the huge Christmas turkey, the smoking haunch of venison, and the Virginia cured hams, as sweet as sugar. Wild fowl from the Chesapeake, fish from Hog Island inlet, rare old wines from famous cellars, and the ancient Cameron punch-bowl, of massive silver, always filled with that generous liquor on festive occasions. And of the Christmas ball, where the proudest, the fairest and best of the colonists met; where satin rustled, velvet trailed, and brocade swept over the polished floor; where pearls gleamed, rubies shone, diamonds sparkled, and jewels rich and rare, catching the light of the silver lamps, flashed everywhere. I could tell of men, famous in the annals of their country, who surrendered that night, captured by the bright, passionate, yet shy and tender eyes of the Colonial dames. Especially would I like to draw a portrait of sweet Mary Cary, who won the heart of Washington at Belvoir, and won it so well that he really never cared for any other woman, and cherished her memory as long as life lasted; it grieved her gentle heart that she could not respond to the young surveyor's passion, for she was engaged to young Ned Ambler.

At last the festivities of the hall were over, and the ladies had all left. It was a frosty, winter morning, just such a one as would cause the scent to lie well, or, as the old couplet had it:—

"A southerly wind, and a cloudy sky,
Gave promise of a hunting morning."

The whole place was in an uproar, the different kennels were being brought out on the lawn and the sportsmen were mustering, each wearing his colors, and mounted on his crack horse. There were over fifty gentlemen at the Meet and a description of some of the most noted will be proper. We will begin with young George Washington. Young George was a protegé of Lord Fairfax, who took a great interest in the lad; and gave him his first lift in the world, in the way of a commission to survey his Lordship's farm, a neat piece of land of some hundred or so miles in extent, and which comprised over a score of counties. The youth was elated at the piece of work, and well he might be. It not only would fill his purse, but give him a name and distinction in his profession. It was a pleasant task enough in lower Virginia, with every door open to him, but when he followed the track of the compass further west into the mountains it was really a hard life he led, and a rough set he was thrown among. Tradition tells us that he was his own cook, having no spit but a forked stick, no plate but a large chip; roaming over the spurs and ridges of the Alleghany and Blue Ridge, and along the banks of the Shenandoah, spending a large portion of his time in shooting and fishing; often straying with the Indians or with uncouth emigrants who could not speak English. Rarely sleeping in a bed, holding a bear skin a splendid couch, living in the woods and forests, this striping surveyor passed his time with no companions but his illiterate associates, performing his duties all unconscious of the grandeur of his future. Washington accomplished the task so well that the Earl was more than satisfied with the result of his labors; and recognizing also in the young man those great traits of character for which he was noted in after years, Fairfax conceived a great friendship for his surveyor, which was cordially returned, and lasted through many years. The two houses of the Earl were always to Washington as so many homes, and his room was always ready for him, when ever he had time to stop; it was at Belvoir that he met and courted Mistress Mary Cary. He tried his best to win her, but got his *congé*. It made him very bitter against women for some time, and it had the effect at least of making him the most reckless of all riders after the hounds. He also trod exactly in his illustrious patron's footsteps in regard to the women. There are a dozen men living in Fairfax county now, who proudly but unthinkingly boast that they are directly——but what is the use of reviving old scandals. They might not be true after all. But he rode fair with the hounds, at any rate, and shirked not fence, nor craned at a water-jump. He was, like all other riders, wore the regulation top-boot, buck-skin breeches, square coat, and cocked hat. He was mounted on a superb stallion, "Prince Charles," the gift of the Earl. Prince Charles' sire was Rupert, whose dam was Nell Gwin, a famous racer belonging to the princely Buckingham, the boon companion of the Merry Monarch. Washington used the light English saddle and Pelham bit. He was an ardent and enthusiastic fox hunter, as was Lord Fairfax himself. I have already so fully described his Lordship that I will only add that he was mounted on a horse of immense size and power, the only one in his stable that could carry his weight all through a long run. One peculiarity about the Earl's costume must not be omitted; that was his hunting horn. It was of pure silver, in shape nearly a perfect curve, and about as round and long as a barrel hoop—the master of the hounds always wore this style of horn, but of course made of brass. They gave a deeper and incomparably more mellow note than the little cow horns now in use.

Next to his Lordship was young Byrd from Westover, a celebrated country seat on the James River, which the Marquis de Chastellux, who paid a lengthened visit there in 1782, said surpassed all the seats in the country round about. Young Byrd brought his pack with him, and they were said to be the crack hounds of the James River region, and numbered some twenty couples.

One most noticeable figure in the group is Major Bullet, who knows, and is known by, everybody in the colonies, and is a favorite with all the boys and girls for miles around; a singular paradox loved by the children and old women, but feared by the men. A roaring blade is the Major, who loves the wine cup, the chase, and delights to hear the dice rattle. He is about thirty-five years of age, tall, slender, and graceful, with soft brown eyes, a sweet voice, and classic face; not a desperate looking fellow, though the Major was in the army, and was noted for his cool bravery and determined nerve. He was not a bully by any means, nor even quarrelsome, but was quick and fiery tempered, a devout believer in the "code" as a means of righting difficulties, and consequently the most famous duelist in Virginia. A crack shot and accomplished swordsman, it made little difference to him at the hostile

meeting whether the saw-handles or the slender rapier was the weapon chosen. He always "brought his man," but by singular good luck, or the perfectiou of skill, he never killed his opponent, only putting him *hors du combat*. In those days nearly every gentleman had been "out," and in the dear public's eyes it was a fine feather in their caps. Major Bullet greatly distinguished himself in the war with the Indians, and the tale of his gallant exploits, and desperate daring is a matter of history. This son of Mars, was something of a dandy, however, and his coat of red contrasted admirably with his spotless white buck-skin breeches and patent-leather top-boots. It is needless to say, that the Major was a bold rider.

Another gentleman present who it might be said, lived on his horse, was Mann Page, Esquire, a strikingly aristocratic looking man, with portly figure and clear cut face; a man of great *bonhomie* whose deep tones and rich mellow laughter showed that he knew little or cared little for the troubles of life. Mr. Page was, with the exception of the Earl, probably the richest man in the colony. He had a plantation of eight thousand acres in Fredcrick county, called "Pagdand;" another piece of ground in Prince William county, of ten thousand acres, also called "Pagelland;" four thousand more in Spottsylvania called "Glenpage;" one thousand in King William county called "Pampadike" two thousand in Hanover, two thousand in James City, and a score of other farms of a thousand acres or so apiece. His slaves were numbered by hundreds, and many a time when out riding he would meet grinning darkeys who would tell him that they belonged to him, a fact that he would never have known unless reminded of, for he rarely troubled himself with overlooking his numerous plantations. His overseer would report once a month, and that was sufficient. It was wiser by far to employ one's self than to work all the time, he said. The maxim of the that rough-riding, hard-drinking gentry, must have been "Drink and be merry, for to-morrow we die."

There was another famous characte present—one who gives us a blessing when born, and one who throws a stone in our grave when dead; who by a few words, changes the whole tenor of our lives, and makes Mr. Caudle's and Rip Van Winkles of the wisest of us; one who few men like and all women adore. I mean the Parson, as he was called then. This jovial person was a great contrast to the "preacher" of to-day. The church was one of the professions that was open to younger sons, and they entered it without any special taste, desire, or preference. Indeed, a sermon preached on Sunday was all they were expected to do besides officiating at weddings and funerals. They loved their liquor and pastimes better than the prayer books and the church bells. This sounds strange, but it is so. How we would stare to see the Rev. Dismal Horror, and Mr. Goodwords, flying over a hurdle, clearing with a ringing Ballooh a twenty-foot stream, or shouting a jovial hunting refrain. The old chronicles of Virginia say that "the easy-going race" of the clergy in the colony was intemperate, for they found it best to go with the planters in everything as their very bread depended on their keeping on good terms with their patrons. They thus had to be very particular how they preached against any of the vices that any great man of the vestry had. So they did in tome, as the Romans do—and headed all the pleasures and sports. If the truth is told, they "preached on Sunday, rode on Monday, got drunk on Sunday," and so on through the nursery song.

Ned Ambler, a fine young fellow, unusually brilliant in mind and handsome in person, was also on the lawn with his pack of dogs. Aylett of Westmoreland; young Selden, who after the revolution was considered the handsomest man in the State; Mr. Cary, Charles Lewis, Pat Lockheart, McCarty, Carter, Waller, Piersons, and others—all good men and true, who are trained, like the Spartan youths, to ride and to shoot, if not to speak the truth, were there. Their lines were cast in pleasant places, and each day was made to contribute something to their enjoyment. I know that there is many a modern Timon who will deliver his philippic against the luxury, the selfishness, and the inordinate pride of those spoiled darlings of fortune; but look on the reverse side of the picture, and watch them when that dark, fearful, period that tried men's souls came, and you see that those dandified youths fought like the Paladins of old, and founded a mighty republic. It is your pet thoroughbred leading a life of idleness, that we trust for a long gallop when life is at stake, and it is this dandy blooded horse which runs the sixteen-mile race, and not the hard worked cart horse, or the common roadster. So this "rocked hat gentry," haughty, overbearing, luxurious, and unthinkingly selfish in the time of peace and plenty, when the ordeal came, met it with no bending, no breaking, no flinching, and whether with Lewis in the mountains, with Braddock in the forests, or with Marion in the swamps, did their part so well, that impartial history has enshrined their memories as heroes, and they live again with us in painted portrait or sculpured stone. It was a very pleasant life to them, and their world was very fond of them, as it always is when a man's existence is perfectly smooth. It was the tour on the continent, the winter at Williamsburg, dinner at the Rawleigh tavern, and dinner unapproachable everywhere. The solid silver plate, the sweepstakes of the course, yachting in the Chesapeak Bay, shooting over their dogs in October, the glorious "Meet" at Christmas, when the whole land was given up to devilry and love-making, with no drawbacks to worry the mind or dull the spirits.

But the hunt begins. The master of the hounds approaches Lord Fairfax and whispers in his ear. Putting his silver horn to his lips, his Lordship blow a blast so loud and clear, that it echoes through the woodlands, and makes every hound give tongue. Waving his hand to the gentlemen to follow, he gallops off, and behind him canter the riders, their costumes mingling in different hues and gleaming against the back ground of the forest. The hounds are uncoupled and spread out like a fan, dashing through fen and field, searching for a trail. And as the pack scatters over hill and dale one deep bay announces that the scent is hit off and the chase has begun.

ALEXANDER HUNTER.

ADIRONDACK EXPERIENCES.

SEEKING FOR REST.

I HAVE finished my fishing trip, and to-morrow will find me on my way out of the wilderness; and I look forward to the forty-mile stage ride before me as the "hard road over Jordan," leading to happy resting places beyond. I'm not sorry to go out. A month's hard work has worn out the fever, and I feel quite reconciled to the sacrifice I shall be compelled to make when I get out of the woods—sacrifices real and fancied—among the first the pure bracing air that we breathe up here among the mountains nearly two thousand feet above the sea; the freedom from restraint of every kind, toilette, regular hours, letters to answer, and business cares; the ravenous appetite, the unbroken slumber under a blanket, the feeling of rest and don't-care-a-bit-itiveness that one acquires so readily, when freed from all conventional restraints, he becomes, with nature for his companion, as near to the natural man as his degree of love for his companion can transform him. I came into this mountain home with three grand objects in view:—

To obtain rest for a brain tired by long and unremitting application to abstruse studies in (to me) unknown fields.

To obtain from the mountain air daily exercise and complete change of every habit, a new hold on the health that was evidently deserting me.

And to catch, eat, and talk trout.

I have been successful in all of my quests, but each success has been qualified by some drawbacks.

Others are coming after me. Some have already come. Four fair-faced boys, evidently just from their colleges, neat, tidy, natty in costume, with endless traps, proclaiming wealth, a setter and a pointer held in leash by nice brass chains, breech-loading rifles carrying balls as big as peas, fish rods of split bamboo of fabulous lightness, left the stage to-day to *go into the woods to camp out*. What joys are before them! How happy they will be camped out in a log shanty on the banks of some lake or river, devoured by flies, their dogs miserable and of no use at this season, when their guides, if they take guides (and God help them if they don't) won't let them kill the partridge, and starve its brood, and when the old spotted hound, heavy and homely by the camp-fire, but sure to the trail till the deer takes water, or he, the relentless pursuer, lies weak and starving upon the not to be deserted track, growls ominously upon the petted fireside favorites, and perhaps for lack of other food devours the new comer. Well, it's no use moralizing. When those boys get home, and perhaps read this, they'll look back to the days when, glad of food, they contented themselves with chubs and bull-heads in lieu of the speckled beauties their fancy had taught them were to be obtained at little cost. For their sench and for that of other amateurs, I will transcribe a bit of poetical advice, quite popular on the lakes, as it combines music, good advice as to the method of handling and disposing of the ordiuary class of fish caught, and some information as to their relative values. It is sung by your guide as you are slowly trolling along, watching the pole-tips and wishing for a strike, and is sung to the air of the chorus of that once popular melody, which "has gone where the good nigger (songs) go;" and which refrain is this, (I wish I knew more of it):—

"When you get a white cat, shave him, shave him,
When you get a black cat,
Skin him to the tail."

I am not responsible for the profanity of this ditty; guides are not preachers.

WHEN YOU GO A FISHING.

When you catch a *lake trout*, save him, save him;
Keel him up steady, and gaff him in the boat
When you hook a *brook trout*, save him, save him;
When you get a big one its time to wet your throat.

When you catch a *shiner*, gang him, gang him;
Save him for your gang hooks, and put him in your pail.
When you catch a big *chub*, dang him, dang him.
He pulls like a laker, and you'll think you've got a whale.

When you catch a *bullhead*, skin him, skin him;
Look out for his horns, and skin him if you can.
When you catch a *sunfish*, sling him, sling him;
He's scales, bones and spikes, and isn't worth a d——n.

When you see a bull'frog, jerk him, jerk him;
Put the worm to his nose, then jerk him with your hook.
When you see a "venuzon," shoot him, shoot him;
When you shoot a venson, send me some to cook.

I'll paint another picture for my young friends to contemplate:

As I said, I came for rest. Imagine the amount I got when "shantied out," lying five of us abreast on the hard ground, with balsam leaves making one place soft, while balsam limbs made another rugged; the night hot, rainy, and calm; the "glorious camp fire" of large logs roasting one's steaming boots, which you dare not take off for fear of never getting them on again; your head snug up against the rear log, from which spring the rafters, which, covered with spruce bark, protect you from wet *when it don't rain;* legs and back aching from your unwonted toil; hands tinghing from punkie bites; nerves wincing as the tuneful mosquito makes sweet melody near your ears, and you strike wildly, forgetting the log, as well as the certainty that you will not hit the enemy, and repenting your forgetfulness; pure, heaven-sent water trickling in little rills through the crevices, in your bark canopy, and moistening and cooling your fevered skin, even through the heavy flannel shirt and coarse trousers that are doing duty as night-gown. As I began, I repeat: Imagine the rest—mine and of the miseries—although neither were imaginary.

To be sure we had resources. An old pipe steadily and persistently smoked, a fresh load lighted from the old coals, throughout every minute of the long hours due to sleep, would, in a measure, assist the tar and oil, with which, at brief intervals—time being called by the mosquitos—you anuoint freely the exposed cuticle. But your own tobacco won't do; in the fumes of my mixed Lone Jack and Vanity Fair, which rose in fantastic wreaths between my tired eyes and the glowing flame, the wicked mosquitos hovered, like flies in a sun-glade, and seemed to relish the fragrant incense no less than myself. 'Twas only when I filled with rank old cavendish that, as my tongue and throat gave way, so did the enemy.

"How dear to my heart was my room at Dan Rudeses,
As lugiorious retreat brought it back to my view"

Wheu rag carpet, wash-bowl and pitcher, good bed, and closed windows ceased to be necessaries, and were elevated into luxuries. How different reality is from even a true description of it! No doubt, if I should live to go through it, and write my experience in a nice little book, or in your columns, and head it "Six Weeks in a Shanty; or Camp Life in the Wilderness," lots of your readers, or mine, would envy me as a man who, in spite of the proverb, "Man never is, but always to be blest," (*is* that a proverb?) has been blessed. Before I'd earn that title, though, I'd risk the other thing. In spite of that rough part of my experience, I did get the rest—not physically, for that I had had too much of, but mentally—with no care or cause of anxiety, farther than the hope that the morrow would prove a "good day," and if it did'nt I could'nt help it, and need not worry about means of prevention or cure. I had but to make sure that I forgot none of my individual tackle when at early dawn I left my comfortable bed, for the lake. My guide looked out for the rest. He woke me up—for although, when by my side in the shanty, he incurred my resentment by quietly sleeping throughout the night when I was denied the blessing—yet the morning hour did for him what flies, punkies, and mosquitos, endeavored in vain to accomplish, and started him from his slumbers, at any hour I had named. And there was little to forget. My coffee was ready, and my rod, reel, line, and spoon, were all in one. All I needed was the fish, and I went for them, with the pleasures of hope on my morning's walk to the Landing, those of memory full oft when I returned thinking of the "good strikes" I had had and missed.

There are pleasant inns in the woods. After a long ride on a fair road through dense forests, where you can hardly believe that you are in the heart of the Empire State, a turn discloses a blue lake, with many acres of cleared land, dotted with comfortable little houses. Amid them towers a three story building of wood, painted white, verandahs surrounding two stories, a pleasant little oval park with shady maples in front, and on the porch, rising to welcome the tired traveler, as the stage drawn by "Reuhe Willard's" lusty team dashes up with that last spurt peculiar to the true stage driver, and which he always has left to come in with, "Steve" Andrews, the ever obliging host appears. Conducted at once to a pleasant well-furnished room, you forget almost that you are in the woods; but a glance from one window at the beautiful lake, from another at the dense and apparently impenetrable primeval, quickly convinces you; and when at table you indulge, beyond your ideas of your capacity, in fresh trout, cream, mountain strawberries, &c., and when in season, venison, partridges and woodcock, and after your pipe, retire to a bed where you need the blankets which for so many hot nights in the city you had dispensed with, and sleep an unbroken sleep, then you get the rest you came for, and with it the health you had thought gone forever. In my next I will tell you all about the way of getting to this resting place, what we do here, what sport we have, and give you a summary of the other good places in the neighborhood.

PISCO.

Pisco Lake, June 28th, 1876.

For Forest and Stream.

CAMPING UNDER THE PALMETTOS.

WE were at Enterprise, Florida, on the St Johns River. Our party consisted of three gentlemen and two ladies. We had talked some time about camping, and at last determined to start the next morning. We procured two good boatmen with their boats, and embarked our "traps," such as guns, cartridges, flour, frying pan, sun-shades, books, gloves, rubber boots, and many more things requisite for the expedition. We finally started with three persons in one boat and four in the other. It was glorious as we rowed across Lake Monroe on the way down the river, where the best hunting and fishing was. We soon reached the narrow stream with trees overhanging it, and long gray moss dipping gracefully to the light breeze which waved it backward and forward in the sun. It looked like fairy land.

Now the excitement begins. Far ahead we see an alligator sunning himself; quietly we approach, but just as we get near enough to shoot, he gently slides off into the water, and a few bubbles show that he is too far out of reach to think of getting him, so on we go, eagerly looking out for more. Paroquets, ducks, cranes, red-winged black-birds, and buzzards fly through the trees and over the swamps. We shoot as many as come near enough, but cannot stop long, as our camping ground is thirty miles from Enterprise. Some distance down the river we met the steamer, and had to row into the bushes to let it pass. After we had started again a large flock of paroquets flew over, screaming at the top of their voices.

It was getting dark when we pulled up at the very pretty place which was to be our camp-ground, and it was some time before we could find anything to make a fire with, but at last came across some dry reeds, which made a bright blaze, and we soon found wood. Presently the other party came, and we set to work to build a palmetto hut, which was, to say the least, rural. One of the men cut forked sticks and stuck them in the ground; then he laid the oars across them, and on the top and sides tied palmetto. It fell down once, but was soon re-built, and then we began to think of supper. What a meal it was! A little self-raising flour mixed with water and put in a pan, which was placed on the fire and allowed to remain a few minutes. When it was taken off the bread, or rather the warm dough, was put in a tin plate, and the pan was filled with frying fish. Coffee, prepared with condensed milk, completed the supper, which we sat around on the ground, too hungry to think of dirt or mosquitoes, of both of which we had an abundance. While we were thus busy we saw a boat approaching, and a stranger landed, who politely informed us that we were on his ground at a place called Blue Springs, one of the most beautiful spots on the St. Johns River; and that he had come over to send us all away, as he had promised a gentleman who camped there every year not to let any one else use the ground; but as there were ladies in the party we were quite welcome. Presently two of his daughters came over, and wanted us to spend the night at their house, but we said "No indeed! We came to rough it." Fresh wood was put on the fire, and we all sat round, telling stories—"stories" in both senses of the word. Such feats in shooting and fishing! At last we all got sleepy, and our visitors left, telling us to take care for snakes.

After spreading grey moss on the ground in the hut, and laying a rubber blanket on the top of it, we all turned in—the ladies in the hut and the gentlemen around the fire.

At sunrise we were awake, but our eyes were blinded by mosquitoes, which were so thick inside of the mosquito net that we killed them by hundreds. One of my friends told me that they were big enough to shoot on the wing, and that he had been trying it; but I think it was only in sleep. I had two hundred and fifteen bites on my two hands.

As soon as we had had breakfast, which was the same as the supper, with the addition of a little pork, we took a row on the beautiful Blue Springs, which is about half a mile in length, with large trees on each side. The water is very clear, and we saw the bottom distinctly; quantities of fish were swimming about, from the smallest minnows to the largest bass. Near the mouth we saw what looked like a large fish swimming near the surface, and one of my friends shot it, and we discovered that one fish had failed in trying to swallow another almost as large as himself, and when we saw them they were both dying. After this excitement half the party started up the river snipe shooting, and we went down stream after an alligator that we heard blowing like a bull. We saw him, but did not kill him, and went on shooting birds of different kinds, till at last we saw a coon curled up in a tree sound asleep. We shot him, but he ran away. Further on we saw a large moccasin snake swimming towards us, but did not shoot him. Turning the boat, we had rowed half-way back to camp when we met a man paddling towards us, who told us that a party of ladies wanted to see us, and the sound of voices made us hurry on to camp, where we recognized three friends from Enterprise, who had driven over to see us. We had a very nice time together, although they laughed at our housekeeping, but soon left us, as they had a hard drive of ten miles before them.

The next day, after the boat had been packed as before described, with the addition of some orange canes and some gray moss, we had a hard pull up the river. We got some alligators and came up to the rest of our party, who were shooting snipe, and stopped half an hour to watch them. It was very exciting. They had to shoot right and left with great rapidity, as a quantity of birds were started up at every step. At last we got tired, and with a few parting words "about mosquitoes," we hurried on, and after a pull of thirty miles, entered Lake Monroe, which, unfortunately, was very rough. Being in a flat-bottomed boat the waves splashed in, and by the time we reached the landing wet was not a large enough word to describe us. We were therefore glad to have a bright fire and a good big supper, after which we felt ready to go through it again. Then we had to tell of our adventures and paint our camp in glowing colors; but at last could go to bed, and so good night! TIP TOP.

Fish Culture.

CANADIAN SALMON.—A great improvement has been made in the Canadian fisheries during the last ten years. By a better system of inspection, the trout streams have been kept free from impurities, and unlawful fishing has diminished; whilst by the more extensive propagation of salmon, principally through the enterprise of Mr. S. Wilmot, of Newcastle, Ont., the lakes and streams are becoming more plentifully supplied with fish. As a pleasing result of this, fish is no longer an expensive luxury in the market for the gratification of the wealthy, but is now sold at moderate prices, and within the reach of all; and by reason of more extensive sales there is an increased revenue to the country.

In some respects, however, other improvements are needed, and to one of these special attention is now being devoted. It is suggested by the Commissioners of Fisheries that the salmon stands in different rivers are too numerous, and that these should be reduced either by lessening the number of licenses or by associating together the owners of different stands, and granting joint licenses for a reduced number of places. This would be a saving of expense to the fishermen, and would result in an increase of fish in the rivers.

In the Province of Quebec the plan has been tried on a limited scale, and with marked results. Since 1868 the salmon fishery there has yielded an increase of nearly three hundred per cent. As an illustration, it is said that in the river Moisie there were in 1858 not less than 15,000 fathoms of nets, which secured only 75,000 lbs of fish; whereas, in 1875 there were only 2,500 fathoms of nets, and yet the yield was 204,000 lbs. of fish. This astounding increase was due entirely to better inspection and more discriminate fishing. In Ontario similar facts may be quoted; and in many places where, a few years ago, fish were hardly to be caught they are now so plentiful as to be almost thrown away.

The inference is that it pays to take care of fisheries. In reality Canada possesses a great source of wealth in rivers and lakes. Every year their value is increasing; and the more prudently they are guarded the more they will yield to the substance of the people and the revenue of the Government.

FISH CULTURE IN CANADA.—Advices to the Fisheries Department state that the greatest success has attended the distribution of young salmon bred at the hatching-houses of Restigouche, Tadousac, Gaspe, and Miramichi. Six hundred thousand young fish were placed in the rivers and streams of the maritime provinces. Mr. Wilmot, in charge of the Government hatching-houses at Sandwich and Newcastle, Ontario, has placed in the waters of the Detroit river no less than 10,000,000 white-fish fry and vivified eggs, which were liberated early this spring.

SPARE THE FINGERLINGS.—Our contemporary the Rutland, Vermont, *Herald*, in an article deploring the rapid diminution in the number of trout in Vermont waters touches upon the real cause of the evil in the following paragraph. After reciting the other agencies at work, such as the taking of trout at improper times and by improper methods, and the effects of sawmills and dams, it says:—

"These three causes of the depletion of our mountain streams, fatal as they are, are as nothing compared to another; an every day evil, but also susceptible of an every day remedy if we choose to apply it. The subject of this article was suggested by an account in one of our morning exchanges of the wonderful success of Mr. So and So, who had taken, in one day's fishing, one hundred and seventy-four trout, weighing eleven pounds. Now if this person had taken two more fish, his entire catch would have averaged just one ounce each. *Not one of these trout ever had a chance to try to propagate its species.* At the most they could not have been over two years old, and it is well known that yearling trout do not deposit spawn. These trout, granting them to have been two years old, would have deposited their first eggs this coming November if they had been given the opportunity to do so. But it was not to be. The slaughter of the innocents had been consummated and it is too late to talk about them. There was no law to prevent it and it is very unlikely that the lucky (?) fisherman ever had it occur to his mind that the question of the size of the catch had anything to do with the future supply, or that there was any impropriety in taking these small trout. And what was it all for? Was it for sport? The very men who bring home these baskets of fingerlings will always say that it is not sport. Are they fit for food? Well, tastes differ. They are trout, and trout are a delicacy, but for us such fish when brought to table are simply a mixture of corn meal and pork fat with just enough back bone to hold the morsel together, flavorless and free from any suspicion of the gamey delicious flavor of a full-fed fish of one quarter or one-half a pound weight. Is not this "killing the goose that lays the golden egg" with a vengeance? Is it not worse, is it not killing the goose before she has a chance to lay any kind of an egg? Is it not clear that this wickedly wasteful course, if persisted in, will inevitably lead to extermination? Illegal and improper modes of fishing have done their share and saw mills have done much more to destroy our fisheries, but it is the destruction of the younglings that has been the main cause of the present poverty of our once fruitful streams. What can be done to remedy the evil? There is no law to say that trout of one size may be taken and another may not. There remains then only the appeal to the good sense and the generous feeling of every good sportsman to spare the babes. Let us give them one year at least in which they may make the effort to reproduce their kinds and then we shall receive in the not remote future large dividends to repay us for our present self-denial.

TROUT IN WELLS.—Few people are aware of the quantity of dirt that falls into a well and increases the impurity of the water. The filth comes in the form of worms, flies, bugs, grasshoppers, and every thing in the insect tribe that flies or crawls about the yard. Nine-tenths of this insect filth would be eaten by a good sized trout, and when put in a well, a trout requires but little attention, other than to give him a few bread crumbs in winter, and flies and grasshoppers in summer, for in eating habits a trout is as voracious as a crow, or, like him, can subsist on a very small quantity of food. In my well a common brook trout had nothing to eat save what fell into the well by accident, and a few grasshoppers in summer, for five years; yet in the aquarium, a trout six inches long will regularly eat two or three minnows a day, and when first taken from the brook, he will eat double that amount of minnows two inches long. Yet in the well tended aquarium this speckled member of the finny tribe excels the trout in his native haunts as much as does the high grade or full blood Shorthorn, the native steer. In fact, I think this is a truthful comparison, and any one who is familiar with the trout in the shady pool of sparkling water, and in the aquarium will endorse this assertion.

Although a trout has a very large mouth, and "can eat his bigness" for breakfast, dinner, and supper, I would not put a smaller than a six inch trout in a well, and only one unless great care can be exercised to feed them regularly, for the larger will devour the smaller.

Considerable pleasure can be derived from seeing a trout in the well come to the surface of the water, and sometimes quite out of the water to take a fly or grasshopper thrown to him.—*Exchange.*

SALMON CULTURE IN NOVA SCOTIA.

HALIFAX, July 1st, 1875.

EDITOR FOREST AND STREAM:—

I noticed in the FOREST AND STREAM of June 22d, a paragraph about the distribution of salmon fry from the fish breeding establishment at Bedford, near this city, which is slightly inaccurate as regards the number placed in River Philip, Cumberland Co. It should have been 140,000 instead of 10,000. I think, Mr. Wilmot deserves great credit for his endeavors to replenish our rivers with salmon, and in order that all possible publicity should be given the successful result of his labors, I trust that you will make the correction. I may say that Mr. Wilmot did not succeed in getting to Gold river with the 10,000 intended for that place, owing to the roughness of the road. But fearing that he might lose them on the way, he very wisely put them into Indian and Ingram rivers, St. Margaret's Bay; thus saving them for the country, and replenishing two rivers in which they are much required. I send you a paper containing an account of some convictions for illegally setting nets, from which you will see that a sharp look out is kept for offenders. FITZ COCHRAN.

Secretary Game and Inland Protective Society.

—A writer in *Nature* says that he has often noticed during spring and summer that flowers appear to follow the spectrum from the blue of the wild hyacinth to the deep scarlet of summer flowers. During autumn he noticed the same gradations in colors; and he asks whether the actinic rays of the sun are not in greater force during spring, and whether these chemical rays are not those which revivify seeds and plants after their winter's hibernation?

—In one tank of Dr. Dohrn's aquarium at Naples three great cuttle-fishes lived with three lobsters. At length a fourth lobster of great size and strength was put in, and was instantly attacked by the largest cuttle-fish, and a desperate fight ensued. The contest being renewed day after day, the lobster was finally withdrawn and placed in an adjoining tank. But this was not the end of the matter. The cuttle-fish, bent on massacreing his enemy, left the water, climbed over the partition separating him from the lobster, and renewed his assaults. He gained the victory this time, and, when discovered, was found to have slain the lobster and literally torn it in halves. This conduct of the cephalopod in following his enemy seems to indicate an intelligence unusual to them.

Natural History.

DADDY-LONG-LEGS.

DADDY-LONG-LEGS is in a general way objectionable, but he is particularly so at the present time in and near London. A considerable number of grass plots in places of public resort are just now absolutely destitute of grass, and present a most deplorable appearance. There can be no doubt the proximate cause of this state of things is the dark, sausage-like grub of Daddy-long-legs (the crane-fly, *Tipula oleracea*). This insect belongs to the *Diptera*, the order of flies, and is classified near the gnats and gad-flies. Ignorant persons tear them in the adult state although they are perfectly harmless; but in their larval stage they are fearful pests. This larva has a peculiar taste for grass-turf, it is partial also to lettuce, strawberries, and, indeed, will eat almost any kitchen garden vegetables, and has a fancy for a feast in a seed-bed, where it will thin the rows of seedling plants with a severity worthy of a better cause. The extent to which the pest has spread in some districts of London is almost past belief. Some spots in that large and useful open space, London Fields, are literally alive with them, especially around the foot of the gas lamps; the new garden in Leicester square is desolated of grass; the turf on the Thames Embankment gardens is unusually thin, and the yards of private houses are destitute everywhere. A few years ago the turf of Blackheath forest was much injured by them. Yet this is only in the cities. "As soon," says the *Gardner's Magazine*, with an application equally good for American readers, "as we escape from the town we find the grass turf everywhere in good condition, or if not so, at least not seriously injured by this ravager. What makes the difference? The answer to this question will come by observation. Wherever song birds are fairly plentiful grass thrives, and where they are scarce daddy-long-legs has it all his own way, and nibbles among the grass just above the roots; or as the gardners say, "between wind and water." It is true that in most town localities sparrows abound, but these active foragers rarely hunt for earth grubs, whereas the thrush, the blackbird, and the whole tribe of warblers that come here for the summer season, subsist chiefly on insects, and from daybreak to dusk pursue their useful calling as supplementary gardeners. We cannot, of course, compel song birds to locate themselves in towns, but we are bound in the interest of one of the principal charms of English rural scenery —that is, fresh green turf—to protect them to the utmost of our power, and happily the well planted suburbs of most of our great towns are plentifully stocked with these delightful and useful creatures. It will be found that wherever song birds abound the keeping of grass turf is a comparatively easy matter, but wherever they happen to be scarce the *Tipula* is a frequent and powerful enemy. The moral is obvious, but it does not go far."

HISTORY OF THE PRAIRIE-DOG.

THE prairie-dog (*Cynomys ludovicianus*) is a very amusing little rodent animal, much resembling the marmot, about the size of our small hare, of a light silvery gray color, body of medium proportions, head, legs, toes, long nails much resembling the woodchuck's, tail short and waggish, and motions always very sprightly. Like the marmot of the higher regions of the Alps and Pyrenees, he inhabits only the more elevated prairies of the great West. Northerly, he is believed to extend up to, if not beyond, the Missouri River. Westerly, he reaches well up to the Rocky Mountains; southerly, he is found as far as San Saba county, Central Texas, and is pushing his boundaries. Easterly, his limit is about 98½ West Longitude—at least I have never found him east of this line on any of our marches from the Gulf of Mexico to the Kansas River. It is worthy of especial notice that this easterly line of their habitations (98½°) is the natural line separating the immense grain-producing regions of the east from the rich and almost boundless pastoral lands o' the west. Beyond it no grain can be raised without irrigation, for the rains that fall are untimely for crops; and the little dogs stand like sentinels for 1,000 miles along this line, warning the emigrant farmer, and inviting the stock-raiser. The country he inhabits is the land of the sweetest and most nutritious grasses, more than 100 species of which are natural to Texas alone. It is a high region having a mean elevation of 2,000 feet. It is dry and remarkably healthful. Since they are spread over such a vast region it is evident that they must migrate; but the manner of their doing so is not understood. Do they spread singly or in colonies? and do they make any seasonal movements? Some of our army officers ought to be able to tell us. They do not hibernate in Texas, for I have seen them out and lively as a cricket in mid-winter. But I think he must hibernate in the cold and snowy regions of the northern plains. Information is wanted on this point, and also to fix more definitely his extreme northern and western limits; the time of bearing his young, and the number produced at one time.

The prairie dog burrows in the ground like the woodchuck, and is found in communities of various sizes scattered over the broad region. His aggregate numbers are countless, and his pre-emptive rights indisputable. The Comanche tradition is: "In-gias always find plat-lie dog here; may-be so, just like In-gin, he come up out of de ground right here." They are decidedly social in all their habits, and their places of living are called "prairie-dog towns." In some towns there may not be over 50 or 100 dogs, while in others they number thousands, and their burrows, a rod or so apart, may be continuous for miles. They are wise engineers, and generally select for their

towns, with great apparent care, a piece of high, dry, level, hard and gravelly land, covered with short grass, and without any visible reference to water. From this it is generally believed, and this is my opinion, that they go without water entirely, as a drink.* Nor can they receive much, if any, from dews, for in some places where they live dew rarely occurs, and the same is true of rains. I have sometimes seen their towns so completely stripped of all grasses and vegetation, their only food, as to quite resemble an arid brick-yard, and hence no dew could form. They are sure prognosticators of the weather, and when the whole colony is seen out, chattering and busily engaged in hauling up with their feet the earth around their holes, and packing it down with their noses, then look out for rain, for there are no "probabilities" written on their bulletin. They are as fond of barking as a hen of cackling, and all the colony are ready to join in the chorus. Their bark is short, quick, and backing, and resembles, I think, more nearly that of a squirrel than of a small dog, which Washington Irving compares it to. Their motions are always very quick, and while at play they are so frolicsome, sprightly, and rapid, as to be really amusing.

They live apparently on the grass and plants immediately around their dwellings, and always appear sleek, fat, and lively, but how they manage to accomplish this in some of their arid towns is a mystery. They rarely venture out in the day time beyond the dwellings of their nearest neighbors, or in quest of food, and I have never heard it said that they leave their homes at night, hence they can procure no food outside the limits of their towns. In selecting hard and compact soils for their burrows they exhibit a remarkable instinct of self-preservation closely allied to reason. If the ground were soft the wolves, panthers, wild cats, and other carnivorous animals would unearth them for food. They are rarely taken by surprise, for like excellent soldiers, they are very vigilant about the camp. When one becomes alarmed, he immediately communicates it by a change of voice, and then quickly dives for his hole. The rest pass the watchword, and in almost an instant all are out of sight. Thus vigilance and activity are their means of defense; and yet they may be shot without much difficulty by watching and waiting very quietly. The Indians eat them, and their meat is very good. The prairie-dog's desire, in fair weather, or if invaded, to leave his burrow is so great that he soon pops out his head, stops to carefully reconnoiter, and if all appears safe he quickly mounts his watch-tower, stands straight up on his haunches, and begins to work his side wag his tail, bark, and exhort his neighbors most vociferously. This seems to be one of his chief delights; the cars of his neighbors are wide open, and in a little while all join in the general pow-wow. No, not all for some are seen apparently making a trial of their speed in a lively foot race, others in groups, seem engaged in the sprightly game of "leap-frog," and others still, like little children, seem fully taken up in playing "tag." Each apparently strives to out-do the other, and oh! how hard they work. From hole to hole they go and back again, quick as thought, with their bodies bending, legs flying, and tails bobbing. All around is cheerful excitement, no enemy is believed to be near, all fears have vanished, and joy supreme pervades the town. But, bang! bang! ! Where are they? Silence answers. Such is the magical change of the moment, and the sportsman is left alone to enjoy his laugh at these funny little creatures. But if we wait only a little while, their impatience and curiosity will draw them forth again to renew their former pastimes. And now a few words about their enemies.

The little burrowing owl, or "prairie screech owl" (*Spheotyto cunicularia*), is always found in their towns. It inhabits the burrows of the dog, and hence some writers have supposed that both live harmoniously together, but this inference is incorrect. The owl is, in fact, but an intruder and enemy of the dog, whose vacant houses in the absence of hollow trees he seizes, and uses for his own convenience and protection. From these he sallies forth when hungry, pounces upon the unsuspecting young dog, carries him into his hole, and gobbles him down; he picks the dead also, and, it is believed, enters the burrows of the living and carries away the young. Bereaved of their young it is presumable that the old ones desert their dwellings and the roober may enter into the possesion of a new mansion. Like the dog, the owl is usually seen looking out of the entrance of his hole, or standing erect upon the earth at hand, and in both situations, he looks as grave and sedate as a deacon, and as wise as a learned barrister. In either position at a little distance off, he so nearly resembles the dog that he is often shot in his stead.

The rattlesnake is sometimes found an inhabitant of their holes, and hence some writers have counted him also as one of the "happy family." This, beyond a doubt in my mind, is an error. The snake, like the owl, is an interloper, a vile, subtle intruder upon the premises of the dog. Yea, worse, he is a loathsome robber, and deliberate murderer. When hungry, he slowly obtrudes his cold and slimy coil into their holes, seizes and gulps down their young, and with his poisonous fangs, strikes the parents with certain death. He now slowly makes his coil in this new mansion, and being well filled, goes quietly to sleep. And here he is found, and this is the part he plays. No! both the owl and the snake are alike enemies to the dog, and both deserve death at his hands.

Several other animals, especially the panther and coyote prey upon the prairie dogs. These may many times be seen lurking around their towns. In January, 1855, while on a mounted scout from Fort Belknap, Texas, to Fort Chadbourne, in pursuit of a party of "Me-good-Injins," who had stolen some commissary beeves from the post, I had an opportunity of watching a panther trying to get his dinner off prairie-dogs. He would wait quietly till one appeared, and then make a spring. But time after time, the dogs were too quick for him and sank into their safe holes, just before the panther touched the spot where they had sat. A few trials of this sort so alarmed the whole town that none of the little fellow would venture out; and just as the disgusted panther was departing, Captain Oldscout shot him dead.

The following observations which fell under my eyes are full of interest here. They have never been given. In 1853 the officers at Fort Washita, Indian country, had one of these dogs as a pet, and a very amusing pet he was. This was in the summer, and the officers built a ten-foot pen of boards about three feet high, adjoining the "caravansery" or assembly room, and put the little pet into it. This gave us a fine opportunity to watch and study his habits. No sooner had he been put into his yard, than he surveyed it well, then fixing on the best place for his burrow, he began to open the ground, and the way he made his little scrapers and the dirt fly was very amusing. In a little while he had his hole dug, and the next thing was to smooth it off, and arrange the dirt around the hole systematically. This was soon done, when he pounced out and in, and was as sprighty and gay as a lark. We had also the dry skin of a large snake, skinned with the rattles left on it. This gave us a good opportunity to test, as we did, the dog in his love or fear of the snake. We found by shaking the skin and rattles, that he would no sooner catch the sound, than away he would go for his hole, and become so alarmed that, contrary to his custom, be would sometimes remain a whole day out of sight. And when he did come out it was with evident great fear. This experiment was also tried when he could see no motion, and with the same results. Sometimes when feeling the want of a good laugh I would take down the skin carefully, and give it a sly rattle to see "Jack" bound for his hole; the laugh always came. These experiments conclusively show that the dog by the instinct of self-preservation, or otherwise, has the greatest natural dread of the snake, and that he will flee from his presence at all times, as from a consuming fire. Again, whenever Jack was seen busily engaged hauling in the earth with his feet around his hole, and packing it hard with his nose, no matter if the day was as clear as a crystal, then we had unerring notice of a coming storm, which soon followed. So conspicuous was this that all firmly believed this little dog to be an instinctive and sure prophet of the weather. He is the barometer of the plains; and, query, may not "Old Prob's" get some of his remarkable predictions through him.

He was a small eater. We threw him in a handful of grass occasionally, and he throve well, and appeared contented and happy. My impression, however, from memory is, that he was never known to bark while in captivity, but of this, to my regret, I am not certain, for it constitutes a very interesting point and feature in his history. He makes a clean and beautiful pet, but I am unable to say that he can be domesticated, so as to be handled, and to remain around one's premises. I think him untamable.

MAJ. H. W. MERRILL.

New Rochelle, N. Y.

*In one of the earlier volumes of the *American Naturalist* there was an article discussing this question, in which it was stated that pet prairie dogs lap up water often and eagerly.—ED.

—In the archæological collection made last year by Alex. Agassiz, at Pasagua, on the coast of Southern Peru, were several parts of human skeletons and a remarkable lot of human hair. This collection of hair shows not only the peculiar mode of braiding, but also the fact that hair other than that belonging naturally to the head was worn to a great extent in the form of "switches" and "rats."

TEXAN ORNITHOLOGY.

GAINSVILLE, Cook Co., Texas, June 26th, 1876.

EDITOR FOREST AND STREAM:—

Following are some notes upon the migration and nesting of birds in this locality between April 24th and June 5th, which may be worth recording:—

April 24th.—To-day I shot a male orchard oriole (*Icterus spurius*, var. *affinis*), and a yellow-breasted chat. I also took a nest, with a full set of eggs, of the blue-gray gnat catcher, and found two other nests with sets incomplete. All three nests were on horizontal limbs, and the outside of the nests being constructed of moss, they very much resembled knots in the wood. Black capped chickadees are incubating. I secured specimens of the summer red-bird and indigo-bird on their first arrival.

April 26th.—Took a nest of the blue-gray gnatcatcher with a cow-bird's egg in it. The Carolina wren is incubating.

April 28th.—The doves are laying, and young black-capped chickadees are on the wing.

May 2d.—Swallow-tailed and Mississippi kites migrating.

May 4th.—Crow black-birds incubating. Shot a male Mississippi kite in perfect plumage. The stomach contained wasps, bugs and flies.

May 6th.—Lark finches incubating, and red-birds nesting. The gaudy painted finch (*Cyanospiza ciris*) has appeared.

May 8th.—Black-throated bunting (*Euspiza americana*) nesting.

May 9th.—The hooded oriole (*Icterus cucullatus*) is now nesting. This bird is very plentiful, and is not so shy as the orchard oriole. The swallow-tailed flycatchers (*Milvulus forficatus*) are also nesting.

May 10th.—Meadow larks nesting.

May 11th.—Swallow-tailed kites and Mississippi kites are to be seen almost daily. The mocking-birds are incubating.

May 17th.—Yellow-billed cockoos (known in the South as "rain crows") are nesting. Each nest contains one chick and two eggs.

May 23d.—Took a nest of the lark finch with a cow-bird's egg in it. The yellow-winged sparrow is incubating.

May 25th.—King-birds nesting.

June 1st.—Saw a red-tailed hawk. Do they breed here?

June 5th.—Saw the largest flock of swallow-tailed kites to-day that I have seen during the spring migration. There were about 20. In August, and, I think, sometimes in July, these kites are to be seen here on their return with their young.

G. H. RAGSDALE.

ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN, JUNE 22 TO JULY 10.—Three woodchucks (*Arctomys monax*), one presented by Wm. R. Striery, of Philadelphia, one by McCadden & Sloan, of Philadelphia, and one by Mr. Goldsmith, of Camden, N. J.; three barn owls (*Strix flammea*) and one chaparral cock (*Geococcyx californianus*), purchased; two screech owls (*Scops asio*), presented by Frank Mowrey, Philadelphia; twenty-seven horned toads (*Phrynosoma cornuta*), presented—one by Mrs. Paschall, of Paschallville, Pennsylvania; two peafowls (*Pavo cristatus*), bred in the garden; one red fox (*Vulpes fulvus*), presented by W. W. Whilden, Philadelphia; one green monkey (*Cercopithecus callitrichus*); one white-throated capuchin (*Cebus hypoleucus*); one Himalayan bear (*Ursus tibetanus*); one black Iguana (*Metopoceros cornutus*) and one albino squirrel (*Sciurus carolinensis*), purchased; two wild geese (*Branta canadensis*), presented by Maxwell's Point Ducking Club; five Daubenton's curassows (*Crax Daubentoni*); seven trumpeters (*Psophia crepitans*); twelve love-birds; one gallinule; two red-breasted guans (*P. grayi*); three parrakeets; one crow-black-bird (*Quiscalus purpureus*); one marmoset (*Hapale jacchus*); two maccaque monkeys (*Macacus cynomolgus*); two pig-tailed monkeys (*M. nemestrinus*), presented; one screech owl (*Scops asio*), and one red bellied terrapin (*Emys rubriventris*), presented; two grey foxes (*Vulpes virginianus*), presented by A. R. McIlenry, Jr., Philadelphia.

ARTHUR E. BROWN, Superintendent.

ARRIVALS AT THE CENTRAL PARK MENAGERIE, JUNE 24 TO JULY 8.—One sea-dog (*Zalophus Gillespiei*); one green turtle (*Chelonia mydas*), presented by E. G. Blackford, New York city; one woodcock (*Philohela minor*), captured in this city, and presented by Louis Mendel; seven peafowls (*Pavo cristatus*), bred in the Menagerie.

W. A. CONKLIN, Director.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

THE COUNTESS OF DUFFERIN.—The yacht which is to sail against the Madeline for the famous "Americus" cup arrived at Halifax on the 7th instant, and sailed again for this port on Saturday the 8th. The first of the three matches was to have been sailed on Monday of this week, but owing to the impracticability of the Countess being here in time, all the matches have been postponed until August.

ROCKAWAY YACHT CLUB.—The Rockaway Yacht Club held their Centennial Regatta on July 4th. The race was sailed over the regular Club Course at Rockaway, with full entries in the two classes. The club house was crowded with members and friends. The ladies were noticeable "by a large majority," and certainly displayed the most enthusiasm. The breeze was strong and the time made was excellent. In the jib and mainsail class the Springaway carried off the first prize, beating the Fanny D. sixteen seconds. In the mainsail class the Gaviota took first honors, beating the Miguon nine seconds. All the boats in both classes being very close together at the finish made a brilliant finale to an exciting race.

Mr. J. Schmidt, owner of the yacht 'Pluck and Luck (Phœbus, what a name! why not call her Liver and Bacon) has accepted the challenge from the owner of the Mary Emma to sail a match from Gowanus Bay ten miles to windward and return, for $500 a side, the match to come off July 27th.

The matches for the America Cup are postponed until August.

TOMS RIVER.—The Annual Regatta of the above club was sailed on the club course on the 5th inst., and resulted in the sloop yacht Carrie winning the Challenge Cup by 22¾ seconds; Cynthia second prize, two $20 gold pieces; Lulu third $20 gold; Mist fourth $10 gold.

The day was very favorable, with a good stiff breeze from the southward. Much excitement had been manifested lately over the merits and demerits of the cat-rig *versus* sloop-rig yachts. The club yachts consist solely of cat-boats, and last year, when Commodore Miller, with his sloop yacht Cynthia, of the Elizabeth Club, carried off their challenge cup, the members still clung to the idea that they could not have been defeated had the wind been in their teeth. Yesterday dispelled all such ideas by our yachtsmen; there is not one left to do them reverence. With the wind all they could desire they were beaten from fifteen to eighteen minutes allowance to windward by the above sloop yachts. It made two very exciting races. The contest between the Cynthia and Carrie was very close, so also was it with the fleet of cat-boats, which kept well together, the Lulu and Carrie Hooper passing the stake side by side. The winner of the cup, Carrie, was built by W. T. Force, of Keyport, N. Y., for Mr. Chas. Carman, of Forked River, and has proven herself to be a very slippery craft, as her principal antagonist, the Cynthia, fresh from her laurels in the centennial regatta, is considered a flyer with no mean record.

B.

YACHTS AT PHILADELPHIA.—On Saturday last there were moored in the Delaware, between Smith's Island and Camden, the following yachts, belonging to the Scawnahaka Club, under the command of Commodore Colgate: Schooners, Wanderer, Capt. Stillman; Idler, Capt. Stevenson; Ariel, Capt. Swain; Meteor, Capt. Isleiu; Sloop Vindex, Capt. Center. This (Wednesday) morning I see that more of them have gone out. The British schooner yacht Helen has been here some time, and the British steam yacht Norseman (which has left) was lying at Walnut street wharf all last week. The yacht Paul Jordan, Capt. Jordan, Americus Yacht Club, Baltimore, arrived yesterday, as did also the Ellie Spedwell, of Washington. The schooner Lancelott, of the Baltimore yacht club, Capt. Taylor Williams, will come in to-day.

SCULLS.

SAYVILLE REGATTA.—Among the many attractions of the "Fourth" on Long Island was a regatta in the South Bay, Sayville landing being the point of departure. Among the boats entered were the Hero, Don Pedro, Selena, Messenger, Minnehaha, and Patent Lever, all having great reputation for speed. The course was a triangular one, to be sailed over twice, making a total distance of about eighteen miles. The prizes were a silver cake basket presented by Mr. E. R. Wilbur, the entrance fees, and a year's subscription to FOREST AND STREAM. The Hero, a Bayport boat, took first prize, making the course in a little less than two hours, the Don Pedro second, and Selena third. Judges—Capt. Gillett, E. R. Wilbur, and W. M. Tileston.

SCHUYLKILL NOTES.

PHILADELPHIA, July 3, 1876.

EDITOR FOREST AND STREAM:—

Among the crews on the Schuylkill little activity is manifested in the way of racing. The Undines, after their victory over the Quakers, cannot refuse to make an entry. The Vespers, who are not a Navy club, have an excellent crew in training. It is not likely they will now secure a race with any Navy club before an open regatta, but I understand that they are open to challenge from anybody. They are anxious to get a race on, as, if they win, they will keep up their four, and if beaten will concentrate their energies on the double-scull race. They presented a crew consisting of McMullan and Mengres, which made a big race with the late fast crew from Chicago, Curtis and Tates; and if a good four can beat the Vesper four they will put these men into a good boat and good training.

For the Centennial Regatta the first formal entry is from

the Dublin University Rowing Club, who enter for the "International four oared race," Mr. Geo. Pentland, Mr. Croker Barrington, Mr. Chas. B. Barrington, and Mr. Geo. A. E. Hickson, with Mr. A. Pentland as substitute. For the Sculler's Prize they enter A. Pentland, with Geo. Pentland as substitute. Accompanying this entry is a certificate that the gentlemen entered are strictly amateurs, according to the Sebuylkill Navy's definition, and are not paid directly or indirectly for their services, by place, emolument, or office as a member, or by reason of their being a member of the Dublin University Club. Mr. Labat also informs the Navy that he will enter for the singles, and probably bring a partner to enter with him in the doubles.

Cambridge's acceptance will now be followed by her entry, and in view of the result at Henly, Oxford's entry may with strong reasons be expected. It remains with American colleges to make the graduate and undergraduate races great events. Harvard is the only representatives pledged, and Yale, after its victory at Springfield, is not likely to refuse to send four of her eight to compete for the centennial medals and the great prizes offered. SCULLS.

—First Trinity, Cambridge, England, has entered a "four" for the Intercollegiate and International amateur races at Philadelphia. Mr. W. B. Close enters for the single sculls, representing Cambridge University.

THE ARGONAUTA REGATTA.—The Argonauta Boat Club of Bergen-Point held their sixth annual regatta on the 4th inst. on the Kill von Kull. The course was from a stake-boat anchored off the club house to and around a stake-boat off Bergen Point, distance a mile and a half. Linsley Watson, of the Nassau Boat Club, acted as referee.

The first race was between junior four oared shells, with the following entries: Reds—James McNider, bow; E. R. Peck, No. 2; F. E. Ballard, No. 3; E. R. Craft, stroke. Whites—L. Hyatt, bow; A. Gallup, No. 2; G. E. Man, No. 3; William Gwynne, stroke.

At 3:35 the word was given, the reds leading; the whites turned first, however, and won by half a dozen lengths. In the pair-oared races W. T. Taylor and John Gunster beat Ed. Smith and W. Man in 9m. 30s.

The third race was between four-oared gigs, with the following entries: Reds—C. E. Dunbar, bow; E. R. Craft, No. 2; G. E. Brower, No. 3; J. A. Lodwick, stroke; Ekward Smith, coxswain. Whites—J. A. Walker, bow; S. B. Trask, No. 2; S. S. Zabriskie, No. 3; W. F. Hobbie, coxswain.

The word "Go" was given at 5h. 2m., and the whites took the lead, both crews shipping a good deal of water. The reds finished the race at 5h. 11m. 50s., wiuning easily.

There were four entries for the single scull race: T. E. Ballard, Jas. McNider, G. E. Man, and Arthur Duane. Man took the lead, Duane second, McNider third, and Ballard fourth. Ballard drew out before he had rowed one-eighth of a mile. Man kept the lead all the way, though Duane made a good second, and McNider third.

The fifth race was between senior four-oared shells, with the following entries: Reds—W. T. Taylor, bow; C. E. Dunbar, No. 3; John Gunster, No. 3; B. Stephenson, stroke. Whites—Ed. Smith, bow: J. A. Walker, No. 2; Nat. Trask, No. 3; Walter Man, No. 4.

At 6h. 31m. 30s. the boats started, the whites leading with 32 strokes to the minute, while the reds pulled 30. At the start the reds rowed unevenly and the whites increased their lead to two lengths. On the home pull the reds closed up the gap to one length, but the whites quickened their stroke and won by two lengths.

The Argonauta's crew to participate in the International Amateur Regatta at Saratoga is composed as follows:

Name.	Age.	Height. Ft. in.	Weight.
Bow—Ed. Smith	27	5 09	145
No. 2—John Gunster	25	6 00	165
No. 3—Charles Dunbar	25	5 10½	165
Stroke—F. C. Eldred	26	5 08	158

CENTENNIAL NOTES.—*Philadelphia*, July 10. During this week the entries for the Centennial Regatta may be expected. In accordance with the original plan entries were to close on July 15, which would include, of course, all entries properly mailed to that date. The date is too long before the regatta, as 30 days is time enough. The time should, and no doubt will be extended probably until August 1st.

Not the least attractive feature of boating during the time to be allotted these regattas will be a race of New Bedford whale boats.

On Wednesday, 12th inst., there will be a meeting here of the Honorary Committee, after which the ad-essential matter of funds will assume more definite shape. It is to be hoped that the committee will fully realize that to do the country credit some large bills must be paid.

SCULLS.

N. A. R. A.—The races of the Northwestern Amateur Rowing Association closed on the 6th inst. in presence of 5,000 spectators. The day was fine and the water perfect.

The first race, single sculls, one mile and return, had five starters, and was won by H. M. Butler, of the Chicago Scullers, in 15m. 56s., closely followed by T. D. Standish, of Detroit.

The senior double scull race was won by Yates, of Union Springs, N. Y., and Medary, of Cincinnati, over Curtis and Montgomery, of Chicago Time; 14m. 1s.

The next race, junior four-oared shells, had five starters, and was won by the Floral City Club of Monroe, Michigan, in 20m. 22s., closely followed by the Undines of Toledo, who broke an oar just after turning the stake-boat.

The most exciting and interesting race of the day was that of the senior six oared shells for the championship of the association. There were three starters. It was won by the Wahwahsums, of Saginaw, making the fastest time in a turning race ever made in a six-oared boat, 17m. 28s.; Zephyrs, of Detroit, second, and 43s. late; Watangas, of Detroit, third.

WE learn from our correspondent, Major Alden, that the highest mid-day temperature at New Smyrna, Florida, for the month of June, was 93 degrees; average 86 degrees throughout the month. The mean temperature at 9 o'clock P. M. was 76 degrees; 7 A. M. 80 degrees. It was several degrees hotter here during the last week of June than it was in New Smyrna.

—The third annual meeting of the National Sportsman's Association will be held at Chicago on Tuesday, August 29.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Sciænops ocellatus.*
Salmon, *Salmo salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confinis.*	
Land-locked Salmon, *Salmo Gloveri.*	Striped Bass, *Roccus lineatus.*
Grayling, *Thymallus tricolor.*	White Perch, *Morone americana.*
Black Bass, *Micropterus salmoides; M. nigricans.*	Weakfish. *Cynocion regalis.*
	Bluefish, *Pomatomus saltatrix.*
Muskanonge, *Esox nobilior.*	Spanish Mackerel, *Cybium maculatum.*
Pike or Pickerel, *Esox lucius.*	
Yellow Perch, *Perca flavescens.*	Cero. *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

For list of seasonable trout flies for July, see our issue of June 29th.

FISH IN MARKET.—Fish of every description continue abundant and cheap. We quote: Striped bass, from 15 to 25 cents per pound, according to size; bluefish, 8 to 10 cents; salmon, fresh from the Restigouche, 25 cents; mackerel, 15 cents each; weakfish, 12½ cents per pound; Spanish mackerel, 35 cents; green turtle, 12 cents; terrapin, $12 per dozen; halibut, 18 cents per pound; haddock, 8 cents; codfish, 10 cents; blackfish, 12 cents; flounders, 10 cents; porgies, 12 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 20 cents; brook trout, $1; soft shell crabs, $2 per dozen; pompano, 40 cents per pound; frogs, 50 cents.

CONNECTICUT RIVER SALMON.—We have made mention several times lately of fine full-grown salmon having been taken in nets in the Connecticut river since the run commenced. So encouraged are those who have interested themselves in the propagation of these fish in that noble river, that they confidently predict an abundance of fish for the rod and the table within the next two years. The fish that have been taken have weighed as much as 18½ pounds, indicating six year old fish. Dr. Hudson of the State Fishery Commission, believes them to belong to the lot hatched out in the Farmington river six years ago. A few only were hatched at this time. It is against the law to take fish weighing less than nine pounds. Those of us who now go to Canada for our salmon, will no doubt enjoy the pleasure experienced by our ancestors 100 years ago, of angling for the lovely fish in the clear waters of the Connecticut, near home.

—Up to July 8th no striped bass had been caught at either Cuttybunk or Pasque Island, but a couple of Worcester gentlemen took six fine ones from No Man's Land on the 7th weighing 260 pounds in the aggregate! This is hard to beat. We shall soon have a heavy record from other resorts in the vicinity.

—We gather from general statements from our Canadian correspondents that the salmon are still slow to rise. The lower parts of the rivers are full of fish, but they have not run up yet.

—Messrs. Eaton, Holberton & Co., are always devising something new and useful in the way of sportsmen's goods. Their last effort is to produce a wonderfully convenient fly-book, very handsomely made, very compact, and capable of holding a gross of flies without curling a snell. They also have a new moccasin shoe, which is a very stout and easy article, and which will prove a great comfort to sportsmen.

—A. B. Villeplait, of 102 Reade-street, caught at Rossville, Staten Island, last week, some very fine weakfish, weighing from six to eight pounds. The fish did not bite very freely, but such as were taken were unusually large and fine.

MAINE.—*Moosehead Lake, July 4th.*—Storm here for two days. Fishing good.

MASSACHUSETTS—*Salem, June 27th.*—I heard quail whistling merrily near the new Asylum, and some grounds in the vicinity are in excellent condition for woodcock, though resident birds are rather scarce. I mentioned hoping to forward some account of brant shooting at the cape this spring. Some persons did well, getting 123 birds in less than a week, besides other kinds of fowl. TEAL.

CONNECTICUT—*Bridgeport, July 1st.*—The black bass fishing in the Housatonic River near Brookfield, Ct., has been very fine for the past week, though the fish have been small in size, averaging less than a pound. Catches of 50 or 60 in a few hours are reported. HUNTINGTON.

Niantic, July 5th.—Lately we have had dull times as far as bass are concerned, I mean dull for this place. We average about one per day, but that is to us quiet fishing. I cannot account for our ill-luck unless it is that the water is so clear that it is difficult to deceive the fish; they are here, and we can see them quietly swimming about under the bridge, but their appetites must be dainty for they refuse our most tempting baits. We are anxiously and impatiently waiting for a good heavy rain, and trust it will change the luck. As a specimen of the sport to be had here when fortune favors us, allow me to give you a memorandum of the best catch made so far this season:—May 30th, Mr. J. J. Le Count caught 32 bass, total weight 283 pounds. It is some time to go back, but the recollection brings comfort to our souls. And after fishing all day and often all night with but poor success, we look over the record book and hope for better luck. SCALES.

NEW YORK.—Mr. John Zabriskie of the Peoples Bank of this city, caught on July 1st in the stream about the enchanting little hamlet of Claraville, Sullivan County, N. Y., on the east branch of the Neversink, 230 trout, varying in weight from one half to two pounds. The largest caught in that part of the State was caught by the above gentleman on that day, and turned the scale at two pounds three ounces. Fine fish they were. The Erie Railroad takes you to Middletown; change there for Morsston on the Oswego and Midland Railroad; from thence you will be directed at Claraville to the most comfortable of hotels kept by Plum Davis. H.

NEW JERSEY.—The report of our Barnegat correspondent for the week ending July 4th, was too late for service. The sheepshead had been biting well; sea bass and blackfish, middling; bluefish plenty but running small, and only taking the squid by spells.

Kinsey's Ashley House—Barnegat Inlet, July 11th.—The following is a partial record of the catches in the bay for the past few days:—

July 3d, John Jacques, N. Y., John B. Baker, N. Y., 35 bluefish; Joshua & Co., N. Y., 36. July 6th, Daniel S. Crosscup and Son, Philadelphia, 6 sheepshead; Jos. H. Throckmorton, 28 sheepshead; Isaac McBride & Co., Philadelphia, 124 bluefish and 5 sheepshead. July 7, D. S. Crosscup & Co., 71 blackfish and 2 sheepshead. July 8, Capt. Newberry, 24 bluefish; John Soper, 23 sheepshead; S. Soper, 20 sheepshead; Jos. Birdsal, 17 bluefish; Albert Stair, N. Y., W. S. Sonnett, N. Y., H. Kierger, N. Y., 11 sheepshead; Isaac McBride, Philadelphia, Joseph McKinney, Philadelphia, John H. Holmes, Philadelphia, William Krall, Philadelphia, David Pollock, Philadelphia, 11 sheepshead. As a general thing sheepshead and bluefish have not been biting by spells this week, but at time of writing the sheepshead are biting sharp; from 15 to 25 per boat are reported. Black and sea bass fishing poor during the first part of the week.

PENNSYLVANIA.—*Philadelphia, July 3d.*—Anglers here either did not know, or what is more probable did not want to know, that the law passed by the Pennsylvania Legislature and approved May 25th, altered the end of the close season for bass from May 31st to June 30th. At any rate there was no lack of Isaak Walton's (?) disciples who went a fishing; and fair luck they had. More sympathy have I with those who took Saturday as the opening, and who came back with fair baskets. Artificial minnow seem to answer nearly if not quite as well even for still fishing as the live creature. SCULLS.

—The black bass fishing at Blooming Grove Park, Pike County, Pennsylvania, is now excellent.

CANADA—*Dungarvan, Mirimichi, New Brunswick.*—About June 20th Messrs. W. C. Page and Henry A. Priest, of Boston; Fred Coleman, of Fredericton; Duncan Shaw, of St. John, with Frank Jardine, of Indiantown, Southwestern Mirimichi, as guide, followed the fish (salmon) up the Mirimichi and Renous Rivers, and overtook them in the Dungarvan, a branch of the latter, about five miles above Indiantown. After going five miles up the Dungarvan they indulged in three or four hours' fishing and took five salmon, one of which, caught by Page, weighed 18 pounds. Shaw killed one weighing 12 lbs. 9 oz., Jardine a 9-pounder, and Priest two, one of which sealed 9 lbs. and the other 7. During the same time they took 120 trout, which weighed 167 pounds.

Magog, Quebec, July 5th.—Weather here delightful; good catches of longe are being made. The Centennial trout (lake trout) caught here yesterday tipped the beam at twenty-three pounds. Good catches of speckled trout are now being taken among the small lakes in this vicinity, and are likely to continue for sometime yet as the water keeps high. STANSTEAD.

Magog, P. Q., July 8th.—Fishing is dull in the lake, and those who would have trout must dare the mosquitoes, etc., in the woods. Near here, however, is a lake that contains nearly every fish that swims; bass, doré (pickerel), sturgeon, pike, etc., etc. If one wants luxury, I know of no place where one can get it so cheaply as here. MANTLET.

TROUT AT MOOSEHEAD LAKE.—The Rochester *Express* says:—The party who visited Moosehead Lake, Maine, consisting of Messrs. A. S. Mann, Ald. W. S. Smith, and Dr. Hurd, returned on Saturday evening last. We learn from one of them that they had excellent luck. We had a glimpse of the sort of fish they get there, one weighing about two pounds, and another one and a half pounds, the latter being as small as any that was caught. Their party secured over 300 pounds, all told. In one day seven fishermen captured one hundred and thirty trout, the total weight of which was 200 pounds, or an average of over one and a half pounds each. That is evidently the place for catching speckled trout. They were all taken with a fly.

FISHING MOVEMENTS.—The number of fishing arrivals reported at this port the past week has been 113—8 from the Banks, 54 from Georges, and 51 from mackereling cruises from off shore. The receipts for the week have been about 810,000 pounds codfish, 500,000 of halibut, and 10,200 bbls. of mackerel.—*Cape Ann Advertiser, July 7th.*

—It is somewhat remarkable that while the Chesapeake Bay is a favorite resort for Spanish mackerel, this toothsome fish is never seen in the Delaware Bay, although the mouth of this great body of water is almost constantly passed and repassed by schools of mackerel. The fish is generally found on hard, stony or sandy bottom, and the latter bay is noted for its large deposits of black loamy soil, similar to that seen on marshes near this city.—*Germantown Telegraph.*

—A Newport, Rhode Island, letter of the 11th says, that bass and bluefish are quite plenty, being caught with rod and reel from the rocks. Twelve fine ones were caught on the 4th, whose united weight was over 500 pounds.

BASS FISHING IN NEW HAMPSHIRE.

BRADFORD, N. H., July 10th, 1876.

EDITOR FOREST AND STREAM:—

Yours of the 6th with samples of flies came duly to hand, for which I am greatly obliged. I tried them a little on Saturday, and killed three bass of about one pound each with the Page fly. I presume I might have done well if I had had any experience in fly fishing. I fished in the Blaisdell Pond in Sutton, two miles from here. There is very fine bass fishing at the Sunnapee Lake, about seven miles west from here, and the same distance east from Newport.

I see by the New Hampshire Fish Commissioner's report they estimate the catch this year at three tons. People at the lake estimate it much larger than that. There are two trains each way daily over the Concord and Claremont Railroad which stop at the water's edge at the head of the lake, passing this place and Newport. Hotels at Newport are good; here very ordinary. We have an abundance of good trout streams here, but they are fished to death. D. R. M.

—In our Kennel Column an interesting article on "Docking Dogs' Tails," will be found, written by "Idstone," the great English authority on such matters.

The Kennel.

ANOTHER LAVERACK.—We are informed that Mr. T. B. Farnsworth, of Paris, Ontario, is about importing the Laverack setter, Carlowitz. This dog is a prize winner, and is by Pilkingtou's Dash out of Llewellin's Countess. Rose, lately imported by Mr. Farnsworth from Mr. Pilkington's kcunel (by Rob Roy out of Victress), has whelped six dog puppies, all of which are sold.

IMPORTATION OF COLLEY.—The City of Berliu, from Liverpool on her last voyage, brought a colley bitch, consigned to Mr. James Cox, Strathroy, Ontario. She comes in whelp to one of the best dogs in England, and herscif and puppies will be found useful in this country, as few, if any, well bred colley's are to be found here.

—The members ot the Greenville (Pa.) Sportsman's Club are in possession of a number of fine dogs. Mr. S. S. Hewitt, the president, is in possession of the fine imported Irish setter bitch, Flora, which has a litter of puppies by a dog presented to Judge Ingalls by Mr. Pope. Among other fine dogs owned in the place are J. F. Nelson's Dash, Gordon setter, and Dau and Jiu from Flora. J. T. Holmes' fine thoroughbred pointer, Dick; H. E. Camp's Laverack setter, Dash; C. Hobaugh's Gordon setter, Shott, the largest dog, perhaps, in the State; G. Wick's pointer, Ponto; M. Hargen Brooks' Gordon setter, Billy, three months old.

—It will be seen among our kennel advertisements that the famous red setter "Robinsou's Jack" is now advertised for stud purposes. Few setters of the prcsent day are better kuown than Robinson's Jack, and from him has been bred some of the best specimens of stylish red setters in the country, and as he is a good field performer, has a finely feathered deep red coat, and plenty of size, bone and muscle, we take pleasure in recommending him to ose who are anxious to hreed fine stock.

—Mr. Miller Ketchem's fine red setter bitch "Beauty," by Wm. Iaves' red setter Dick, dam Jemime, having been sent to us for the purpose, has visited Robinson's famous red setter Jack, brother to Scott Rodman's Dash.

Mr. B. F. Dorrence, of Wilkesharre, Pa., has received a very fine pup by Plunkett, out of Stella, for which pup he claims the name of "Sicila."

For Forest and Stream.

DOCKING DOGS' TAILS.

BY IDSTONE.

I READ with much interest in your paper of June 5th an article on the mutilation of dogs' tails. I thoroughly agree with you that there are few greater deformities thau a long or a ring-tail, or, let me add, than the screw-tail in the bull-dog. Several of our best strains of setters are made hideous from their length of stern, which is proportionately weak and wanting in muscular power and energy.

I believe that the word "tail" is considered inappropriate to sporting dogs, and I once heard a young breaker corrected for using that term by no less a person than "Old Bishop," the father of some of the best dog breakers in England. "Young man," said he, "a dog has a STERN, a *monkey* has a tail."

However, though contrary to Episcopal authority, let us, for this once, write of dogs' *tails*. There is in one race of setters (the Gordon) the unmistakable "teapot" tail. Singularly enough this peculiarity, which has almost died out, attaches itself to some of the best strains of Gordou ever produced. Some of the best working setters of the day have tails, I dare say, twenty inches long, with a hook at the end that you could open a gate with.

Pointers don't fail so much in this respect, and the blood of the champion Sancho is very likely to improve them. I don't think that Sancho's tail was over twelve inches, thick at the base and ending in a sting or fine point. It would have improved him had he had three inches more, and that was the only point where improvement was possible in him.

When I was a boy every pointer's tail was cut, not *cut* but *docked*. I have seen lots of pointers with tails not over four inches long. There was then, of course, no fine action, no lashing as they galloped like a fox hound, drawiug a gorse covert, nor that magnificent attitude of the *point* earried out by the tail's graceful undulating lines.

Sheep dogs were eventually whelped—whole litters of them—with *no* tail; and I had one litter of pointers which were (several of them) tailless at birth. I have seen few setters deviate from the regulation length, except when their tails were *too long*, and I have never known them docked except once *by mistake*, when the kcunelman at Mr. Radclyffe's (the father of the master of fox hounds in Dorset, Ireland), amputated the tails of a whole litter of red and whites, two of which survive on canvas at his house.

The setter's *stern*—one of his great ornaments—should be about fifteeu inches long, with a thin *fringe*, deepest in the centre, and tapering at both ends. To take off a joiut would interfere with this graceful line, and in Great Britain no dog would sell if thus *improved*. (?)

It is not so many years ago that I battled strongly against cutting the ears of fox terriers. The eye of the public was so accustomed to "cropping" terriers' ears that it was long before they would come to it, and even now bull terriers and Manchester terriers are thus disfigured. But these two breeds are perpetuated by the faucier and cockney, not by the sportsmen. The pug also is exempt, and that long suffering "wafer" dog the Dalmatian.

If my brother sportsmen in America will but breed from short tailed setters they will gradually diudnish the tail; they wont by cutting off joints of it. And, besides, in dogs of mature age there is danger or cruclty, for there is au artery which must be cauterized. I went, some years ago, to a dog dealer's yard where there was a hole in a door, the hole being stained pretty much with blood. "What's that," I asked, and the boy said, "That's where master shortens the dogs' tails accordin' to the taste 'o customers. I goes inside and pokes the dog's tail through, master ketches it, and I bolts; then he shuts the door and begins a cuttin' and seariu', and the dog *he can't do nothin' but holler*."

IDSTONE.

"SPRING'S" EPITAPH.—EDITOR FOREST AND STREAM:—The following epitaph was copied, some years ago, by a friend from the board over "Spring's" tomb, in the rear of the Park house, Newark, N. J. The author, "Matt Ward," was an erratic genius in his time; and his efforts at doggerel verse show that he was not without fine sentimeut and brilliant wit. The lines are so much better than the usual run of grave-yard poetry that I venture to forward them to you for publicatiou, not knowing that they have ever found their way into print. J. W. GRIGGS.

"SPRING."

Died July 19th, 1843.

On brute and monarch death alike will call,
Dogs have their day, and Spring hath had his fall.
Doctors by barking, lawyers biting thrive;
Spring could do both, both could not make him live.

From human puppies he had gifts apart,
They heartless soul's, and he a soulless heart:
They, doomed to future life, meet death with fear,
But he, more happy, sleeps forever here. MATT WARD.

BENCH SHOW POINTS.—The points for judging pointers are as follows:—

THE POINTER.

Head should be moderately long, narrowing from the skull; the skull not too prominent above the eyes, as this gives a heavy appearance; rather deep in the lip, but not any flew, or very slight; nostrils open, with level jaw; eyes moderately bold; ears thiu, set iu to the head, just where the skull begins to recede at the sides of the head, hanging flat on the check; throwing the ears back so as to show the insides has a bad apperrance, and too often indicates a cross; neck medium in proportion to the head, and body rather inclined to be long, but not much so, thickening from the head to the set-in of the shoulders; no looseness of the throat skin; shoulders narrow at the meeting of the bladebones, with a great amount of muscle, long in the blades, set slanting, with arm of the leg strong and coming away straight, and elbow neither out nor in; the legs not great heavy boned, but with great amount of muscle; leg pressed straight to the foot, well rounded and symmetrical, with foot well rounded, this is the fore-legs and feet; chest moderately deep, not over wide, but sufficiently wide and deep to give plenty of breathing room; back level, wide in loius, deeply ribbed, and with ribs carried well back; hips wide and full of muscle, not straight in the hock, but modcrately bent; stifles full and well developed; the stern nearly straight, going off tapering to the point, set in level with the back, carried straight, uot above the level of the back; symmetry and general apperance racy, and much beauty of form appears to the eye of the real pointer breeder and faucier. The weights we consider best for different purposes are from 50 lbs. to about 65 lbs. Coat short and glossy, but a deal here depends on condition.

POINTS IN JUDGING.

Head	20	Feet	10
Neck	10	Loins	10
Shoulders	15	Stifles	5
Legs	10	Stern	15—100

THE CENTENNIAL BENCH SHOW.—Since the publicatiou of the classes of dogs, more interest has been developed in this great show. The system adopted of giviug the awards, has been favorably received by all breeders, and many of the most noted dogs will he here. Canada and England will also send some of her choicest canines. The fox terrier class, a new feature at shows in this country, will, it is expected, be well filled, as entries have already been received, and when this hreed gets more favorably known, I expect they will become as great favorites as they are in England, for they are "as handsome as a picture." The programmes will be ready about the 8th inst., and applications for them and forms of entry, will receive prompt attention. Entries close August 1st. CHAS. LINCOLN,
Philadelphia, July 1st. Superintendent.

RULE FOR DOCKING TAILS.

EDINA, KNOX County, Mo., June 20th, 1876.

EDITOR FOREST AND STREAM:—

I see that your article on tailing, or docking of dogs' tails, has called forth a reply from one who is evidently a sportsman. Now, this is as it should be, and I hope to hear more on the same head - excuse the bull; but I think your correspondent is too conscientious by half. I admire a long (not too long) willowy tail on a pointer, but if the end were crooked I would not hesitate to remove it—the crooked part—if it were possible to do so without making the tail too short. The following is a rule that I have adopted, and have always found it to work well. Where I find that it is necessory to remove a portion of a dog's tail to better his appearance, I stand the dog square upon his legs, take the tail, and measure down to the hock, and remove all over and above what will reach to the middle of the joiot of the hock; in this way you get the tail in proportion to the length of the dog's back, and I think if this rule was more gouerally followed, we would see fewer bob-tailed dogs. I would like to hear more on this subject from you, Messrs. Editors, and sportsmen generally. JAMES BENNESSY.

INSTRUMENT TO MEASURE THE VELOCITY OF A PROJECTILE.—The Boulanger instrumeut which measures the velocity of projectiles may be briefly described as follows: Placed in frout of the gun, at an interval apart, are two wire screens, so arranged that the projectile in its flight tears through them one after the other. From two magnets attached to the instrument hang two metal rods, and the instant the first wire screen is torn by the shot a current of electricity is broken and the first of these rods falls. As No. 1 is in the act of falling, however, the second wire screen is broken by the shot, releasing No. 2 rod, and this setsin action a complete trigger which strikes No. 1 rod before it has yet completed its fall. If the shot has been slow in traveling from one screen to another then rod No. 1 has naturally enough nearly fallen its entire length before it receives a stroke from the trigger. The higher the mark is upon rod No. 1, or the more it has fallen, the less rapid has been the passage of the shot. After the mark is made, reference is made to a scale where velocities have been calculated.

National Pastimes.

CRICKET.

PHILADELPHIA, July 10th, 1876

On Tuesday week the St. Georges Cricket Club of New York, played a one day's match with the Germantown, and were almost as unfortunate as in their game with the Young America the previous day, the score being 76 to 106 with only four wickets down. On Thursday the Germantown Club was defeated by the Dorian of Haverford College. The Dorian made in their first inning 92 runs, 16 of which were by Baily, 22 by Nicholson, 15 by Crossman, and 11 by Newkirk, (not out). The Germantown's had trouble with their opponents bowling and fielding, and with Jno. Hargreave's 13, Welsh's 17, aud Brewster's 9, made but 68. The Dorian's second inning was for 50 runs. Baily, Kimber, aud Crossmaau, getting into double figures. The Germantown's second inning was for 12 for 1 wicket, when stumps were drawn. Being a one day match the score stands: Dorian 92, Germantown 68.

In the account of the match between the Germantown and Philadelphia last week there is a questiou of veracity that lies between Sculls and the compositor. However, like the man who swore that his horse was fourteen feet high when he meant fourteen hands—if I wrote that Hoffman made 280, when his score was only 28 runs, I will stick to it, "accuracy is the main point." The second Eleven of the Merion played the St. Timothy, resulting: Merion 134, St. Timothy 30. The latter club made 142 for 9 wickets on their second, but it was as most games are a one-day match.

—A return match between the Young America and Germantown was commenced Friday last. The Young America completed their iunings on Saturday for 302 runs, made by some heavy batting, Dau Newhall making 106 runs. The Germantown's had uot completed their innings when stumps were drawn. The game will be resumed on Saturday next, and will be played out—a much more satisfactory plan than that of playing one day matches—if indeed cricket is satisfactory at all with the thermometer at 100° in the shade. The game bids fair to reverse the result of the last one, in which the Germantowns were victors by 22 runs after three day's play. If finished I will send you full score next week. SCULLS.

BASE BALL—THE PROFESSIONAL ARENA.

The campaign in the west has been made specially interesting by the past week's play which was signalized by the defeat of the Chicago nine by the Hartfords in two out of the three games they played together. This leaves them with three victories to their credit, and three defeats charged to each as follows:

May 23.—Chicago vs. Hartford, at Hartford	6 to 4
May 27.—Chicago vs. Hartford, at Hartford	8 to 1
July 8.—Chicago vs. Hartford, at Chicago	9 to 3
Total	23 8
May 25.—Hartford vs. Chicago, at Hartford	4 to 1
July 4.—Hartford vs. Chicago, at Chicago	3 to 0
July 6.—Hartford vs. Chicago, at Chicago	6 to 2
Total	13 3

The Chicagos had, up to June 10th, won 26 games and lost 7; the Hartfords having won 24 and lost 6. This week the Chicagos play the Boston nine, and the Hartfords the St. Louis, and these games will wiud up the western tour series.

The second of the League pennant contests to July 10th inclusive, is as follows:—

	Athletic.	Boston.	Chicago.	Cincinnati.	Hartford.	Louisville.	Mutual.	St. Louis.	Games won.
Athletic	..	1	1	4	0	1	3	0	10
Boston	3	..	0	6	0	2	3	3	17
Chicago	5	3	..	4	3	4	5	2	26
Cincinnati	2	0	0	..	1	0	2	1	6
Hartford	3	4	3	..	..	5	3	2	24
Louisville	5	4	0	3	1	..	3	1	14
Mutual	1	1	1	3	1	2	..	1	10
St. Louis	6	3	2	3	0	3	4	..	20
Games lost	25	16	7	26	6	18	20	12	127

The Mutual-Louisville game of fifteen innings, with a score of 5 to 5, is not counted in the above table.

The summary of the above leaves the clubs occupying the appended relative positions:—

Clubs.	Games Played.	Games Won.	Games Lost.	Games Tied.
Chicago	33	26	7	0
Hartford	31	24	6	1
St. Louis	32	20	12	0
Boston	33	17	16	0
Louisville	35	14	18	3
Athletic	32	10	22	1
Mutual	31	10	20	1
Cincinnati	32	6	26	0
Total	260	127	127	6

The above include the drawu games. The general average of the League clubs to July 8th in first base hits and errors is as follows:—

Club.	Games.	Av. 1B.	Av. E.
Athletic	33	12 05	9 19
Boston	31	9 35	11 03
Chicago	31	11 81	4 77
Cincinnati	30	8 10	9 30
Hartford	29	10 24	5 55
Louisville	33	8 67	7 09
Mutual	29	7 93	8 24
St. Louis	30	9 47	6 97
General average		9 70	7 77

It will be seen that the clubs having the best average in fewest errors are the Chicago, Hartford, and St. Louis nines, the three clubs which lead, while the Athletics lead in base hits, though seventh on the best in even games. These show pretty plainly that it is fielding which wins in the long run.

The model games in July up to the 10th in which the winning nines scored 5 runs and less, are as follows:—

July 1.—Lowell, vs. Live Oak at Lynn	5 to 3
July 1.—Lawrence vs. Everet, at Boston	5 to 2
July 3. Charter Oak vs. Rhode Island, at Brooklyn (10 ins.)	2 to 1
July 3.—Mutual vs. Capital City, at Indianapolis	4 to 1
July 4.—Hartford vs. Chicago, at Chicago	3 to 0
July 4.—Louisville vs. Mutual, at Louisville	4 to 1
July 4.—New Haven vs. Buckeye, at Columbus	4 to 0
July 4.—Boston vs. St. Louis, at St. Louis	4 to 3
July 4.—Arlington vs. Chel-ea, at Brooklyn	5 to 2
July 4.—Lexington vs. Americus, at Lexington, Ky	5 to 2
July 5.—Fall River vs. Charter Oak, at Fall River	5 to 0
July 6.—Cincinnati vs. Athletic, at Cincinnati	5 to 2
July 6.—Boston vs. St. Louis, at St. Louis (12 ins.)	5 to 4
July 7.—New Haven vs. Cincinnati, at Cincinnati	3 to 1
July 8.—Louisville vs. Mutual, at Louisville (15 ins)	5 to 5
July 8.—Olympic vs. Star of Covington, at Boston	5 to 4

NOTES.—The Nameless club of Brooklyn defeated the Staten Island nine at Prospect Park by 7 to 4. It was the hottest day of the season.

Mr. Leeds, of the Harvard nine, in the match with the Chelseas, July 7th, had three teeth knocked out, owing to a collision with Mr. Latham while running to get under a fly ball. The accident stopped the game and ended it with a draw, though the Hartfords stood at 9 to 2 in the 8th innings.

It is said that the Hartfords will present the following team next year: Clapp, c.; Bond, p.; Start, 1b.; Burdock, 2b.; Ferguson, 3b.; Hallinan, s. s.; York, l. f.; Remson, c. f.; Higham, r. f., and Harbridge, substitute.

The New Haven nine have now won games from the Hartford, Boston, St. Louis, and Cincinnati nines.

The record of the contest east vs. west leaves the west in the van by a total of 42 to 39 in won games up to July 10th.

BIG JUMP.—Mr. Fred Woodbury, now a student at Mount Union College, Ohio, and a noted gymnast, recently made the remarkable standing jump of thirteen feet eight inches.

New Publications.

BOOKS RECEIVED.

THE PRAIRIE PROVINCE. By J. C. Hamilton, M. A., L L.B: Published by Belford Bros., Toronto, 1876.

This valuable work is a compilation of sketches of travel from Lake Ontario and Lake Winnepeg, and an account of the geographical position, climate, civil institutions, inhabitants, productions, and resources of the Red River Valley The author tells in language plain but terse what he saw and gathered in a summer trip from the capital of Ontario over the northern waters and some of the rich mineral regions of the "North Shore." From these he passes to Manitoba, the Prairie Province, the little quadrilateral carved out of this great north land which has become part of the Dominion of Canada. Although it has been called by a popular writer, who saw it in winter, "the Great Lone Land," Mr. Hamilton describes it as a land of richest soil and broad prairies, through which flow rivers, draining and enriching. The book is almost a history of that, until recently, almost unknown land, describing the cities and villages which have sprung up, the men of many colors and language who have settled it, and the resources in mineral and agricultural wealth.

CONTRIBUTIONS TO NATURAL HISTORY, ETC. By James Simson: Edinburgh: the Edinburgh Publishing Co.; 1876.

Mr. James Simson, now residing in this city, has reprinted under the above title a series of papers originally published in *Land and Water*. The essays, which are very interesting, though partaking largely of a controversial nature, deal chiefly with questions affecting snakes and vipers. The Gipsies are conquerors with the snakes for Mr. Simson's regards, and several papers are devoted to these mysterious nomadic tribes. Perhaps the most curious paper in the volume is written to prove that John Bunyan was a Gipsy, and a very fair case is certainly made out, principally from Bunyan's own autobiographical statements. Charles Waterton's status as a naturalist is also discussed. Mr. Simson thinks he dazed his readers with Romanism, and we agree with him. Waterton's confessed credulity in religious matters, of which the senses could judge, always made us look twice at some of his scientific statements. John Stuart Mill comes in for what English reviewers call a "slashing criticism," and the Duke of Argyll's "Reign of Law" is reviewed. The book is an extremely readable one, and one full of suggestions to the field naturalist. Not long ago Mr. Simson showed us an article which he had written reviewing the notes by Frank Buckland upon White's ideas in respect to vipers swallowing their young, in his late edition of White's "Natural History of Selborne." Failing to get this printed by any of the English natural history papers—through fear of offending Mr. Buckland we are left to infer—Mr. Simson has just printed it himself. The question is, Do vipers (and snakes in general) swallow their young? Mr. Buckland affirms that they do not, while our author is as positive that they do. And he contends that the question is entirely one of evidence, and, therefore, should be settled "as a fact is proved in a court of justice; difficulties, suppositions, or theories not being allowed to form part of the testimony." In support of his own views, Mr. Simson has collected a large body of evidence that undoubtedly appears authentic and conclusive. His remarks are severe upon the alleged flippant way in which Mr. Buckland has treated this subject, and the whole editing of White's Selborne; and he questions very much whether Mr. Buckland has a just right to the reputation as a naturalist which he has acquired. Mr. Simson tells us that in his treatment of the matter in dispute, Mr. Backland has "ignored every circumstance, argument, and fact bearing on the affirmative side of it, and has had recourse to the ignorance of others, and a song, instead of hard facts and solid reasons, in support of it. Since he has committed himself so fully to the question at issue, judgment must be given against him by default in the event of his not making good, or not explaining, the challenge he has laid before the world for years back." The challenge alluded to is the offer of £1 to any one who should bring him "a specimen of a viper which has been seen to swallow its young, *the young being actually in the œsophagus, or in the stomach proper*, when it is opened by me in the presence of witnesses." Mr. Simson charges that the £1 is safe, because the young vipers are not received into the mother's "stomach proper," but into the chamber that previously contained the eggs, and which lies in front of, and below the stomach; and that Mr. Buckland is guilty of quibbling and avoidance of the true question. Mr. Simson evidently has a prejudice against the editor of *Land and Water* almost equal to that of Waterton against Audubon, and while in the main we think his criticisms upon Mr. Buckland's rendering of the "Selborne" are justified; we deplore the acerbity of their tone. It is possible, however, that Mr. Simson considered a severe handling necessary, since he tells us Mr. Buckland's "surroundings in England make it a difficult matter to "bring him to justice' on this question in the ordinary way."

MAGAZINES.

The American Naturalist is improving, if possible. The July number presents an admirable table of contents covering subjects ranging from a New Zealand volcano to a New England butterfly. The most valuable paper is that by Dr. Hagen of the Cambridge Museum, upon the Probable Danger from White Ants. He recounts the enormous damage done in various parts of the world to whole buildings, dams, bridges, libraries, and museums, which in some cases has been so great as to call for scientific commissions and legislation against them. So far in this country little damage has been done by their ravages, although they are exceedingly numerous in many parts. Harvard Library has suffered somewhat lately however, and this is no doubt what called out the article. They may exist in countless millions in a locality for many years and do no harm; and then suddenly attack the structures of men. They live in the ground under and about rotten wood, and where the ground is very rich. There seems to be no effectual way to put a stop to their raids when once begun, and prevention is advised. This is to be accomplished, if at all, only by diminishing the young by cutting off the supply of food. This food is rotten wood, and every piece of it possible should be removed near houses and towns; old fences, stumps, piles of boards, &c. Another important point is not to have well-manured flower-beds close to wooden houses; and another not to have wood work where the steam from locomotive or stationary engines is constantly moistening it. All these places propagate the ants rapidly. This is a powerful enemy which so far has been pancakable, and it is to be hoped will long remain so. White ants "are only the police of nature," and they retreat step by step before advancing culture. In Africa and India, where a century ago immense anthills were to be found near the shore, now some days' journey inland have to be made to find them. A similar retreat may be looked for here. Remembering how recently Dr. Hagen came to this country we cannot but congratulate him upon his rapid aquirement of elegant English diction.

Appleton's Journal has been changed from a weekly to a monthly form. It is issued in very handsome shape, with fine illustrations. All the eminent American and European writers who have contributed to the columns of the *Journal* are retained in the new arrangement, and will be reinforced by other brilliant pens. The contents of No. 1 are varied and interesting, comprising installments of new novels, brief stories, essays, poetry, and spicy articles on current topics.

Sheldon & Co. announce for early publication a complete Life of General Geo. A Custer, embracing his Indian and Army Campaigns. The book also embraces General Custer's War Memoirs, as written by himself, and published in the *Galaxy*. The publishers of the *Galaxy* received from General Custer the last of these articles after his death, it having been written and sent while on the march in his last campaign.

Answers To Correspondents.

D. R. M., Bradford, N H.—Have forwarded patterns of the Page and Ferguson bass rifles, as desired.

J. D. K.—Please inform me of the weight of the largest bass that you have heard of being caught by a rod and reel? Ans. Seventy-six pounds, taken at Cuttybunk by a member of the club.

SCALES.—Can you inform me when the trout season closes in this State. I have been told by some gentlemen that the first of this month put an end to the sport, but can hardly believe it? Ans. The close season commenced July 1st.

E. W., Pittsburg.—Please inform me where I can find good hunting and trout fishing within one hundred miles of Pittsburg? Ans. On the mountain above Altona you will probably find good woodcock shooting and trout fishing.

R. C. H., Brooklyn.—How can I distinguish male from female pigeons? Ans. It is a difficult thing to briefly describe the different external marks in ordinary breeds. You would better take pigeons of known sex and learn the differences for yourself by examination, blowing apart the feathers covering the vent.

T. O., N. Y.—Will you let me know after what day partridges can be shot in this State; Mr. H. C. Squires in his catalogue gives September 1st. but I have heard that there has been a change? Ans. The close season for ruffed grouse (partridge) expires on September 1st.

C. T., Pawtucket, R. I.—If your dog continues to have fits, add 1 dr. of bromide of potassium to 1 oz. water, and give him a teaspoonful 3 times a day. If you suspect the bas worms, we can send you some areca nut. Give him exercise and feed very little meat.

C. H., Jersey City.—Florida is attracting the attention of many in this city who want to learn all they can about that State. Where can we obtain practical information of a reliable character? Ans. The "Floridn New Yorker," published at 22 Beekman street, this city, and edited by a fine writer who has lived in that State over twenty-five years, meets your wants exactly.

L. R. W., New York.—Will you kindly inform me whether in September I may expect to get enough trout fishing to pay for a long journey to the southern part of Nova Scotia, somewhere in the neighborhood of Lake Rossignol, where my companion proposes to hunt moose? Ans. You can not find a better locality for moose and trout, than the Lake Rossignol district. You can get trout there in September. Would advise you to take steamer from St. John across the Bay of Fundy to Annapolis and hire a wagon thence to take you over the South Mountain into the game country.

BUCK, Indianapolis.—Will you please inform me through your valuable columns, where in Canada, and at what time can we get good moose hunting? If you have previously given a lengthened description of the subject be kind enough to send me a copy of the same? Ans. Moose are "called" in September and October and "tracked" when the first snow falls. For articles on Moose Hunting in Canada, New Brunswick, and Nova Scotia, see FOREST AND STREAM, December 4th 1873, January 22d, and 29th, February 19th, and April 2d, 1874, and June 8th, 1876. Copies of above forwarded.

TAXIDERMIST, Hartford.—1. What is the law concerning the shooting of birds for the purpose of stuffing; am I obliged to wait until the law is off, or can they be shot at any time, particularly in Connecticut? 2. Can you tell me a cheap and late work on taxidermy? Ans. 1. The laws of Connecticut make no exception in favor of collectors or "stuffers," so you will have to wait for the open season. In other States exceptions are made in their favor. 2. A. J. Maynard's (Newton, Mass.) Naturalist's Guide is the best, and the Taxidermist's Manual (Jesse Haney, No. 232 Nassau street,) the cheapest.

C. S. W.—1. Is there in any previous number of FOREST AND STREAM any article on camp cooking? If not, will you please give me the name and price of a work on that subject? 2. Will you please inform me concerning the fishing near Hunter's Landing, Lake George? Ans. 1. In the books on angling of Thaddeus Norris, R. B. Roosevelt, and Genio C. Scott, you will find chapters on camp cooking. 2 Can not speak positively regarding the places you name, but you will find the best fishing among the islands in the Narrows.

J. A. L., Kansas.—1. Is it necessary for correct shooting that a paper shell when loaded should be of sufficient length to fit up close to the shoulder inside of the barrel, if so how is it possible for a person to use paper shells, whose length, when loaded and creased, are necessarially varied by the load put in them? 2. Will all breech-loading shot guns shoot both brass and paper shells equally well; if not, why not? Ans. 1. In order to have the best shooting a gun will make, the shell should be of sufficient length to fit up closely to the shoulder. This you can regulate by adding an extra wad on the powder, when you are shooting small loads, or do not cut or crease, but use glue or mucilage on your wads. 2. Metalic shells can be used in any central-fire breech-loading guns but it is best to have the shells made to fit nicely—they are quite equal to paper shells.

E. E. L., Philadelphia.—In your columns of enquiries you will oblige by giving the following information: Where can my wife and I spend a month where board is reasonable and where I can have good inland or sea fishing? Please state terms if you know, and route to get there? Ans. At Sayville, Long Island, N. Y. Fishing in the Great South Bay; board $5 to $10 per week. Write to E. Dane, Sayville, Suffolk county, N. Y.

AMATEUR, Chappaqua, N. Y.—1. Will you kindly inform me through your paper whether a slut can be spayed at three years of age or any time after she has had pups? 2. A owns a farm which B works on shares, B put up notice against trespassing, C asks A if he signed any such paper, A said no, I don't care who guns on my place so long as they don't run out of season and do no damage. C guns on the place, B has him arrested for trespassing, what can he do? Can he make C pay? Ans. 1. A bitch can be spayed at any age, but the operation should, by all means, be performed before they are three months old. If it is done after they have matured, it exhausts them, and they incline to become very fat and unserviceable. 2. B would have a right to recover damages unless A in his lease to B reserved the shooting privileges.

ENQUIRER.—Can you inform me if it is a wise plan to have pup's tails (setters) straightened by pulling out the cords when they are young? If a good plan, how young should the pup be, and how is it done? I shall be obliged for an answer through your most interesting "Answers to Correspondents," which seems to include all the practical wisdom of a sportsman? Ans. We consider it very wrong to attempt to cut or straighten the tails of *setter* pups. Let them grow to full size, and then if the tail is out of proportion in length or is crooked, a skilful person, by docking, can improve the appearance of the dog.

F. J. S., Pittsburgh, Pa.—1. I have a very fine pointer pup that recently had the canker, for which I gave him equal parts of liquor of plumbi and distilled aqua which cured him in a few days, but now small sores have broken out on him around his belly and head. They are about the size of a pea and of very offensive smell; can you do any thing for him? 2. When does the close season for woodcock and squirrels expire here? By answering these questions you will oblige a young reader of your paper. Ans. 1. Take Basilicon ointment 2 oz., add ½ oz. of flour of sulpher and enough spirits of turpentine to make the ointment of proper consistency to be well rubbed into the parts affected—washing the parts occasionally with castile soap—and feed very little meat. 2. The close season for woodcock ends on the 4th July, for squirrels on 1st September.

N. B. S., Chestnut Hill, Mass.—1. Does it lead or injure any way the barrels of a breech-loading rifle to shot shot in it? 2. Where can I get a pair of stout shoe-packs of moose-skin, handmade? 3. Where can I procure Colvin's Adirondack Report and at what price; can I get it in Boston? 4. What place along the New England coast is considered best for marsh birds? 5. Is deer shooting in the Adirondacks allowable in July and August? Ans. 1. It would probably cause the grooves of the barrel to lead. 2. From John Branchavain, Gaspe Basin Post Office, P. Q. Canada, or W. H. Patterson, Gaspe, Canada. 3. We doubt if you can procure a copy of Colvin's Report unless it is at some second-hand book store. 4. Gloucester or Salem. 5. No.

CRUMBS, Terre Haute, Ind.—I have a fine dog, now three or four years old, that for the last six months has been getting worse with a disease which medicine fails to reach. He has a slight running at the nose, mattering of the eyes, a bad cough, and loss of strength and flesh. He eats heartily and seems always hungry, but cannot retain the food on his stomach. Do you think the areca nut you speak of would be good for him; if so, please send me some, with cost and direction? Ans. The probability is your dog is afflicted with worms; have mailed to you the proper doses of powdered areca nut, with directions for its use. Let us know the result.

A. L. F., Elkhart, Ind.—I wish to build a small boat for duck shooting and fishing; one that is quite portable, yet sufficiently large to safely carry two adults. I would like to make a light, stiff frame, cover with strips of pine 3-16 or 4-16 inches in thickness, and over this put canvas and paper, or canvas alone, and coat with some substance, simple or compound, that will be waterproof and at the same time have adhesive power enough to stick the layer or layers of canvas, or paper, or both, together, and on the boards, and yet not destroy the strength of the canvas. In your issue of 8th June mention is made of a mixture of "shellac varnish and boiled linseed oil." Now, these articles will mix about as well as oil and water, and spread "patchy." How would common white paint (lead and oil) do? Ans. Send your canvas to O. Tappan, Greenwood, N. Y., to be waterproofed, or write to him for formula. After spreading paint with common white (zinc) paint, and it will last for years. The white paint alone would answer, but must be renewed often.

F. H. T., Rockville, Conn.—I have a fine pointer dog one year old, and he is breaking out all over with fine pimples. He has also several spots where the hair has come off the size of a copper cent and smaller. What is the matter with him, and what is best to be done? Ans. Make charcoal of leather, powder it, add to it a little flour of sulphur, and with lard and a little kerosene make an ointment of the proper consistence to rub fairly into the skin, washing the parts affected occasionally with castile soap. Feed very little meat, and give him plenty of exercise.

J. H. P., San Francisco, Cal.—My setter pup three months old shakes his head a good deal of late. On examination I find the inside of the left ears somewhat inflamed, the skin toward the root looking red, while the other ear is pale. I did not think that canker would attack a puppy as young as that, but it may be the mother is troubled with canker since she weaned the pups. The treatment pursued with her is putting some sweet oil in her ear, and washing occasionally with castile soap and warm water, and I have commenced to do the same. Mayhew advises the use of liquor plumbi and distilled water in equal parts; but I would rather hear your advice first. I have found boiled carrots an excellent thing for pin-worms. The first three times I peppered to feed them he passed considerable quantities of worms. I make it a point to feed them about once a week, and I find that I keeps him entirely free from worms. Ans. We consider Mayhew's remedy a good one; try it, and if it does not cure we will give you another.

J. H., Berks County, Pa.—1 Can suckers be caught with bait and hook? Is there any way to catch them except with net? 2. Will trout increase beyond a few dozens or hundreds in a large spring, say 200 feet in diameter, and when they are confined within this compass and not fed? Will not the big ones eat the small ones and so keep the sum total down to about a given number, even though none should be caught out of the spring? 3. We have in our springs and waters here a terrapin or turtle. They are small, five or six inches long, barred or checkered on the back and deep orange color on the under side, a little white about the head near the eye. Are they good to eat? How can they be caught, and how cooked? Ans. 1. Suckers are frequently taken with worms. The most common way of taking them is with a wire slip-noose on the end of a pole. When the fish is discovered the loop is slipped over his head and jerked taut. 2. Trout should be kept, the different sizes separately, and not too many in a confined space. Big trout will eat the little ones, although not to the extent common with many varieties of fish. 3. These little pond tortoises are good enough to eat, and are sometimes eaten, but are troublesome to clean and cook on account of their diminutive size. They can be caught with a drop net, without much trouble, if one is cautious in approaching the sunning places.

A BRINDLED HORSE.—A correspondent writes from Fort Lapival, Indian Territory, asking if we, or any of our readers, have ever seen a brindled horse, and saying that there is one at that place that is a perfect brindle in color, 13½ hands high, and perfect in form. If any member of the Polo Club would like a novelty in the way of a pony we will gladly give him the address of the owner. We have seen calico or *pinto* horses in California and Mexico, and horses striped almost like zebras, on the plains of Tartary; we have seen horses with curly, or almost woolly hair, and horses with scarcely any hair at all; but a brindle, outside of the races of bull-terriers and cows, is something we have yet to encounter.

—Some of the French Canadians have rather an original way of digging potatoes. Instead of taking up everything in the hill at once, they merely scrape away the earth till the tubers are revealed. They then separate those fit for the pot and cover up the root. In this way every juvenile potato is given a chance to grow to maturity, and a little patch yields a wonderful quantity.

FOREST AND STREAM

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK.

[POST OFFICE BOX 2832.]

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty-five per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Where advertisements are inserted for 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, JULY 13, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,
Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, July 13th.—Trotting: Point Breeze Park, Philadelphia; Ambler Park, Pa.; Lake City, Minn.; Chester Park, Cincinnati. Rifle: Creedmoor. Base Ball: Mutua vs. Cincinnati, at Cincinnati; Boston vs. Chicago, at Chicago; Hartford vs. St. Louis, at St. Louis; Athletic vs. Louisville, at Louisville; Alaska vs. Rochester, at Rochester, N. Y.; Nassau vs. Olympic, at Paterson, N. J.; Harlem vs. Mutual, at Melrose, N. Y.; Orange vs. Chelsea, at Orange, N. J.

FRIDAY, July 14th.—Trotting: Chester Park, Cincinnati; Suffolk Park, Philadelphia. Base Ball: Arlington vs. Union, of Newark, at Jersey City, N. J.; Mutual vs. Chatham, at Hoboken, N. J.; Ætna, of Detroit, vs. Cricket, at Binghamton, N. Y.

SATURDAY, July 15th.—Trotting: Newark, N. J. Rifle: Matches at Creedmoor and Glen Drake. Base Ball: Mutual vs. Cincinnati, at Cincinnati; Boston vs. Chicago, at Chicago; Hartford vs. St. Louis, at St. Louis; Athletic vs. Louisville; Lafayette vs. Nameless, at Milburn, N. J.; Eureka vs. Union, at Unionsville, L. I.; Nameless vs. Winona, at Brooklyn, N. Y.; Tea vs. Coffee, at Brooklyn, N. Y.; Witoka vs. Lafayette, at Brooklyn, N. Y.; Contest vs. Union, of Unionsville, at Brooklyn, N. Y.; Nameless vs. Arlington, at Brooklyn, N. Y.; Hoboken vs. Staten Island, at Hoboken, N. J.

MONDAY, July 17th.—Trotting: Newark, N. J. Rifle: Cavalry competitions at Creedmoor. Base Ball: Mutual, of Brooklyn, N. Y., vs. Buckeye, at Columbus, Ohio.

TUESDAY, July 18th.—Trotting: Columbus, Ohio; Chicago, Ill. Base Ball: Orange vs. Mutual of New York, at Orange, N. J.; Chelsea vs. Hoboken, at Brooklyn, N. Y.

WEDNESDAY, July 19th.—Trotting. Columbus. Ohio; Chicago, Ill. Intercollegiate Regatta, Saratoga Lake.

THE MASSACRE.—Custer is dead! The gallant soldier and sportsman whom all knew and loved has "been cut off in his prime." The brave "Long-hair," the Indian's most dreaded foe, is gone, and the savage sings his war song of rejoicing and victory. The particulars of the sad catastrophe by which General Custer and his five companies of cavalry were entirely annihilated have already been flashed through the breadth and length of the land. Of the details and probable causes which led to the affair we shall ever remain in doubt, as none survived to tell the tale. It is but too probable, however, that, led on by his intrepid bravery, and under estimating the strength of his enemy, General Custer charged, sanguine of victory, only to find himself hemmed in by an overpowering force. And yet there is something still inexplicable about the fight. Three hundred men, intrenched, could hold out for a long time against an immense number of Indians, as witness General Reno's gallant stand. There is more probably to come in the way of detail than has reached us in the necessarily meagre dispatches.

SPORTSMEN'S ROUTES OF SUMMER TRAVEL.

GENTLEMEN seeking for desirable localities for summer vacations will find their choice greatly facilitated by reference to the numerous advertisements of popular routes printed in our columns, and a close examination of the special information given therein. Readers of FOREST AND STREAM look at sublunary matters from an aesthetic and not a commercial stand-point. They buy horses for pleasure and not for hauling merchandize; guns for diversion, and not for killing redskins, although their quest for game often leads them into the hunting grounds of the hair-lifters; fishing gear for pastime, and not for commercial emoluments; vessels for holiday cruises and not for transporting goods; gunpowder for the field, and not for blasting rocks. So, also, they patronize railroads and hotels, not for the commercial advantages they afford, but as means of quick transit to pleasant resorts and relaxation from business cares, and comfortable resting places for body and mind. As they have now learned to look to this paper for assistance in securing for themselves the highest gratification, with the least risk of disappointment, these advertisements have been prepared expressly for their service. Most of the lines advertised are not to be found in the general newspaper, so that he who examines our columns will be spared the vexation of fruitless search, or the necessity of purchasing and probing voluminous railway guides. The information given will be found most valuable.

The Maine Central takes the tourist by the preferred route to the Rangeley lakes, where the mammoth speckled trout of America dwell, and also penetrates to some of the choicest resorts in Maine.

The Intercolonial, recently opened, carries the traveller to the very threshold of the choicest hunting and fishing grounds of five of the Canadian Provinces—Ontario, Quebec, New Brunswick, Prince Edward's Island, and Nova Scotia—places hitherto accessible only by long and intricate journeys and old-time conveyances.

The Northern Railway of Canada reaches by an all rail and steamboat route the much talked-of districts of Muskoka, Magnetewan, and Nipissing, and the finest summer resort in the Province—Lake Couchiching—with its immense hotel, embellished with flower gardens and private drives over a mile and a half of its own territory, and supplied with every known appliance of attraction by land or water.

The Collingwood steamers traverse the north coast of Lake Superior and reach to the finest trout river in the world—where the trout grow to fabulous weights and sizes, not even attained by the fish of Rangely Lakes. If one desires, he can continue by steamer to Duluth and the great west beyond, or he can take the "Dawson Route" at Fort William, and by a series of steamer excursions and portages by wagon, traverse, in four days, the chain of lakes that form open communication with the Selkirk settlement in Manitoba, Winnipeg, and the Red River of the North, returning, if he elect, by steamer and rail through Minnesota to St. Paul.

The Chicago and North Western Railway opens up the wonderful resources of the great West, with its vast prairies and mountains, aboundiug in game birds, animals, and fish of infinite variety. Its branches cover all the country west, north, and northwest of Chicago, reaching to the waters of northern Michigan, of the southern coast of Lake Superior to southern Minnesota, and, if desired, to the Pacific coast.

The Grand Rapids and Indiana Railroad penetrates to the northern wilderness of Michigan and the home of the grayling, and not only grayling, but trout, black bass, pike, and muscalonge. Dogs, guns, and fishing tackle are carried free over this route, and the officers of the road make it an especial object to attract and provide for sportsmen. There is ample tavern accommodations along the line where one can at least be comfortable, if he can't luxuriate. *Camp cars* are furnished for fishing parties and families at low rates. This is a new feature, and offers to sportsmen comforts not known to their kith in Europe.

The Delaware and Hudson Canal Company's new railroad is the shortest route to the Adirondacks, saving tedious wagon travel, and taking the visitor to the very gateway of this Sportsman's Paradiso.

The Pennsylvania Central, with its extensive ramifications, will carry the tourist into the heart of the Alleghanies and the Blue Ridge, with its abundant game and romantic scenery.

The New Jersey Southern Railroad takes one to Barnegat with its rare fishing and shooting—bluefish in myriads, bass, weakfish, sheepshead, quail, ducks, geese, and bay-birds—extending to Cape May, Egg Harbor, and the various intermediate fashionable summer resorts.

The Long Island Railroad renders the salt water attractions of the Great South Bay, with its fish and wild fowl, easily accessible from New York, and brings to our very doors one of the finest sporting districts in America.

The south side of Long Island has been the summer resort of the Knickerbockers of New York for half a century. The trout in its streams, the bluefish and weakfish under the waters, and the wild fowl on the waters of the Great South Bay have made that favored spot a household word among pleasure seekers and sportsmen. The present season finds the hotels at Babylon, Bay Shore, Islip, Sayville, and Patchogue well filled, and with the general reduction in prices for board, economy, as well as comfort and pleasure, can be considered. The "south side," as well as all other parts of Long Island, can be reached by the Long Island, Flushing, North Shore and Central and Southern Railroads, now all under one management. Drawing-room cars are now on express trains. The time-table of these roads will be found in our advertising columns.

The New Haven steamers afford the most delightful route to the White Mountains and the Connecticut Valley, and the Erie road opens up the attractions of western New York and Pennsylvania.

This very cursory sketch shows that by the routes advertised in our paper the tourist can reach *all* of the most desirable summer resorts in the country; and we trust that both advertiser and subscriber will find it to their interest always to continue to use the FOREST AND STREAM as a medium for their profit and pleasure in all things.

GREENWOOD LAKE.—This is the nearest forest lake to the City of New York. It is twelve miles long, and affords excellent sport to the angler, while the surrounding wilderness furnishes small game in its season. The hotels on its charming borders afford every luxury, while its proximity enables the tourist to reach it in a brief time, it being about 60 miles from the city, some 48 by the Erie railway, and the remainder by an excellent carriage road. Those who have been in the habit of spending their summers there, and all persons interested in having an angling ground accessible and near by, will make it convenient to respond to the appeal of Wm. O. McDowell, through our advertising columns, urging the formation of an association for stocking and preserving Greenwood Lake with fish. A preliminary meeting will be held for this purpose on July 22d at the Brandon House, head of the lake. This lake now affords superb black bass fishing, and those who are interested intend to keep its attractions up.

MR. BERGH AND THE TURTLES.—At the instance of the Society for the Prevention of Cruelty to Animals, Mr. Eugene G. Blackford, the Fulton Market fish dealer, was recently arrested. The charge was that Mr. Blackford had violated the law in turning turtles on their backs and allowing them to remain in that position with their flippers tied together. The case was tried in the Court of Special Sessions, before three justices, on the 1st inst., and resulted in the acquittal of Mr. Blackford, the decision of the Court being that no case had been proved. The bulk of testimony certainly was in favor of Mr. Blackford's side of the case, and he was fortified with letters from eminent authorities, among them Professor Baird, certifying that turtles are more at ease, when in captivity, on their backs than on their bellies. Mr. Bergh, however, is not satisfied, and will probably take an early opportunity to test the question again.

MELONS.—Our good friend Mr. Chas. G. Kendall, of Port Royal, has forwarded us a crate of excellent melons from his plantation on Palmetto Island. With the exception of one or two, into which the rats had forced an entrance, they came in excellent order, thanks to the care exercised on board the "City of Dallas," of Mr. Herman Grepke's line. Received at this particular juncture, they were doubly welcome and refreshing.

Now, Buffalo Bill, Texas Jack, Wild Charley, Donald McKay, and the Warm Spring Indians, doff the sock and buskin, and don the stock and buckskin and march to the front! Good scouts are in demand, and real fighting plenty. Buffalo Bill, by the way, is, we believe, already with General Crook's command. Some of the papers are, we observe, speaking slightingly of General Crook as an Indian fighter. This is all wrong. General Crook was the first man to settle the Apache question in Arizona, and his abilities to deal with the savages are considered, there at least, of the highest order.

—The attention of sportsmen going to Canada, the Maritime Provinces especially, is called to the advertisement of the Intercolonial Railway in our columns. There is speedy and continuous connection now between Halifax and Quebec, and any person visiting the Bay Chaleur or points on the north shore of New Brunswick and Nova Scotia (Gulf of St. Lawrence), will find this the shortest and easiest means of access thereto. There are Pullman cars on the whole route from Halifax to Quebec.

CAUTION.—There is much danger in shooting woodcock in the summer season in thick cover, where the party numbers two or more. With a party of four shooting near Secaucus on the opening day were two young friends of ours, brothers. A line had been formed and kept up, but one dropped back, and his brother, turning to shoot at a bird which was behind him, put over two hundred pellets in his thighs, at fifteen or twenty yards distance. There was a narrow escape from death or frightful injury, and much unhappiness to two persons, yet no one was to blame—only it was July shooting.

OFF FOR CANADA.—The Editor-in-Chief is now absent on his customary salmon fishing cruise to Canada. He will travel over the entire newly constructed portion of the Intercolonial Railroad between Quebec and Shediac, and get such information as may be of value to sportsmen in future, and to the readers of FOREST AND STREAM in particular.

For twenty consecutive days the thermometer has ranged as high as 90° and over in the city; something unparalleled.

OUR CENTENNIAL LETTERS—NO. 6.

CAPE COLONY AND OSTRICHES—QUEENLAND AND THE DUGONG—NEW SOUTH WALES AND MARSUPIALS—TASMANIA AND ITS DEVILS.

IN the outskirts of Great Britain's space in the central part of the Main Building the Cape Colony of South Africa has a little inclosure in which she exhibits a great deal well worth our looking at. The implements, costumes, and wares of the natives are shown, and on the walls are a large series of heads and horns of the different African antelopes. Here are the short, harp-like horns of the timid little spring-bok; the longer, twisted ones of the pallah; the smooth spears of the water buck and the rough ones of the blau-bok; the long and perfectly straight horns of the gems-bok, twisted like a rope for half their length and smooth the rest of the way, and the strangely twisted, and spiral horns of the hartebeest, sassaby, koodoo, and eland. Some of our wealthy sportsmen should manage to retain these antlers to adorn their halls. Many skins of antelopes, lions, leopards, etc., are also shown, and examples of the vegetable products of the country. One case is given to the minerals, among which is to be seen a lenticular stone about three inches wide by one inch thick, which has a large and well-worn hole through the center. This is labeled "Used by the Bushmen for digging roots;" but no one could tell me how it was used. The most generally interesting thing here is probably the model of an ostrich-hatching oven, and the statistics of this new industry of ostrich farming. The oven consists of two compartments with a smaller compartment between them filled with hot water and steam. The eggs are taken when first laid, put into bran and let rest in one compartment for two or three weeks, at a continuous temperature of 102 degrees. They are then put into the other compartment and kept at 100 degrees. They are turned over every day, and at the end of the fourth week the shell at the end where the head of the chick is seen is cut through, so that the weak chickens can make their way through the thick shell as well as the strong. In a wild state not more than one-third of the eggs laid ever hatch out, because two-thirds of the chicks are unable to peck their way out. The young ostriches are tenderly cared for when hatched, and when only seven days old, and about as big as a Shanghai hen, are worth $50. The domestication of the ostrich in the Cape Colony assumes every year greater importance, and the industry promises to become considerable. It has been attended with such success that many large establishments have been created. Mr. Douglass has nearly 300 ostriches on one farm, and has sold many birds. When it is considered that a pair is worth from $1,200 to $1,800, the value of the property will be appreciated. Not all the eggs are hatched artificially, nor, perhaps, on the majority of farms. The London *Field* not long ago had an account of the farm of Mr. Kennear, of West Beaufort, which I am glad to refer to. On eight acres of land attached to his dwelling, and inclosed with fences, Mr. Kennear had thirty ostriches, nearly all raised by himself. The inclosure was sown with lucerne, and would suffice for nearly 100 ostriches if irrigation were more extended. A lodge and sheds were constructed for the protection of the young birds during the winter months, and the process of obtaining the feathers was there carried on. Three pluckings of feathers, when the ostriches were in full plumage, realized $240, or £120 per annum—about £8 per bird. In 1874, instead of selling the feathers on the spot, he sent them to England, and by that means each ostrich realized £10. One portion of the inclosure was divided into compartments, in each of which the ostriches were paired. At liberty in their wild state five females were often attached to one male, but Mr. Kennear only assigned one female to each male. They were coupled in July, began laying in August, and continued laying for about six weeks, after which they sat till October. About December they again began to lay for about five weeks, provided the young brood were removed. In the first season the hen would lay from fifteen to twenty eggs, but in the second much less. The male sat on the eggs more assiduously than the female. Mr. Kennear removed the young when they were sufficiently strong to be taken from the nest—one or two days after they were hatched. Requiring a warm temperature, they were placed in a deep box lined with sheep skins, the air penetrating by the cover. During the severe cold of winter the lodge was heated and kept closed. Their usual food was chopped lucerne, the stem of which they did not like; grain was also given to them, and, when strong, maize. Trefoil and vetches agreed with them, but they did not have iron nails nor metal buttons, to which many travelers asserted they were partial. They, however, required sand, earth, pulverized quartz, small bones, and plenty of water. Good wild male) birds yield about fifty feathers, which are worth £5 apiece.

All the dependencies of the British Crown are grouped right here together, and it is but a step from the Cape of Good Hope half-way round the world to Tasmania—the nearest civilized country to the South Pole. First of these may be mentioned Queensland, a vast colony in the northeastern part of Australia. In area it is about equal to three times that of Texas, and it has an extensive seaboard. It is a great grazing and agricultural region, and also has immense deposits of tin, copper, and other valuable minerals, and numerous gems. Statistics adorn the walls everywhere. The botanist will rejoice in the herbariums which are very neatly mounted on card board. The ferns particularly attracted my attention. Also in their timbers, of which they are justly proud; but the woods of Australia will be mentioned more particularly under South Australia. Queensland displays a large case of butterflies and moths, which rival those of Brazil in the richness of their tints, and do not display many mimetic forms. The eye is attracted from these bright forms to a great number of paintings of pastoral and farm life in the Colony, which are not only highly instructive, but very pretty; and to photographs and crayon sketches of the aboriginal Australians, which are also highly instructive—but very ugly. One large picture represents a "black fellow," as the native is called, in the act of throwing a boomerang. He is throwing it from above the shoulder. He holds in his hand an oblong shield made of a thick piece of wood rounded on the outside, and with the handle carved out of the substance of the inside of the piece. This shield, called "heilaman," is only about 20 inches long by 8 wide, and several of them, as also of the boomerangs, are exhibited. Sometimes they are diamond-shape. There are also some very pretty pictures of the satin and the speckled bower-birds, which have the curious habit of building a nest underneath an arch or "bower" of grass which they bend over it, something as our meadow-lark occasionally does. All around this bower the bird carefully arranges, apparently purely for ornament, every bright little object it can bring—shells of all sorts, bits of glass, petals of flowers, shining pebbles and fragments of quartz—anything that is pretty; and it takes great pride in its museum. But the central point of interest to the naturalist in the Queensland exhibit is the skeleton, etc., of the dugong. The dugong closely resembles the manatee of the Florida coast. It is a native of the Indian Archipelago, and is exceedingly numerous on the coasts of Ceylon and northern Australia. Its favorite haunts are the mouths of rivers and straits where the depth of the water is but three or four fathoms and where, at the bottom, grows a luxuriant pasturage of submarine algæ and fuci. Here, in calm weather, may small troops be seen feeding below the surface, and every now and then rising to take breath. The position of the mouth, the muscular powers and mobility of the lips, garnished with wiry bristles, and the short incisor tusks of the upper jaw, enable these animals to seize and drag up the long fronds of subaquatic vegetables which constitute their nourishment. The dugong is in high esteem as an article of food by the Malays, who attack the animals with harpoons. There are several species, in one of which the animals reach a length of over 20 feet. It has lately been discovered that the oil of the dugong was not only the best known for table use, but also had remarkable medical properties, serving the purpose of cod-liver oil, and being of pleasant taste. The obtaining and refining of this oil is coming to be a large industry in Queensland, and it is already largely exported. Mr. Angus Mackay, the genial Commissioner, has brought to the Philadelphia Academy of Sciences a perfect dugong in spirits; and the skeletons and skulls which are now on exhibition will finally go to Prof. Edward D. Cope.

Immediately south of Queensland lies New South Wales, comprising the south-eastern "corner," so to speak, of Australia. Its area is about that of the United States south of Virginia and east of the Mississippi river; but with less coast-line. Its main wealth arises from wool-producing, the exports of which in 1874 were $25,000,000. Its mineral resources include great beds of coal, a kerosene shale which is even greasy to the touch, iron, copper, tin, lead, gold, silver and diamonds. The climate is salubrious, and civilization is extending everywhere. Its population is over 600,000. It is the oldest of the colonies, having been settled in 1788, when the merino sheep were introduced. The sources of the wealth, and the arts of the citizens are shown in great variety, but the naturalist will also find plenty for him. The tools and implements of the natives are in abundance. There are their wooden spears with one, two and three barbed prongs, the barbs being armed with shark's teeth; short-handled paddles highly ornamented with carvings; boomerangs, tooth-mounted clubs, and clumsy wooden shields, but no bows or arrows. Among the rest are stone-hatchets which Mr. Samuel Davenport, the very kind Commissioner, told me the natives call "mogo." He also told me how they were made and used. A piece of basaltic or jasperoid rock of suitable shape, is first found in the bed of some torrent, and then ground down to an edge upon a hard fine-grained sandstone found in some districts, where the natives assemble and remain for days grinding their implements. These well-used sharpening rocks are scattered over the whole colony. The edge having been completed they select the stem of one of three favorite vines, and by the action of fire make it pliant for a handle. Some of the resinous and brittle gum of the grass-tree (Xanthorræa) is then procured, and toughened by fire and kneading. They then embed the centre of the stone, and, taking one or two turns with the pliant handle, secure its junction with a thong of the bark of the coorajong tree; all that part of the handle around the stone is then secured with melted gum, and in a few hours it is ready for use, and looks like a small ax. By the aid of the sharpened part of this instrument, they succeed high trees, cut out the opossum or tap the tree for honey, fashion boomerangs, "waddies" (clubs) and other wooden weapons, and with the head of the mogo will crack the bones of animals for marrow, or use it in any other rough way, always carefully avoiding to use unnecessarily the sharpened edge. They also have chips of flint which they use as knives, and in tattooing.

These exhibits give an excellent chance to examine the marsupial animals of Australia. Each province displays more or less of them, and New South Wales shows a specially fine series of the duck-bill (*Ornithorhynchus paradoxus*) which deserves a special article by itself, and may get one at some future day. There is also to be seen a large series of kangaroos, no less than 10 species being represented, most of which are known in Australia by the native name of "wallaby." Besides these the collection includes the native bear, the vulpine phalanger, the wombat, the two species of *Dasyurus*, two water-rats, and the large bat called the "flying fox," whose wings spread two or three feet, and the *Echidna* which is like an ant-eating porcupine. There are several cases of birds, comprising 237 species, with male and female specimens, some of which are carefully mounted, and others only in skins or in spirits. The display of reptiles and amphibians is small but interesting. A lot of emu's eggs, and some skins of the emu—a bird like the ostrich—attract much attention. Some of the eggs are mounted in the most exquisite devices of silver representing native scenes and sports, their dark green surfaces contrasting beautifully with the soft glow of the silver's white.

I am spending so much time in this Province, that I fear its neighbors will accuse me of partiality, but I must speak of the indigenous woods, which, indeed, are also found throughout most of the continent. A large variety is shown by each province, both polished and unpolished. In general the woods are characterized by great density and toughness, and are nearly all "hard" woods, so that it is necessary for the colonists to import deals. The trees are mainly "gums," as those of the large tribe of the *Eucalyptus* (honey or fever trees) are called, and are very useful as timber. There are also myall, sandal-wood, cypress, native fruit trees, lance-wood, nut-meg, cabbage palm, "wattle" in large variety, "he-oak," "she-oak," and very many others, some named from their bark which is useful in tanning, or for medicinal properties, such as the making of quinine.

One word on Tasmania—an island 120 miles or so south-east of Australia, which has a delightful climate, and is rapidly taking rank with the leading States of the Southern Hemisphere. The amount and character of her displays are astonishing. She was very unlucky, however, a large amount of her goods, as also of the other Australian States, having been ruined by the shipwreck of the vessel in which they were sent. Her show of skins of the kangaroo, viverra, flying squirrel, cat and other native animals, and of the penguins and grebes, tanned and made up into garments and robes is capital. She has also many stuffed animals, birds, and some shells to catch the eye of the zoologist. The most remarkable of all her remarkable animals is the Tasmanian devil, so called on account of its utterly untamable ferocity, and sullen purposeless anger. It is about 21 inches long, is in shape something like a cat, but with strong digging claws on the fore feet, while the hind feet are like a bear's, so that the animal can sit upon its haunches. It has teeth much like a bear also, and great strength in its jaws. Few dogs will go near it, and it was immensely destructive to sheep and poultry, until it was reduced in numbers. It is nocturnal and rather sluggish except when excited. Its fur is long, and of a deep dead black, with some white on the breast.

GAME PROTECTION.

CONNECTICUT.—The following is a list of the public acts passed by the General Assembly of Connecticut, May Session, 1876, of interest to the readers of FOREST AND STREAM:

Protecting fish in Amos Lake, Preston.

Granting GREATER liberties to pound fishermen.

We can't understand why or how such an act should be passed, as our shores are about entirely depleted of fish already by pound nets.

Act allowing woodcock shooting in July, September, October, November, December, and January.

Resolution appropriating $3,000 for the artificial propagation of fish, notwithstanding our Higganum friend's protest.

FLORIDA.—A correspondent sends the following:—

SANFORD, Florida, June 28th, 1876.

EDITOR FOREST AND STREAM:—

What ought to be done with a fellow who owns a dog and gun, edits a newspaper, professes to be a sportsman, and who can still get off a "local" like the following "copy:"

"Quail hunting is splendid here about jest now. All that is needed to get a good mess of birds is a good bird dog, a good gun, and some one at the kicking end of the gun that knows how to wing 'em."

That gun ought to express its disapprobation of such unsportsmanlike conduct by kicking him down and then stamping on him until he learned to let birds alone while out of season. Can't your valuable journal lend us your assistance in getting a good game law for this State? We need it badly. F. L. R.

The game laws of Florida certainly require attention and revision. This can only be accomplished by resident sportsmen forming themselves into game protection association and keeping the matter before the Legislature, bearing in mind their large visiting winter population, and so framing their laws that they shall bear on all alike; making no discriminations between residents and non-residents, and giving all their energies to such a thorough enforcement of the close seasons that their organization will be "protective" in something more than name alone.

MERIDEN, Ct., June 29th, 1876.

EDITOR FOREST AND STREAM:—

To-day the substitute bill allowing the killing of woodcock from July 1st until February 1st, excepting the month of August, came to the House from the Senate, passed, and after some discussion, in which an opponent of the bill very sensibly remarked that each successive session of the Legislature was called upon to change the game laws, the bill was passed as usual.

There has been considerable feeling among the sportsmen of this State in regard to the matter, many hoping that the law would not be changed, while another portion of our sportsmen worked hard, and presented a petition which, as stated above, was successful. The arguments generally used by those in favor of July shooting are, that it gives the sportsmen of Connecticut the same chance as those of New York and Massachusetts, where July woodcock shooting is permitted. They also say that birds disagree from their breeding grounds after July and scatter about, and that the shooting becomes rather unsatisfactory and unprofitable, while in July, if one has kept his weather eye open he can go and hunt up brood after brood and slay them with ease; in fact, you know just where to put your hands on them. Of course this rather spoils the fall shooting, when the woodcock are in prime condition, and are able to fly so well that to drop one sailing through the trees is really sport, and one feels that the noble bird has had a pretty fair chance for his life, which is, I believe, the secret of true sportsmanship; but this, I am sorry to say, is not the principle on which some of our hunters operate, they believe more in "a bird in the pot is better than two in the bush," and I fancy it will take a long time to make them think otherwise. The members of the Connecticut Game Association and many other true sportsmen of this State, who convinced

our law makers in 1875 that the shooting of woodcock in July was detrimental to the preservation of this prince of game birds, must feel deeply disappointed with the law passed to-day.

Not woodcock alone will suffer, but it opens the door for the destruction of our partridges, which are just in such a condition as to make them an easy prey to unprincipled hunters, and doubtless as many partridge will be killed as woodcock. VON G.

We have expressed our opinion so often regarding summer woodcock shooting that it is almost unnecessary for us to repeat it. If on no other ground, it should be abolished to preserve the young ruffed grouse which are shot in immense numbers in July by pot hunters, who are privileged by the woodcock law to go into the woods and slaughter everything, the young grouse being served at watering-place hotels, either openly as chicken partridges, or disguised as "owls." That woodcock are not always old enough to be shot on the 4th of July we have ample evidence. A friend tells us that he killed an old bird and then captured with his hands a young one unable to fly, near the spot from which the first had flushed.

—The Board of Directors of the Illinois State Sportsmen's Association are Edward C. Waller, Audubon Club, 88 East Washington st., Chicago; E. F. Gale, Chicago Shooting Club; George Sherman, Kennicutt Club; David F. Reed, Evanston Gun Club; Harvey Miller, Quincy Shooting Club.

Shot Gun and Rifle.

GAME NOW IN SEASON.

Woodcock, *Philohela minor.*
Black-bellied plover or ox-eye, *Squatarola helvetica.*
Ring plover. *Ægialitis semipalmatus.*
Stilt, or long-shanks, *Himantopus nigricollis.*
Red-breasted snipe or dowitcher, *Macrorhamphus griseus.*
Red-backed sandpiper, or ox-bird, *Tringa americana.*
Great marbled godwit, or marlin, *Limosa fedoa.*
Willet, *Totanus semipalmatus.*
Tattler, *Totanus melanoleucus.*
Yellow-shanks, *Totanus flavipes.*

"Bay-birds" generally, including various species of plover, sand-piper, snipe, curlew, oyster-catcher, surf-birds, phalaropce, a vocets, etc., coming under the group *Limicolæ* or Shore Birds.

THE WOODCOCK SEASON.

THROUGH some error of the act, the woodcock season opened in this State on July 3d instead of July 4th, as was evidently intended, and as it does in New Jersey. We are in receipt of a large number of communications from various parts of both States, from which we gather that woodcock are more abundant this season than they were last, while owing to the extended drought which has of late prevailed the birds have left their usual feeding grounds and retired to the recesses of the most impenetrable swamps, and small bags are the result. We have confirmation of this in the fact that several gentlemen who have penetrated to such places have found birds congregated in considerable numbers. With the first heavy rains they may be again found in their usual feeding grounds. It is a fact worthy of notice, that very many young birds, still unable to fly, have been seen, and another argument in favor of abolishing summer shooting, or at least extending the close season. Another indication of abundance is the market price. Woodcock were retailing last week for 50 cents and 75 cents per pair, and the dealers report that they have not been so plentiful for years. Rhode Island is sending a large number of birds to this market.

Sussex Co., New Jersey, has long been a favorite woodcock ground, but a severe hail storm which visited the county in the spring, particularly in the neighborhood of Newton, killed off many of the young birds. Mr. Theo. Morford, of Newton, and son, killed six on the morning of the 4th, all but one old birds. The Messrs. Woodruff, of the same place, got eighteen. One correspondent writes as follows from Hackensack:—

"The birds were quite numerous in our neighborhood until within a few days, and yesterday, to the disappointment of many sportsmen, they had disappeared. My theory is, that the extreme heat and drought has driven them into the mountains. The reports from a number of sportsmen I have spoken with to-day all agree that the birds have recently moved into other regions. W. H."

Another writes from Paterson:—"I was out two hours on the 4th. Got six the first time and four yesterday. The villainous pot-hunters kill them all off about here in June. Lots of quail and partridges in Sussex." Mayor De Russy writes from New Brunswick:—"Only killed nine cock on the 4th; since then have killed four or five. Birds scarce: ground all dried up." A correspondent writes from Hanover Neck, N. J., a noted snipe and woodcock ground:—

"Daylight was just hovering over the quiet village on the morning of the 4th, when I started forth. Though other birds were scarcely awake the woodcock were lively enough but as usual very shy. Just as soon as I could see clearly I commenced to shoot. Fan and Jeff, my good dogs, were eager assistants. By the way, Fan is one of the best English setters to be found, and Jeff is one of the Saltus dogs. Before eight o'clock I came home with thirteen splendid birds. After breakfast I again started, and by noon procured six or seven more, and at night I had twenty-nine, while a company of seven obtained thirty six. You that know nothing by experience of such pleasure cannot realize our feelings as we surveyed our handsome bag of game. Before commencing the duties of the following day I shot nine more, while the company referred to above only shot eleven. The nine I gave to the poor and sick among my neighbors, so that some good results, or at least some good meals came from my woodcock shooting. By ten o'clock on the 5th of July I had shot forty-six birds since the commencement of the season. The woodcock in this place are uncommonly fine and plenty this season. A. D. W."

Our Philadelphia correspondent writes:—

"No respect is felt here for the natural law that woodcock should not be killed in summer, and even less, (excuse the Hibernicism), for the legal close law that July 4th shall be the beginning of the time. Those who go after the mud borers anywhere in the vicinity of Philadelphia will find that few of them have escaped."

Another writing from Hazelton, Pa., says:—"I got fourteen good birds in four hours."

Our accounts from New York State are somewhat meagre. A correspondent who visited Sullivan County, says: "This part of the county, at least, is a sell as far as woodcock are concerned. I could have found more birds within a mile of boune." A fair number of birds have been killed, principally by market gunners, on the north side of Long Island, but on the south side birds are very scarce.

Here is what Mr. Holabird writes us from Indiana:—

VALPARAISO, July 5th, 1876.

EDITOR FOREST AND STREAM:—

I was one of the many thousand, who regardless of heat or rain participated in the celebration of the opening of the woodcock shooting and my bag was five full fledged birds. I might have got more, but eleven o'clock found me completely fagged. It takes close work to stop a woodcock with a choke-bore, and I found it necessary to permit them to get as far off as I could see them before shooting. They were delicious eating, but I fear that others will kill the birds about here. "The spirit is willing but the flesh is weak," and for comfort's sake I propose that the season open August 15th. We unfortunately have no close season for woodcock, but out of respect for the bird, and for the influence it may have over other sportsmen, I would not shoot them until July 4th. A sportsman from New York spent some months here the past spring and to my disgust I learned that he was shooting young cocks, in June. I called him a pot-hunter—a disgrace to the fraternity, and suggested that he was needed in New York, and he went. I'll not indulge in names, for he is a good fellow in a general way and reads the FOREST AND STREAM, but he made a mistake shooting woodcock in June in the same neighborhood with me. Generally speaking I'm peaceful and not disposed to quarrel, but it made me terribly "riled." Its only about seven years ago that woodcock commenced nesting here, and are now becoming more plentiful. A few years more and we will have glorious shooting. I am making inquiries as to the chicken shooting and will write you again soon. W. H. HOLABIRD.

NEW BEDFORD, July 7th, 1876.

EDITOR FOREST AND STREAM.—

The season for woodcock shooting has commenced, but our long and severe drought has rendered their usual haunts much of the nature of a city pavement, so that "bill-sticking" is utterly impossible. Gus White, our veteran gunner, in a day's hunt only shot seven, and others report no birds to be seen. CONCHA.

—Our correspondent "Teal" writes from Salem, Mass:—

"The woodcock season has opened. Advices from Woburn, Mass., give as follows: ten birds to two guns, twelve birds to two guns; at Salem, one bird to two guns, two birds to two guns. Some of the oldest shooters think the birds are in the moult The grounds are very dry and we need rain."

On Monday evening of this week a woodcock, not having the fear of the skill of the Newark, N. J., sportsmen before his eys, alighted on Pleasant avenue in the midst of that city, when it was discovered and brought to bay by our shooting friend Mr. Hobart. The bird, although fully grown, was rather thin in flesh, in consequence, it is supposed, of having been chased up and frequently shot at before the season opened by the pop shooters of that city. Another woodcock was flushed recently in the centennial grounds, in the immediate vicinity of our Hunter's Camp.

PENNSYLVANIA.—Greenville, Pennsylvania, boasts a Sportsman's Club of forty members. Recently they held their regular pigeon tournament, comprising matches of five and ten birds, and one at double rises. In the first Mr. J. C. Worst took first money, L. B. Arkwright second, and J. F. Nelson third. In the ten bird match Mr. H. Crosthwaite was the only one who killed his ten birds straight, Messrs Worst and Nelson dividing second money, Arkwright taking third, and Geo. Miller fourth. In the double rises at three pairs, H. Adset took first, D. Streeter second, and J. F. Nelson third prize. A number of other matches and sweepstakes wound up the tournament.

RHODE ISLAND.—*New Port, July* 10. The bay birds have begun their flight. A small bag, consisting of yellow-legs, dowitchers, and one Wilson's snipe, was made by a party on the marsh near Easton's pond last Friday. SHOT.

NEW CLUB.—A correspondent writes from San Francisco, Cal., under date of June 26: "A Pigeon Shooting Club has been established in this city under the name of the Forest and Stream Pigeon Shooting Club, with a view to encourage the use of the gun and to enforce the game laws of the State. The club will hold its first shoot within two weeks, and the first prize will be a gold medal, with the face inscribed as follows: 'Forest and Stream Champion Medal, San Francisco, California, 1876.' The Club has adopted the no boundary rule, which seems to give good satisfaction among the members of the Hit or Miss Club of this city. It has also adopted the H. and T. ground traps for the first time in California. I will inform you of the result of the new club shoot as soon as it takes place. QUAIL."

PROFITABLE HUNTING IN TEXAS.

EDITOR FOREST AND STREAM:—

As I contemplate taking a small party West, for a hunt, (mention of which is made elsewhere in your paper,) I will give you a slight description of my last hunt in that region. On August 16th, 1875, a young man from the East, a young Texas ranchero, and myself started from the ranch on the Arryo San Geronimo, about thirty miles northwest from San Antonio, on our yearly hunt to the clear fork of the Brazos River, by way of the head of Rio Medina above Horse Valley settlement. After due preparations we left the ranch about 2 P. M. We successively crossed the northwest fork of San Geronimo, Bluff Creek, and Pipe Creek, along which are some of the finest scenery and most flourishing settlements on the southwest frontier, and passed through Bandera, the county seat, as well as settlements in Monroe and Horse Valley. We now arrived at the head-waters of the Medina, which is surrounded on all sides by rugged hills with here and there a beautiful valley. Here is the home of red deer. Here we passed a few days in the fascinating sport of lining bees among the timber, on the low flat mesas, taking several hundred pounds of fine honey in the comb, besides killing many deers and bears, and countless turkeys and partridges. We found our long range rifles to be just the thing on this trip, being the two banded United States needle guns. Leaving the Medina behind us we crossed the Guadalupe to the "Jeemes," a branch of the Llano, and also the main stream, finding an abundance of fine sport and plenty of game, and a beautiful country. Leaving the Llano we struck out for Camp Concho, on the Concho River, a large United States Post, situated at the southern limit of the buffalo country, spending a few days at Concho, gathering pecans, visiting the fine springs at Kickapoo, hunting and enjoying ourselves generally. Leaving Concho, we struck the buffalo country where we spent a few weeks hunting buffalo, pelsoning wolves, shooting antelopes, etc.; and at length, on September 25th, reached Griffin, the last frontier settlement of any size east of Llano Estacado. After a short stay at Griffin, we started for home, October 1st, by Camp Colorado, arriving safely after some twelve days travel with 350 buffalo hides worth about $2.50 each; 600 wolf skins worth $1 50 each; 200 deer hides worth $1 each; 150 pounds of honey worth 12½ cents a pound, and sundry deer hams dried and smoked, which in all netted us the snug little sum of $2,500. The trip was highly enjoyed by all, and we were well satisfied with the profits. I am about returning with a friend or two to take very nearly the same trip, and there is a chance for two or three more sportsmen to join the party according to the notice inserted in another column. CAMP BRADY.

CREEDMOOR.—The event at Creedmoor on Saturday was the eighth competition at short range for the *Turf, Field and Farm* badge. The weather was so unbearably hot that the number of competitors was smaller than is usual in the contests for this trophy, but twenty-eight appearing at the firing point. The conditions were ten shots each at 200 yards, off-hand. Mr. D. F. Davids was the successful man, with a score of 44 out of a possible 50 points. The total scores were as follows:—

Name.	Total.	Name.	Total.
D. F. Davids	44	W. B. Farwell	37
W. Roberston	41	Thos. Lloyd	36
D. E. Vennett	41	W. C. Clark	36
C. E. Huntington	40	H. W. Gourley	35
Henry Fulton	40	J. W. Todd	35
G. A. Bonillier	39	J. P. M. Richards	34
E. H. Holton	38	J. Shand	34
T. R. Murphy	39	Lewis Cass	34
Alexander Pyle	39	W. S. Jones	33
J. N. Bruyn	38	Thos. Lloyd	33
L. C. Bruce	38	J. L. Allen	32
J. A. Gee	38	G. F. Merchant	30
J. E. Irwin	38	E. H. Madison	26
W. H. Cochran	37	Geo. Waterman	25

NEW YORK.—At the shoot of the Saratoga Rifle Club on the 4th inst., prizes were won as follows:—Badge for 200 yards, off-haud, Wimbledon targets, by N. F. Howard, score, 42 out of 50. Badge of Honor, by Jerome Pituey; distance 500 yards; score, 69 out of 75. Bull's-eye Badge, for the greatest number of bull's-eyes, at 800, 900 and 1,000 yards, by Odell Gates.

Rifle match at Blooming Grove Park, July 6th, 1876, 200 yards, off-hand. Prize, anuy pistol:—

Name.	Score.	Total.	Name.	Score.	Total.

ILLINOIS.—The Chicago Rifle Club contended on the 18th inst. for three prizes of law books, offered by the firm of B. Callahau & Co., and valued at $50. The shooting was off-hand, at 200 yards, 3 sighting and 15 scoring shots. As will be seen, Walter Burnham took first prize; S. W. Burnhaus second, and O. C. Blackmer third. The following is the score, out of a possible 75:—

Name.	Total.	Name.	Total.
Walter Burnham	62	d. Fuller	52
S. W. Burnham	60	d. A. Shafer	51
O. C. Blackmer	58	R. S. Thompson	51
J. W. Roberts	58	H. W. S. Cleveland	45
H. G. Howe	56	T. Dradwell	20
Clark Burnham	56		

WISCONSIN.—The sixth competition at 500 yards, for the Brodhead field glass prize came off last Friday. It was the general feeling among the boys that this would wind up the competition. Fielding and Bangs having each won the glass twice, both felt sure of winning. Fielding starts in with two outers and gives it up. Bangs smiles, he never makes outers; has a sure thing now; that glass will come in handy for the Fourth of July. Just what he needs to view the balloon ascension. Turner don't say much, but means business. Now is his opportunity. That glass well won is as good as forty dollars saved. He works hard, but takes the smile from Bangs, and wears it himself. But takes the smile from Bangs, and wears it himself. But only for a short time. Yale came in a little late, but lies down at "length" to business; gets away with all the boys, and wins the glass once, with a score of 71 out of a possible 75:—

Name.	Total.	Name.	Total.
Fielding	65	Turner	67
Bangs	66	Johnston	47
Alison	49	Yale	71
Hawley	40		

WAU WAU.

AN INTERNATIONAL MATCH.—A match was shot at Oswego on the 4th, between teams of six men each, from the Forty-ninth Hastings' Rifles, of Belleville, Canada, and the Twenth-eighth Regiment N. G. S. N. Y., of Oswego, resulting in a victory for the latter. Seven shots were fired from each range, with the following result:—

AMERICAN TEAM.

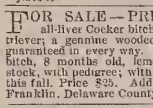
N. R. A.—We have received the Report of the National Rifle Association for 1875. In addition to the reports of the various officers and committees, it contains a list of the various matches of the Association, with scores, etc., also the principal matches of affiliating clubs, and a detailed account of the last International match at Dollymount, with diagrams of targets, etc. Much interesting matter, valuable also for reference, is included in the pages of the last Report.

HORSE LAWS.—It has been decided that when a horse or carriage is let out for hire for the purpose of performing a particular journey, the party letting warrants the horse or carriage fit and competent for such a journey. If the hirer treats the horse or carriage as any prudent man would do, he is not answerable for any damage that either may receive. But he must use the horse for the purpose for which he hired him. For instance, a horse hired for saddle must not be used in harness. If the hirer violates this express condition of the contract, he is liable for any damage that may occur. If the horse is stolen through the hirer's negligence, such as leaving the stable door open all night, he must answer for it. But if he is robbed of it by highwaymen, when traveling the usual road at usual hours, he cannot be held for damages. As these questions are frequently in dispute, these decisions may be interesting.



The Kennel.

STUD DOG.—ROBINSON'S "JACK," the famous red setter, brother to Scott Rodman's Dash (now dead), is offered for stud purposes at $25 for service. Address W. H., at this office. jn13-tf

FOR SALE—PRICE $50.—A FINE all-liver Cocker bitch, 2 years old; a good retriever; a genuine woodcock and grouse dog; fully guaranteed in every way. Also a fine English setter bitch, 8 months old, lemon and white, from good stock, with pedigree; with a little work can be used this fall. Price $25. Address ROBERT WALKER, Franklin, Delaware County, N. Y. jo13-2

RED IRISH SETTER PUPS FOR sale—Sire, imported red Irish Don, Dam, Mand, grand dam Gypsy by Rodman's Dash; full pedigree given by inquiring of C. MILEY, Lancaster, Pa. jn12-5t

LISTEN!

The Sportsmen's Bell tells the position of the dog, causes the birds to lie closer. Rapidly coming into use in early woodcock shooting, ducking and general shooting, where the cover is thick. Sold by dealers in guns and sporting goods BEVIN BROS. MANUFACTURING CO., East Hampton, Conn. Jn6 3m

SPRATT'S

Patent Meat Fibrine Dog Cakes.

They contain meat and that anti-scorbutic fruit, the date (the only substitute for fresh vegetable), and the exclusive use of which in the manufacture of dog food is secured to us by patent; they will keep dogs in perfect condition without other food, and obviate worms. Every cake is stamped "Spratt's Patent." Be sure to observe this. For sale by F. O. de LUZE, 18 South William St., N. Y., in cases of 1 cwt. apl3

FOR SALE—FULL GORDON SETTER Pups, over four months old. Both sire, Tom, and dam, Jinnie, are very hard to beat on quail and grouse. Pedigree given. Imported Red Irish Setter DON will be allowed to serve bitches. Inquire of ap120 H. B. VONDERSMITH, Lancaster, Pa.

HENRY GARDNER, M. D., HAS CONSTANTLY on hand and for sale, medicines adapted to the cure of all diseases. Dealer in sporting dogs of every variety. Dogs trained for reasonable compensation. Broadway and Fiftieth street. Oct 22

The Infallible Fish Bait.

Having perfected a suitable Paste for Fish Bait, the undersigned offers same to the sporting fraternity, assuring them that it will prove more remunerative than any known substance for the purpose of angling. It is of a pale white color, square in form. By soaking in water a few seconds it becomes pliable. Taking a small piece, size of a pea, and pressing the same on or about the eye of the hook and using regular bait, any angler can kill to his heart's content. Price 2 cents each, post paid. Address JOS. LABADIE, Galveston, Texas. Jn6 3m

Founded July 4, 1809.

Shot and Bar Lead

MANUFACTURER,

Office, 121 Walnut St., Philadelphia.

Northern Railway of Canada and Collingwood Lake Superior Line.

ONLY FIRST-CLASS ROUTE TO THE BEAUTIFUL INLAND LAKES OF CANADA AND LAKE SUPERIOR.

Three express trains daily north from Toronto. Steamers leave Collingwood every Thursday at 6 P. M., on arrival of steamboat express, leaving Toronto at noon.

Lake Couchiching
AND THE
Lakes of Muskoka

Are the coolest and most delightful Summer watering places in Northern Canada. Tourists proceeding down the St. Lawrence can make a pleasant detour from Toronto to Couchiching in five hours on express train with Drawing Room Coaches, thus visiting the most charming of the chain of Lakes.

Excursion Tickets

At greatly reduced rates during months of July, August and September; may be had from COOK, SON & JENKINS, 261 Broadway, New York and Centennial Grounds, Philadelphia.

ALFRED TELFER,

Gen. Agt. Northern Railway, Toronto. Jn6 2m

The Rangeley Lakes

VIA FARMINGTON AND PHILIPS.
THE ORIGINAL AND ONLY DIRECT ROUTE TO THE RANGELEY LAKES, THE FAVORITE HAUNT OF THE DEER AND TROUT, IS BY

Maine Central Railroad

TO FARMINGTON, AND THENCE BY STAGE TO THE LAKES.

Train leaves Portland daily, at 1:20 P. M., or on arrival of trains from Boston, for Farmington and Rangeley Lakes, arriving at Farmington at 6:35, making close connection with stages for Phillips and Greenvale. Round trip tickets from Boston Eastern or Boston via Maine Railroads to Rangeley Lakes and return by the way of Farmington, $14.00, Portland, $14.00.

The Maine Central is also the only land route to Moosehead Lake. Tickets from Boston to Mt. Kineo House and return only $16.00, Portland $12.00.

Special rates for parties can be obtained by addressing F. E. BOOTHBY, General Ticket Agent Maine Central Railroad, Portland.

THE "FISHING LINE."

Brook Trout and Grayling Fisheries
OF NORTHERN MICHIGAN, VIA
Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equalled, in the great abundance and variety of fish contained.

Brook Trout abound in the streams, and the famous American Grayling is found only in these waters.

Brook Trout Season opens May 1st.
Grayling season opens June 1st.
Black Bass, Pike, Pickerel, and Muscalonge are also found in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st, Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities offered to tourists and sportsmen; also on and after July 1st Mackinaw and Lake Superior Excursion Tickets.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, Send to Forest and Stream office, or address

J. H. PAGE, G. P. & T. A.,
may4 4m Grand Rapids, Mich.

FOR NEW HAVEN, HARTFORD, Springfield, White Mountains, Montreal and intermediate points. The new and elegant steamer C. H. Northam leaves Pier No. 25, East River, daily (Sundays excepted) at 3, and Twenty-third street, East River, at 3:15 P. M. A passenger train will be in waiting on the wharf at New Haven and leave for Springfield and way stations on arrival of the boat.

NIGHT LINE.—The Continental leaves New York at 11 P. M., connecting with Passenger train in waiting on wharf at New Haven, leaving at 5:15 A. M. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Excursion to New Haven and return, $1.50. Apply at General Office, on the pier, or to RICHARD PECK, General Agent. my23 tf

LONG ISLAND RAILROAD.
LESSEE, FLUSHING, N. S. AND CENTRAL AND SOUTHERN R. R. OF LONG ISLAND.

Trains leave Long Island City as follows:—

From F. N. S. and Central Depot north of Ferry—For Flushing (Bridge street), College Point and Whitestone—6.35, 8.20, 9.10, 11.03 A. M.; 12.25, 1.35, 3.04, 4.05, 5.03, 5.31, 6.05, 6.31, 7.03, 7.35, 8.55 P. M.; 12.01 A. M.

For Flushing (Main street) and Great Neck Branch—6.35, 7.35 A. M.; 1.40, 5.31, 7.03 P. M., and 12.01 A. M. Saturday nights. For Main street only—9.04, 11.03 A. M.; 12.05, 2.05, 3.04, 4.33, 5.04, 6.05, 6.31, 7.55 P. M.

Ferry boats leave New York, foot of East Thirty-fourth street, every fifteen minutes previous to the departure of trains.

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road, radiating from Chicago. Like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escamaba, to Negaunee and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching westward from Elroy, it sends forward through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kaneska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and, the A. M. L. & J. Illinois Central, reaches Warren, Galina and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Nevada, Boone, Grand Junction, to Council Bluffs and Omaha. This last named is the "GREAT TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento, San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEESE, AND BRANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing in hundreds of points on the Northern and Northwestern lines of this company will be found unsurpassed by any in the West.

MARVIN HUGHITT, Gen. Supt., Chicago.
W. H. STENNETT, Gen. Pass. Agt., Chicago.
ap16

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMP'Y

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

The Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEECH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

D. M. BOYD, Jr., Gen'l Pass. Agent.
FRANK THOMPSON, Gen'l Manager. feb17 tf

NEW YORK & LONG BRANCH R.R.
CENTRAL RAILROAD OF N. J.
ALL RAIL LINE BETWEEN NEW YORK, LONG BRANCH, OCEAN GROVE, SEA GIRT AND SQUAN.

Time-table of June 19th, 1876: Trains leave New York from foot of Liberty street, North River, at 7.30, 9.00, 11.45 A. M., 1.45, 3.45 4.30 and 6.00 P. M. All trains run to Long Branch. The 7.30, 9.00, 11.45 A. M., 1.45, 3.45, 4.30 P. M. trains run through to Sea Girt and Squan.

Stages to and from KEYPORT connect at MATTEWAN STATION with all trains.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close, and with *great penetration.* For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12½, and 6½ lbs, and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

88 Wall Street, New York.

SPORTING, SHIPPING AND MINING

POWDER.

DUPONT'S GUNPOWDER MILLS

(ESTABLISHED IN 1801),

Have maintained their great reputation for 75 years. Manufacture the Celebrated

EAGLE DUCKING, EAGLE RIFLE, AND DIAMOND GRAIN POWDER.

The most Popular Powder in Use. Also,

Sporting, Mining, Shipping and Blasting Powder

Of all kinds and descriptions.

For sale in all parts of the country. Represented by

F. L. Kneeland,

Feb 10-1y 70 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The *strongest* and *cleanest* Powder made. Nos. 1 to 7, packed *only* in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6½ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes FG, FFG, FFFG, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6½ lbs., and in canisters of 1 lb. and ½ lb.

All of the above gave high velocities and less reaction than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

H. L. DUNCKLEE'S
PATENT
CAMPING and MINING

STOVE.

PATENTED JUNE 22, 1875.

Outside dimensions, packed, 22x13x20 inches.

Weighing only 35 pounds, very durable, will cook for ten persons, and is especially adapted for camping purposes. The ware consists of 8 qt. kettle, 6 qt. tea kettle, 2 qt. coffee pot, fry pan, round tin pan, 2 square pans, dipper, griddle, tent collar, 8 ft. funnel, and an oven that will roast 15 pounds beef.

The ware is so constructed that it nests and packs in the oven, and the oven and funnel pack inside the stove, as represented in cut 2, leaving room for packing half a dozen plates, knives, forks, spoons, and drinking cups. Price complete, $15.

BOW-FACING ROWING GEAR.

A REVOLUTION
IN
BOATING.

This rowing gear is an invention which allows the rower to face forward instead of backward, pulling in the same manner as with the ordinary oars. The oarsman faces the direction in which he goes, and rows faster and more easily than with any other oar. The stroke is longer than with ordinary oars. The oars can be closed no out of the way without detaching them from the gunwale. The boatman makes an more effort in steering than in directing his course while walking. These oars can be attached to and detached from the boat very quickly, and they can be closed up in a convenient form for carrying. Can be attached to any boat, and is especially adapted to hunting, fishing, and all kinds of pleasure boating. Address, during Centennial, "Hunter's Camp" of Forest and Stream, Centennial Branch P. O., Philadelphia.

Paper and Metallic Shells

FOR

Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressely for the purpose, we can now worrant our BROWN PAPER SHELLS eqool to any imported. They are sure fire, and will not burst in the gun.

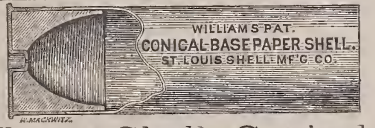
Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dec23 tf

Hart's Sportsman's Favorite Metallic Shells for Breech Loading Shot Guns.

These Shells are easily loaded, and the caps easily extracted from inside. Head solid, and much thicker an any shell now made, giving a solid seat for cone or anvil, which prevents it from driving through or springing away, thereby causing missfires. The cone is made of nickle and fastened solid in its place. It neither rusts or corrodes fost like moveable anvil made of steel. The nickle cone also prevents missfire when cap has been left on shell for a few days, which is liable to occur either in steel or iron. These shells are finely finished, and made any length ordered, from 2¼ to 3¼ inches.

Shells and Loaders, and descriptive Price Lists, can be obtained from all the leading sportsmen's houses throughout the country. GEO. E. HART & CO., 363 and 365 Market st., Newark, N. J.



From Captain Bogardus, Champion Wing Shot of America.

MESSRS. GEORGE E. HART & CO.,

Gentlemen—The fifty shells I received from you to-day suit me better than any I have ever used. They are stronger and better in every respect, and I shall use them in all my shooting hereafter. Yours truly.

A. H. BOGARDUS.

TESTIMONIALS.

From Hon. J. T. Headley, the Historian, Author of "Adirondack, or Life in the Woods," &c.

It is admirably written, and has just enough of humor, sentiment, and description of scenery mixed, to make it delightful. The illustrations are well chosen and very effective, while the instructions respecting routes, localities, distances, outfits, &c., embrace everything that can be desired. Taking it all in all, it is the most complete book that has been published on the Adirondacks, not excepting even my own—a compliment that I trust will be properly appreciated for its extraordinary disinterestedness.

From Albert B. Street, the Poet, and Author of "Woods and Waters," "The Indian Pass," &c.

I think it is the *best* work on the forest that has appeared—superior in word-painting to Murray's, and full of wood-pictures and vivid scenes of camp-life. We realize that we are in the forest, are living with you in the scenes described, and that the trees are waving and the waters flowing over and by us. This, I think, the true test of a good book, impressing its reality and distinctive life on the mind. As a "Guide Book," it is most creditable and valuable. Indeed, it is the *only* thing of the kind that has yet been published—the very thing that has been so long wanted and waited for. It must have cost you intense application and labor. You may well be content that you have produced a good book.

From Benson J. Lossing, the Historian.

I have read those portions descriptive of the places which came under my personal observation, with the deepest interest, and most cheerfully testify to the general accuracy of your pictures as I recall impressions made of them at the dates of my visits. I regard your "Descriptive Guide" and the "Appendix" as a most useful—nay, indispensable, manual for tourists to that wonderful Wilderness. A tour in that region is eminently a practical matter, and for that reason I regard your "Guide" as an important, useful, and timely publication.

THE AMERICAN NEWS COMPANY, AGENTS.

BUY IT Vanity Fair.

It is shaved from the best Natural Leaf, for Meerschaum and Cigarettes. Does not make the tongue sore. Sample on receipt of 20 cents. Highest award, Vienna, 1873. Send for circular. WM. S. KIMBALL & CO.,

PEERLESS TOBACCO WORKS, Rochester, N. Y.

From Seth Green, Supt. N. Y. State Fisheries.

I find Vanity Fair to be the best article of tobacco adapted to the wants of the sportsmen. Have used your tobaccos for many years, and know them all to be first-class.

For Sportsmen.

A trusty friend, in weariness or trouble; a solid resource in Winter and rough weather, is a sweet pipe with Vanity Fair. Best dealers have it.

From A. B. Lamberton, Rochester.

Having smoked your tobacco, Vanity Fair, by the camp fire and by the hearth, I believe it in point of fragrance and taste superior to all brands known to me. Being in search of a tobacco that would not fire the tongue and mouth, I was made acquainted with your Vanity Fair, and found it to be the, *ne plus ultra* of natural leaf.

For Cigarettes.

A cigarette is an interlude to the serious haint; a graceful make-believe for spare hours. For cigarettes Vanity Fair has no equal. Best dealers have it.

From Forest and Stream, N. Y.

We have received from Messrs. Kimball & Co., of Rochester, some choice specimens of their celebrated Vanity Fair tobacco in neat metal cases holding a pound each; and, after most thorough trial, do not hesitate to concede to it all the good qualities which its manufacturers claim for it. It is a most superior article, and a great comfort to discriminating smokers.

THE NEW

BOSTON

SHOOTING SUIT,

Manufactured only by

G. W. SIMMONS & SON,

Boston, Mass.

We offer this season an entirely new design of WATER-PROOF SHOOTING SUIT (made from extra quality duck), in the preparation of which we have been assisted by the advice and suggestions of our best resident sportsmen.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, the arm holes ventilated, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at $13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloons.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the *Golden Rule* (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skilfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, water-proof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Waist Measure, Height, Breast Measure, Length of Sleeve, Size of Head.

W. H. HOLABIRD

Would most respectfully announce to his patrons and friends that he is prepared to make

Shooting and Fishing Suits

at the above prices. The ten dollar suit is better made than any competitor can offer for the same money. My original design having been appropriated by other manufacturers, I have been compelled to make many changes in the arrangement of pockets, &c., for which I have to thank the fraternity at large for suggestions. I believe that I have the

BEST SHOOTING AND FISHING COATS IN THE WORLD,

and respectfully solicit your orders. I send my new illustrated Catalogue, 16 pages, free on application.

Dealers will find it to their advantage to handle my goods. They are better known and more highly esteemed than any other make.

CHAMPION GUNS OF ENGLAND.

PAPE'S

Unrivalled Sporting Guns.

Stand unequalled in every contest. Their performance at the London Trials of 1875 beats the records of any maker in the world.

1875. 12-Gauge, Choke Boring.

Maker of Gun.	Exhibitor.
1st—Greener	Greener.
2d—Pape	Davidson.
3d—Pape	Pape.

Out of a class of 68 guns, 3 out of the 6 best were made by Pape. The Greener gun was protested against on the spot for having its score false counted, the fact proven there, and afterwards confirmed by same gun being shot for two days per week for six weeks in succession, when its average score only took 24th place, its very best score being greatly below the scores of the best six guns.

1875. 12-Gauge, Old Sporting Bore.

Maker of Gun.	Exhibitor.
1st—Pape	Davidson.
2d—Pape	Davidson.

1875. Long Range, 60 yards, Choke Bores.

1st—Pape	Davidson

60 yards, Long Range, Sporting Boring.

1st—Pape	Davidson

Those champion Long Range guns, only 7 pound weight, with a charge of 3¼ dr. to 1¼ oz. shot, beat the best 8 bore Greener gun at 60 yards; weight, 15 lbs.; 6 drachms and 2¼ oz. shot.

1875. The Sportsman's Sob. Cup, valued at £45, was also awarded to W. R. Pape, for the original inventor of choke boring. Winner of the London Gun Trials of 1858, 1859, 1866. Address

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET, LIVERPOOL.

POPE'S

Rifle Air Pistol,

FOR TARGET PRACTICE.

Just the thing for sportsmen and military men. Shoots darts or slugs a distance of 50 feet. Perfectly accurate. By practicing with it one may become a dead shot. Each pistol is put up in a neat box, with 6 darts, 6 targets, 100 slugs, ramrod, claw, wrench, and skeleton gun stock. Price, $5; nickel plated, $6. Sent by mail on receipt of price and 35 cents postage.

One of the many testimonials from the Commander-in-Chief of the U. S. Army:—

"It is surely ingenious in mechanism, quite accurate in aim, and useful in preparing one for the more serious handling of the ordinary rifle.

W. T. SHERMAN, General."

POPE MANUFACTURING CO.,

BREECH LOADING GUNS

A SPECIALTY.

AGENTS

for the following celebrated makers:
W. & C. SCOTT & SONS (winners at the International Gun Trial of 1873); J. P. CLABROUGH & BRO.; P. WEBLEY & SONS, and WESTLEY RICHARDS.

THOMSON'S HUNTING SUITS AND OIL FINISHED GRAINED LEATHER SHOE PACKS.

DIXONS & HAWKSLEY'S SHOOTING TACKLE

STURTEVANT BRASS SHOT SHELLS,

BUSSEY'S PATENT GYRO PIGEON AND TRAP WITH CASE, AND 100 BIRDS.

Black's Patent Cartridge Vest.

This Vest affords the best arrangement yet invented for carrying cartridges. The weight is so evenly distributed that it is scarcely felt. Cartridges can be carried with the *heads down* in this vest, which is of great importance when brass shells are used, as when carrying them with the head up the weight of the shot often forces the wad forward, when bad shooting is the result. In ordering send measurement around the chest.

PRICE $7.50.

AGENTS FOR THE

Union Metallic Cartridge Company's Ammunition,

WARRANTED THE BEST IN THE MARKET. SEND FOR CIRCULAR.

WM. READ & SONS.,

13 Faneuil Hall Square,
BOSTON.

Sportsmen are cautioned against imitations of these Guns.

Winners of International Gun Trial.

Agents for Genuine

Shooting in Japan.

A DAY WITH THE SNIPE AT NAN-GA-MUNGI.

"Arma virumque cano."—*Virgil*

"WAKE up, you old porpoise, sleeping at this hour of the morning! Why, it was only last night you were willing to lay odds that you would be the first man up. O'Gaggen has just arrived, and I can see old John stalking down the bund with Snagsby and Fannie at his heels, and your boy has got your tea and toast ready, so—

"Rise up William Riley,"

buckle on your armor,

"And come along with me."

I was lying quietly in bed enjoying the cool atmosphere of a lovely morning in October—a morning that can only be appreciated by those who pass through the heat of a southwest monsoon in Japan—thinking whether I had everything arranged for the day's shooting, when my thoughts were abruptly broken by the advent of Gus, who, be it known, besides being one of the best shots in the East, is decidedly the best fellow.

It required but little urging to step off *pyjammas*, take a jump into the bath-tub, and doff a light shooting suit. This finished, I strolled into the dining room where Gus and O'Gaggen had commenced work upon the regular Eastern morning repast of tea, toast and eggs.

John was standing on the sides of his feet by the bay window drumming a tune on the panes, his hat pulled down partly shading his eyes, and a cheroot in his mouth.

"Good morning, John. Don't you eat anything before shooting? Better have an egg, or something of the sort."

"Eat ——! no. The last time we left here to shoot pheasants at Ma-ri-ko I ate one boiled egg, and the infernal thing sat like a loaded cat-ridge in my stomach all day, and besides mighty near killing me it caused me to miss every pheasant that came within shot. Eat! Thunder, its a wonder to me that you three gormandizers, after stuffing yourselves with a heavy dinner only at eight o'clock last night, can find room to stow away such trash as tea, toast and eggs; here, boy, give me some *teppo midzer* (soda water) and that bottle that has three stars on the cork. *That's* the kind of eating I commence the day with. It don't load you down like a charge of buckshot in your "innards" like those —— eggs."

"You are foolish, John, not to eat something. We get nothing more until noon, you know, and walking through rice fields with a blazing sun overhead is no joke," said Gus.

"I have lived many years in China and Japan, and no one can tell me that eggs and tea is proper food for a human being to start out in the morning with. Anyway, it won't suit me, and that heathen (pointing to the servant) carries my grub, and its in the chronometer case." Well, every one can suit himself, but my advice is, never to start out on an empty stomach to travel over rice fields that continually emit miasmatic vapors, and to prove this I am stowing away the fourth poached egg," exclaimed O'Gaggen.

"Yes, in your country," replied John, "they are glad to eat a badly boiled potato and call it a tip-top dinner, but where I was raised, in America, a few miles from Portland, they dig up the sun with a spade and bake their pork and beans with it, finishing off with Cape Cod woodcock."

"What do you call that?" asked the President.

"Well, its salt fish, two boiled potatoes, a beet, and a quart of boiling fat. When I was shipwrecked off Cape Cod, thirty years ago, it was the first and last dish they fed us on during a week's stay, and the fellow who could drink the most grease was considered the healthiest man."

"Indeed!" said the Irishman. "What a queer country you have lived in."

"Yes, but that is not the greatest part, either, they use this grease for various purposes. It never costs them a cent for oiled clothes. When they go a-fishing they only put on an old pair of trowsers, and oil the rest of their bodies, which makes them waterproof, and as for hair oil, why, bless you, a Yankee peddler could not sell a bottle in a year; they use nothing but pure pork fat on their hair, which turns it in time to first-rate bristles, so when a man gets short of cash he has only to have his hair cut and carry it to the first shoemaker in the village to get ready money. They call this the *basis* of political economy, and it was where John Mill, one of your countrymen, first got his ideas of political economy from," replied John.

"My gracious! what a country to live in," responded the Irishman, as the fourth egg disappeared.

"Well, President, what is the programme for to-day? The sun is just rising, and we had better be up and doing," interrogated John.

"You, Gus, O'Gaggen, and myself will go over in my shooting boat with the dogs, while the servants can he driven up in my wagonette with the luncheon to 'Black Eyed Susan's' on the Tocaido, where they can hire coolies and meet us at the fourth dyke at noon with the tiffin. In the evening we will change places and drive home, while they can go with the dogs and the boat."

"All right; here boy—in Japanese—put this change of clothing in the boat with Snagsby and Fannie. Shove my gun and cat-ridges in with them, and don't forget my "chronometer case" or you will spend the night in the Tobi prison."

Sally, Diver and Becky having been safely stowed on board the boat with the other dogs we all jumped aboard, while the boatman shoved off, and hoisting our heavy Japanese sail we were soon spinning through the shipping with the light morning air, with bow pointed for Manga-mungi, six miles ahead.

It was a lovely morning, delightfully cool, and we all tacitly enjoyed the sail while smoking our cheroots.

"O'Gaggen," said John, "it has always been my misfortune while shooting with you to have that Sally of yours step ahead of me and flush every snipe in the field. Now what use is a dog to any one who has to call him into heel every five minutes. It only spoils the fun, and I would advise you to shoot the bitch at once."

"That bitch will be the finest pheasant dog in Yokohama next year, and as she is out of your Fannie by Gus' Diver I consider her pretty good stock."

"I intended to drown one pup of that litter, but I said to myself, 'there's O'Gaggen, who don't know the difference between a poor pup and a Japanese Custom House officer, so I will give her to him. That's the way you got Sally. Now take my advice and heave her overboard at once."

"Come look alive, all of you," cried Gus, as the boat's keel grated on the sandy beach at Man-ga-mungi.

"Why, there's the President's wagonette just arrived at the Tea House abreast of us. I can see the *bettoes* unharnessing the horses. The servants will be in time to meet us at the fourth dyke. Now, then, spread out in the rice field. Keep your dogs well into heel and walk slowly, the slower the better. There is never anything gained by walking snipe in a hurry, as in so doing, in three cases out of five, you are apt to pass the birds that may be lying close in the rice. Are you ready?"

"Hold on," replied John. "Where's my 'chronometer case?' Here boy, *saki*. Where in thunder did that rascal go to? Here O'Gaggen, you always carry a private stock of Dunville & Co., let me wet my lips before shooting. That cheroot was pretty strong; came near getting the best of me. Now I am ready," rejoined John, invigorated by a pull at O'Gaggen's medicine bottle. "Keep your eyes peeled. Thunder! the birds are rising wild. Well done, Gus. Keep in line President; no hurry."

The snipe did rise wild as John had said, but one by one they dropped, the dogs retrieving them.

Gradually we became separated while pushing up the patch, Gus and O'Gaggen taking the field parallel, leaving John and the President to work the first stretch.

Suddenly we heard a loud noise, and John broke in with: "I'll bet my hat that Gus has shot 'Chop Dollar' again. He will fire at a snipe even if his best friend is in point blank range," and his words were verified, for on arriving at the spot Gus was settling matters to the satisfaction of the wounded coolie by giving him a few *tempos* for having shot him by mistake; his bird getting up behind and in range of master "Chop Dollar," who, from Gus' continual target practice at his face, had earned the *soubriquet*.

After working up the third dyke, and in passing a small bend, O'Gaggen was seen signalling the party, and on approaching him we were astonished to hear that he had marked down a couple of woodcock in a small clump of bamboos and hazel which surrounded a few old graves. The brushwood being almost impenetrable the spaniels were sent in to do duty, while we stationed ourselves in likely positions. In a short time the barking of one of the spaniels announced that the birds were flushed, and almost simultaneously the report of O'Gaggen's gun was heard, followed by John's loud, convulsive laugh interspersed with "a crow, by thunder!" called us immediately to the scene of amusement, and true enough the Irishman had bagged a crow which was flushed by the dogs, and shot before it was ten feet away from the cover by the quick-sighted O'Gaggen, who expected to see a couple of woodcock. Notwithstanding this unfortunate mistake O'Gaggen was convinced that the cover held the woodcock and proposed to try and flush the birds himself. Hardly had John's laughter subsided, and which was only quieted by vigorous pulls at his "chronometer case," before the birds rose sharp on the wing from the very edge of the bamboos and flew almost straight at the thirsty man, who was now too much occupied to be able to grasp his gun, and were both brought to bag, one falling to Gus, and the other to O'Gaggen. The laugh now turned upon John, who, with ill-concealed mortification, swore that it was no fault of his that birds will fly at the wrong moment.

The end of the fourth dyke was just visible, and with it our servants who had preceded us. Luncheon had been spread upon the ground under the shade of a massive tree, and seating ourselves we were soon busily discussing the merits of a cold game tiffin and Hock and seltzer. While doing justice to the repast it struck O'Gaggen to inquire of John how many birds he had brought to bag, and was rather surprised to hear that our worthy friend had not a feather to show for his morning's work. "But," said he, "it is not the fault of my shooting, but that infernal Dutch powder which I bought of old H., and then again it happens sometimes that,

'So swift a bird is apt to make
Old shots with indecision shake,
Such are indeed when they kill
Much more to fortune than to skill.'

"Those are splendid birds," remarked the President, weighing one of the largest. "This last one I knocked over weighs just six and one-half ounces. I have seldom seen solitary snipe, even in this country, as large as this fellow."

"When I was in Hakodadi, last year," replied Gus, "shooting on the long marshes, which extend from the fort seaward, I bagged twenty couples of snipe, not these English snipe, but real solitary snipe—the *Scolopax major* of Linnæus—in just one hour, and every bird was as heavy as that one you have just weighed. They were not, however, what I call 'bang-up' shooting, as they rose heavily when flushed from actual fatness, and made it easy work for me to knock them over, whereas the snipe we have been shooting this morning are with few exceptions English snipe, and are a much lighter and wilder bird, which makes shooting, in my opinion, more exciting; but then so far as flavor goes of course there is no comparison, as the solitary snipe has more of that delicate taste that we so much admire in the woodcock than any bird I know of; in fact, the Japanese themselves consider the snipe as belonging to the woodcock family, and the name *yama-shigi* means nothing more than hill snipe, which I think a very appropriate appellation when you take into consideration the similar habits of these birds."

Luncheon dispatched we enjoyed a quiet pipe, and then counted our morning's work, which amounted to fifty-two.

couples of snipe, a brace of woodcocks, and O'Gaggen's crow.

"Now," said John, "as the day advances I feel more limber, and if you can let me have a few of your cat-ridges, President, I will try my hand at the *shigis* homeward, but let us take those rice fields in on our right, we may trouble other game by the side of that small pond. I have picked blue-winged teal out of it at times, and it may be possible that we shall find some there this afternoon."

Then swinging off to the rice field on the right we again spread out, when John, to the astonishment of all at the very first shot, brought down three snipe out of a wisp of six, and shortly afterward Gus distinguished himself by a long shot at a pheasant which was flushed from the rice.*

As the sun was setting we reached the boat, and placing the dogs and servants on board, started them home while the four of us were ferried across the river to the Tea House, and there, after a change of clothes, &c., and a few cups of pure Japanese *icha* we jumped into the President's wagonette and drove rapidly homeward in the cool of the evening, tired but satisfied with the day's shooting.

When fairly within the gates of Yokohama, and while driving over the *yo-shi-do-bashi*, Gus turning to John said, "Of course you will dine with us to-night at *ro-ku-bun*, and as for change of clothes and a bath we also supply these, which will not necessitate your going home?"

"I have had feed enough to-day, but I don't mind looking at you three gormandizers at work, and about the bath, if you will haul up at the club, President, I will wash myself inside first, and afterwards think of hide scraping at your establishment," replied our worthy colleague.

SAMOURAI.

*This is rather unusual, but an actual fact. We were at least six miles from the nearest hills where these birds could possibly find their regular food. It sometimes happens that in straying away from the hilly districts they become bewildered and secret themselves in the rice fields.

NOTES OF THE WHEELER EXPEDITION.

A DAY IN THE CHAPARRAL.

"In the wild and purple mountains he longed, he longed to be."

IN the coast ranges we wander. In the morning we ride along the line of surf and seaweed, and are met with the breakers and the mist. At noon we are two thousand feet above, upon the cliffs which are the abrupt junction of land and sea. Around us is the sunlight, then, below us, over the water, a great volume of cloud settles in convoluted banks which muffle the roar of the ocean. As the day advances the mass becomes more orderly and stratified until, at evening, half cumulus and half stratus, it spreads broad and billowy like a second ocean over the first. Its horizon is as even and level as the horizon of the water itself. Above its white and fluffy substance the black heads of the islands peer, like the crests of serpents above the sea-foam. Underneath this envelope sail the ships, whose passengers are cold and damp and uncomfortable, and murmur at Heaven's unkindness in thus hiding her face from them, when it is not Heaven's doings at all, but only a film of earth's obscurity, which we, from our heights, look down upon and enjoy.

Before us is the trail which the deer and the Indians pioneered for us centuries ago. By this path the wild doe goes down to drink when the moon is high. On either side bristles the dense abattis of *chaparral*, through which no man is lank enough to thread his way, no animal is strong enough to breast a passage. Its boughs are not lissome like the hazel and birch, but dry and sapless, are like iron in their inflexibility. It is a tangled and matted thicket of grease-wood and evergreen, wild rose and sage, with flowers of all colors and kinds interwoven. Here and there the white and flaky raceme of the regal bayonet-plant overtowers all. Nature recognizes the fact that beauty needs defence, and hence the thorns of the rose and the bayonet-flower's spines, which, sharp as needles, radiate from the root of the plant and are a guard to its beauty. In like manner a queen is surrounded by the bayonets of her trusty soldiers. The spears of the bayonet-plant are as keen as the spears of the Spartans, and a field of this growth is as pathless as a cactus-bed. Along the trail some kind pilgrim who has gone before us has clipped the thorns away. Probably he rode a mustang; the mustangs are intelligent creatures and early learn by sore experience to avoid this species of shrubbery, and, ungenerous that they are, they do not hesitate to fly the track and harry their riders through a grease-wood copse in order to save their own tender skins from contact with a tiny bayonet-plant. Be he never so brave, there are two things from which the mustang will shy—they are the bayonet-plant and the rattlesnake.

In these coverts the rattlesnake is at home, and, on account of his deadly presence, he who chambers up these mountains, clutching with his fingers close to the ground, literally carries his life in his hands. In precaution it is well to wear gauntlet gloves and boots with high leggins to shield the vulnerable parts of the person. Yet it was but the other day that we saw a Mexican who was shod with only a sole of buck skin, which was tied sandal-wise upon his foot, and with this excuse for a shoe he walked fearlessly into the lairs where they were thickest. Surely there is some fraternity between wild animal and wild man, and some reciprocity of harmlessness to which they have agreed.

A lariat of braided horse-hair is a prickly harrier over which, according to popular belief, they cannot pull their tender skins, and in a dry and rocky country the practiced mountaineer is seen to spread his bed of blankets within this magic circle. Ropes of horse-hair are plenty and can be procured in any store, for the making of them is a common accomplishment known to the ranchman, who with this art whiles away the rainy day, and to the shepherd, who does not fool his time away in piping on an oaten reed like some sentimental Colin Clout, but improves it by weaving lariats the while his sheep are lying down. Horse-hair is a favorite material with the Mexican saddlers also, and deftly they braid it into bridles, halters and girths. With other commodities it has its market value, and to procure it horses are cropped as sheep are shorn. Often have we seen great herds of horses with tails closely docked in order that the brushes of hair might be woven into rope-work for the fanciful adornment and equipment of other horses.

As for remedies against the snake-bite, if a finger should be struck, cut it off and throw it away. If an arm is bitten and there are a hatchet and hand-saw convenient, a hurried amputation may save one's life. But if wounded in a more vital part, then God help you, you are *in extremis;* drink whiskey then immoderately, intemperately, and like a toper. *Similia similibus curantur*—the one poison may neutralize the other. Not only as a cure, but as a precaution, is the use of whiskey recommended, and Smith, the packer, is never without a small flask of it. As he holds it up between his eye and the sun, and dwells upon it in anticipation, he remarks that it is well to have a drop along in case of snakes, and again, as he draws a long breath after a long imbibition, he says that it is well to keep a little in the system "so as to be fortified like."

Of all the dangerous creatures that infest the *chaparral* none are more to be shunned than these homeopathic dispensers of death. The minutest drop of poison from their fangs will curdle a man's blood in his veins in a very few hours and he dies most horribly. It is safe to say that the old enmity between the seed of woman and the serpent will never end, and the new settler hunts the rattlesnake with a hatred which is as intense as his love for his children. But still, in spite of its deadly powers, this is considered but small game, like the sneak-thief, the bumblebee, and the mosquito, in whose pursuit no glory can be gained. To fight the bandit and the bear, and to die in their grasp is heroic sport, but to be killed by the rattlesnake or tarantula is an unqualified misfortune. That is a very peculiar and unpleasant cold tremor which shakes a man's heart when he finds himself, all unannounced, hand to fang with one of these symbols of Satan, with malice glittering in its eye and venom shining from every writhe of its coil. No man, however brave, can feel the fawning of one of these murderous reptiles about his ankles without a sudden departure from dignity. He invariably howls in a suppressed voice, leaps whichever way his muscles will first lift him, and then laughs nervously; and, if he be at all profane, he swears a little, addressing opprobrious epithets to the black and yellow creature in question. Sometimes, if he is at all nervous and very close, the laugh is swallowed up in the howl. Having recovered from discomfiture he takes his revenge, building a rock monument upon the doomed reptile, and with every bowlder consigning it to that lower sphere which is the home of its prototype. As I say, he stones it to death, for it is vain, and a waste of opportunity and ammunition to shoot at a snake when its slim body lies at full length, especially when a person is agitated and not in tone for a beautiful precision of aim. A pistol is a very nice toy for amusement or practice, but for killing a snake give me a fragment of granite, or a "nigger-head" from the bed of the stream, and let it be a handfull in size and about three pounds in weight. Finally, when his victim has ceased to wriggle, the hunter carefully detaches its cluster of rattles, a node for every year of its life, which he will carry with him in his vest-pocket and exhibit when trophies are counted.

Now, having finished this batch of snake, let us continue our ride through the *chaparral*. There is a health and vigor about this kind of life which is regeneration itself. A thrill of excitement comes over him who nears the crest of the mountain, for he has anticipations of the new views, new prospects, new country to be seen on the other side. Every ledge is a field for discovery, every cañon is a lurking-place for adventure. The rasping of every footstep on the brittle earth of the hillside may reveal a fossil which is a reminder of extinct life, a potsherd which was baked by an ancient people, or a quartz which is the blossom and outcrop of rich mines underneath. The explorer is an amateur prospector. The prospector's zeal is a mercenary one; the explorer finds mines as an astronomer finds planets, or as a philosopher finds truths, just for love.

There is a peaceful pleasure in sitting and smoking at the front door of your tent, which opens on a new picture every evening. And in the beautiful morning, when the sleeper awakes with his beard all silken and soft with the dew, he feels the strength of a giant in his frame. There is much hidden meaning in the old fable of Antæus, for Earth is our mother, as she was his, and never did one of her children sleep on her warm bosom in summer without feeling the principle of life grow strong within him. All night long the breath of the wild rose is heavy in the atmosphere, and in the morning, at breakfast, a cluster of them drooping over the edge of their humble vase, an empty yeast-powder can, lend a pleasant air to the cloth upon which the bacon and bread are piled. All is wild and unknown here, and restraint and conventionality are things but dimly remembered. At night we camp under the trees, and by day we ride over the hills, and neither by night nor day are our minds troubled with thoughts of barber, tailor, or housewife, for we are all these, and even more. In a little world of our own, with rations and equipments, for many weeks, there is no need of word of intercourse with human being in that time. We see no daily papers, and read no Centennial reports and poetry. The fluctuations of the money market do not interest us, for we have no money, neither any need of it. Though deprived of many comforts, yet we are spared many inflictions, and, taken all in all, the balance is about even.

Thus following the sinuous outline of the coast we find ourselves upon a promontory which separates two jealous and very belligerent places. They are the bays of Wilmington and Santa Monica, each of which is a harbor with its advantages and disadvantages, and each of which aspires to be the future sea-port of Southern California. Which of these is the better one let us not say until we have fully concluded in which one's real estate and docks to invest our extra capital. So we view the situation impartially, and we see, what we have seen before, that there is no other rivalry so bitter, and no other jealousy so great as that between two neighboring towns which are now neck by neck in the race for prosperity, but which contest must end by one becoming a suburb of the other. For years it seems as if the very next word of quarrel would lead to blows and civil war between the parties to the contention, but from them we learn that the way of words is long that leads to blood-shed, especially when the disputants are a brace of newspaper men. How valiant these head lights of civilization do become, and what watch dogs are they over the interests of their patrons, and how learned in the use of the slang dictionary! And yet all the editors that I have known were peaceful men, and if the time-honored western challenge "Drink or fight!" were offered them they would always be sure to weaken on the first half of the alternative.

At present Santa Monica and Wilmington are both suburbs and sea-ports of Los Angeles, where their patrons live and where the heat of the struggle is. Long editorials, bulletins and maps are printed in defence of the harbors in question, and the public mind is much concerned upon this topic of the position of that great haven which must lie between San Francisco and San Diego, and be the outlet of this fertile and isolated region, which is bounded on the north by mountains which are well nigh proof against railways. Here, also, roads from the east must terminate in time, and their passengers and freight take vessel for the north. So this position for the harbor of Los Angeles rises above the pettiness of private interest and becomes of wider consequence. If the question is to be settled, it were well that it were done quickly, for the Government is building a breakwater at Wilmington, and private enterprise is pushing a pier out into the Bay of Santa Monica and laying out the streets of the city that is to be, and one of these projects is lost work. Let the break-water be done and the pier be finished, however, and then time and the sea-captains will soon tell which is the best, and that will prosper. Mortal men and engineers may be mistaken in their plans, but there is no such thing as fooling Time and the sea-captains. FRANK CARPENTER.

HUNTING DEER AND FINDING SNAKES.

IN Vol. IV, No. 10, of your delightful journal, the valorous deeds of six mighty hunters of Harrisburg, stand recorded, a sad illustration of the vast difference between theory and practice. For some time after this disastrous expedition, the subject of deer hunting, like other painful subjects, was studiously avoided until hope began to revive in the breasts of the illustrious Six. During the winter and following summer the pleasures of anticipation gave place to chagrin, and plans for another war of extermination were completed. But when the long looked-for 1st of September had arrived, circumstances compelled Messrs. Wells, Hackett, and the writer, to remain at home; but Allen, McKee, Leonard, (the blacksmith,) and Mr. Rudisill, (who, from hearing numerous glowing accounts of the pleasures of the chase, had determined to distinguish himself) were speeding toward the beautiful valley of Licking Creek. They reached the famous valley, and after repairing the cabin, they turned their attention to the discussion of plans for the next day's "slaughter," and with the full determination to redeem lost reputation, a programme was arranged.

Next morning they were up before the dawn, and after a good breakfast, they started from the cabin. Everything seemed to justify their expectations of success. The weather was delightful, and over the dreamy woods, almost perfect silence seemed to prevail; the leaves were moist from a recent rain, and not a breath of air stirred to carry the warning scent to the ever-watchful deer. But they had not proceeded far before they made a discovery sufficient to dampen the ardor of the most sanguine hunter. For weeks previous to this time, the mountains, for many miles around, had been on fire, and Licking Creek valley had become a very "City of Refuge" for legions of rattle snakes that had, as was supposed by many, been driven there by the fires. Scarcely a hundred yards could be traversed without hearing the warning rattle of this deadly reptile. To watch for snakes and hunt deer properly at the same time, was hardly possible. The day passed without getting the sight of a deer; but more than one huge specimen of *Crotalus durissus* fell a victim to the aim of the hunters. When they met that evening the situation was discussed, and admitted to be grave, but they determined to stand their ground, and hold their position at all hazards; and the next morning found them again on the war-path. Several deer were seen, and also unmistakable evidences of the presence of bruin; and once during the day Allen and the blacksmith came so close to a bear as to distinctly hear his hasty retreat. After a short consultation it was decided that the blacksmith should follow in the direction of bruin's flight; while Allen was to make a detour of a mile or more in order, if possible, to "head him off." They accordingly separated, and were soon out of sight and hearing of each other; the blacksmith cautiously descending the end of the mountain, and Allen making fast time in another direction. Allen reached the desired point, and taking a commanding position, awaited events. An hour passed, and just as his patience was begining to give out, he heard something cautiously approaching the spot where he stood, but to his great disappointment it proved to be the blacksmith instead of bruin. The bear had evidently given them the slip, and for this time was safe. As the day was well nigh spent, they concluded to hunt back toward the cabin, for which point the blacksmith "struck a bee line." But Allen, not satisfied with the day's work, stubbornly determined to hunt as long as there was light enough to draw a bead; and while cautiously stealing along, listening and watching, he heard a slight noise in advance of him. Standing perfectly still, he soon beheld the cause of the disturbance. Running toward him, at a distance of not more than twenty yards, was an animal whose kind he had never before seen in daylight, in the woods, and, coupled with its audacity, a strange, peculiar growl, which, as he was afterwards ashamed to confess, for a moment somewhat unnerved him. It quickly retreated a few paces, when up jumped four others, all arranging themselves boldly and beautifully upon a flat rock, and all uniting with their companion in the dismal-like growl. Then came five ringing shots in quick succession, and five representatives of the old-time Whig party (veritable ring-tailed 'coons), has passed with their constituents, into history.

As it was now getting dusk, Allen quickly gathered up his game, which was load enough for one man to carry, and made the best possible time for the camp, which he reached before dark. After a hearty supper, of which stewed 'coon was the principal dish, it was decided that the want of success that day was mainly attributable to the failure of some of the party to carry out their part of the programme as arranged by Allen the night previous, and they determined to hunt the next day in such a manner, that nothing but an ignominious nocturnal flight of all the deer in the vicinity would save them. A plan was accordingly arranged, and the hunters once more laid down to sleep.

The next morning found them again on the trail. The blacksmith and Rudisill took positions on a well-known "crossing" near the end of the mountain, while Allen and McKee were to take opposite sides of the mountain, and

hunt in their direction. This was Allen's plan, the wisdom of which was soon made manifest, for before noon the silence was broken by two tremendous reports from Leonard's gun, and before its storm of buck-shot and wire, a noble five-pronged buck had gone down. After congratulations and a "smile" over their victory, the now united party dressed and carried the deer to camp.

The weather was exceedingly hot, and in order to get their venison home in good condition, they determined to make a forced march toward civilization. Accordingly after supper, by which time on'y the tops of the highest hills reflected the rays of the setting sun, they packed up their "traps," and started. With a deer weighing 135 pounds, the flesh of five 'coons, guns, and ponderous knapsacks, their progress was necessarily slow; and before they had traveled one mile, it was dark. Allen, appreciating the magnitude of the task before them, halted at the creek, and added about a gallon of water to his already enormous load. The rest of the party pushed forward to the foot of the first mountain, and there halted until the old ranger came up. One could not help but admire how philosophically Allen submitted to the jeers of some of the younger members of the party. But the emergency which that water was intended to face was not far off, and Allen could afford to await the vindication of his conduct. Up the mountain, over rocks, through the blackness of darkness they crawled along, sometimes standing, sometimes falling, and now and then lying down to rest a moment. In this manner they had ascended about one-fourth of the distance, when they discovered that it would be impossible for them to carry the deer, knapsacks, and guns, up the mountain at one time. They determined to leave the deer and carry the remainder of the burden to the top of the mountain, build a fire and then return for their venison. Allen took the advance, and on hands and feet began to crawl up the steep rocky side of the mountain. He was soon considerably in advance of the others of the party. But in an instant, and by one of the most extraordinary backward leaps on record, he landed in the very midst of his astonished companions. One word, "rattlesnakes," explained the whole matter, and they all soon fully realized the horror of the situation, for from every side came the blood-curdling rattle of these deadly reptiles, into whose very den they had in the darkness blundered, and they dared not move. Some proposed climbing trees but none were within immediate reach. The great *desideratum* was "light." Amidst inconceivable peril, Leonard, who remained hopeful, succeeded in starting a fire. He would insist that a rattle-snake would never bite any man who had a clear conscience. So it seemed. McKee made free use of fire brands, and finally succeeded in quieting the furious reptiles. Here Allen's genius was brought into play; taking his frying pan out of his knapsack, he built a fire upon it, again took the lead, and started for the top of the mountain, followed by the rest of the party. They reached the summit shortly after midnight, where all, overcome with fatigue, hunger, and thirst, lay down upon the rocks and slept until morning. By this time McKee had entirely subsided; he was so completely collapsed that he declared water must be brought him, or he would have to be hauled out of the mountains. None of the party were much better. Allen finally started off to a spring, a mile and a half distant, and in an hour or so returned with the refreshing beverage, while Leonard set out upon an expedition for a horse and wagon, and by noon they had reached the railroad station, and in due time arrived at Harrisburg, greatly fatigued, but all well able to enjoy a venison steak on Sunday. For Forest and Stream.

FLY-FISHING ON THE HOMASASSA.

A CERTAIN evening last February found us safely landed at the comfortable house of Alfred P. Jones, on the Homasassa River, Florida, where we met with the kindest possible reception. Here we found a goodly number of gentlemen from the north, heroes of the rod and gun, with a fair sprinkling of ladies, who had braved the sail hither across the open Gulf of Mexico.

The Homasassa River winds through a tortuous channel, and it is ten miles from its spring head to its mouth. Opposite Mr. Jones' it widens into a bay about one-fourth of a mile in width, the banks sloping gradually towards the centre of the river. At high water (for there is a considerable rise and fall of the tide) the various kinds of fish which inhabit these waters run up the river and hide in the grasses on the edge of the banks. Before leaving home we inquired whether we had better take our fly rod along, and were told that it would be useless in Florida. The same thing was afterwards told us at Jacksonville. Nevertheless we brought it. After several days of most excellent sport with the heavy rod and reel, catching sheepshead in great numbers, we made up our minds to try the fly rod. We had noted many likely spots along the river, and particularly the grassy banks opposite the house. We had also noticed that black bass (southern "trout"), sea trout, skip jacks, etc., were to be seen jumping at these places at certain times in the morning and evening, as if feeding, and we immediately resolved that these would be the most likely places to be rewarded with a rise to our flies.

The next evening the fly rod was brought out and limbered up, much to the edification of the incredulous ones. We selected one fly only for our cast—a large one, with red ibis wings, crimson mollan body, and golden pheasant tail—which was tied on a No. 6 hook. With one similar we had taken many a bass at the north.

"Now, Doctor, suppose you exercise your muscles a little, and paddle us out into the deep water so that the flies will laud just at the edge of that bank." 'Twas done; Five or six skeptical disciples of Walton stood on the piers of the boat-house awaiting the result of the experiment with an incredulous expression on their faces.

"That will do, Doctor; keep her well off the shore—just about so far—paddle slowly so as to go over every inch of the ground thoroughly." Away goes the fly. A first, second, and third casts are made with no results; a fourth and the water fairly boils, but the fish did not take the hook. "Whew! Doctor, did you see that?" "Yes," he says, "give it to him again—quick!" Away goes the fly again. This time the fish breaks the water magnificently, and is fairly hooked. Then follows a tough fight, but there is finally brought to the net a magnificent bass of two pounds weight. Soon another, and then another are caught, weighing as high as five or six pounds each, and the astonished spectators on the wharf say they never saw better sport in Florida.

This was only the beginning of our fly-fishing. We whipped almost all the best-appearing places in the river, but found none where the fish rose better than just opposite the house. We took frequently a sea trout or weak fish of three and a half to four pounds weight on the fly, and when we happened to get hold of a skip jack, there was music on the reel equal to a brass band. One day, when coming down the river, we cast the flies nearly opposite the pier at the old plantation. A school of about a dozen large cavalli rose to the fly all at once, fairly churning the water into a foam. They would not take the fly in their mouths, but simply rushed at it in a most frantic manner, and when the fly was drawn toward the boat they very nearly jumped into it. This continued for fully fifteen minutes, and was a sight never to be forgotten. Had one of them been hooked, rod or line would have broken, as they were of fully twelve to fourteen pounds weight, very powerful, and very tenacious of life, though not particularly edible. We always found it convenient to have a trolling line in the boat. The largest fish, such as redfish, groupers, tarpun, and cavalli are generally taken only by this means, and the spoons and spinners which are usually sold in the stores proved there utterly worthless, owing to their having such slight and frail hooks. Among all the fishermen at Homasassa, not one had a spoon which was not thus utterly ruined. Before leaving home, acting upon the timely advice of "Al Fresco," we took several of the "James" spinners, and had new steel wires put through them, with a round spring loop at the bottom or tail end. We then procured some very stout Virginia cod hooks, about No. 1s, with eyes in the shank, and had the eyes of two filed off, and firmly soldered them to one with an eye on it. We made several of these gangs of hooks of different sizes, any one of which could be easily attached to our spoons. By this plan if one hook became broken we could easily slip on another set without the loss of the use of the spinner. By this precaution we did not lose a fish from the breakage of hooks. Since our return we have sent complete drawings of the size of spoons and hooks and our plan of attaching them, to Wm. H. James, at No. 338 Kent avenue, Brooklyn, and he has now produced from them two sizes of spinners with very stout hooks, which hereafter will prove a boon to all fishermen who visit Florida. Spoons made with these improvements would prove a capital bait for bluefish on the south side of Long Island or off Barnegat. We found spinners without feathers much more taking than with them, especially in this case, a spinner resembling a fish when turning in the water.

About a mile below Mr. Jones' house the river runs between projecting ledges of rocks on either side. Here the tide runs swiftly, and the eddies near these rocks are the favorite feeding grounds for large fish. We trolled very successfully at this place with the spoons above mentioned. A lady in our boat captured a red-fish thirty-seven inches long which, two hours after its capture, weighed sixteen pounds. These are the fellows that test the metal of your hooks. Above the house we found the trolling for bass and sea trout at times excellent, frequently catching four or five in three or four hundred yards. Near the head of the river the water is very shallow for some distance—not over four feet in depth, but as clear as crystal. The bottom is covered with very white sand, with occasional dark places where grass grows. By standing at the bow of the boat and rowing slowly along, quantities—literally quantities—of fishes can be seen swimming ahead of the boat or darting swiftly by it. But, strangely, the trolling in this place was most excellent. In passing over an eighth of a mile we took ten black bass, the smallest two pounds and the largest nine pounds fairly weighed.

We cannot close without giving our testimony as to the comfort we had in the use of one of Holabird's improved fishing coats. It was light, very pleasant to wear, rowing, and contained pockets for all our little traps. We used it also with equal comfort as a gunning coat.

HUNTINGTON.

Fish Culture.

HOW BLACK BASS SPAWN.

FOR several days past we have had the rare good fortune to watch the operations of a dozen bass on their spawning bed, and an interesting sight it is. About the last of May, E. S. Pease, the artist, caught some fine bass and placed them in a large spring, which is a hexagonal inclosure of six feet diameter, walled up to three feet above the water line. Here they seemed to thrive, and a few days ago we put in some shovelfuls of gravel and coarse pebbles, and were not surprised to find they had soon made their bed on it, and were ready to spawn. Creeping cautiously to the edge and peering over, we soon had the satisfaction of seeing just how they did it. Most of the fish were keeping shady under a plank float left for the purpose; but presently one of them sculled leisurely out and settled over the bed with a "short, uneasy motion," which soon changed to a brisk jerking of her side against the bottom, her bright belly gleaming like silver, as she coursed round and round, *stirring* (Seth Green's word) her spawn over the same spot at every turn. We could not see that any of them worked in pairs, and concluded that the milt and spawn both sunk at once to the bottom and fastened themselves to the gravel, and as there was no current to wash them away (as in brook trout spawn beds), pairing was not necessary to the impregnation of the ova. For about a week this spawning has been going on, retarded, perhaps, by the cold spring water; but the interesting young mothers seem to be "doing as well as could be expected."—GYP SEE.

P. S.—When the bass were put in the spring it was infested with a vegetable growth, usually called "frog-spittle," which has now quite disappeared; and the question comes up as to how far fish (of this genus) are vegetarians. That they will bite at minnows, even on their spawn beds, we daily prove by dropping a few small fry in among them, which disappears in an incredibly short space of time.

RELATIVE VALUE OF PICKEREL AND MASCALONGE.—There is as great a difference between the two varieties of fish named as there is between a bullhead and a Mississippi catfish, the pickerel never attaining a heavy weight, while the mascalonge is often enormous. We saw one last year, taken from the St. Lawrence, that weighed forty four pounds. The following on the relative value of the mascalonge and the pickerel for the purposes of propagation was read before the Massachusetts Angler's Association, at their last regular meeting, and is from the pen of Dr. E. Sterling, of Cleveland, Ohio, being written for the Association. With it was received a photograph of a forty eight pound mascalonge, which can be seen at the rooms of the Association, 608 Washington street, Boston:—

"The inclosed photograph taken from the colored plaster of a mascalonge (*Esox nobilior*), weighing forty-eight pounds, gives a very correct idea of the form of the well grown female when ripe with spawn. Forty pounds is about the average weight of the full-grown fish in the western lakes, though it once often attained a much greater size. The largest ever met with in this vicinity I speared in 1844. That turned the scale at eighty pounds. The same season a friend of mine on the Maumee river took from their spawning beds, in a forenoon, fifteen that weighed together 600 pounds. He remarked to me afterward, 'As I speared these fish I hung them up by the gills to the trees along the bank, and at noon when I had tired of the sport, I could have scraped up from the ground a half bushel of eggs that had passed from them.' This destructive mode of fishing, be it remembered, was practiced at a time when the mere mention of the protection of fish and game by law, or any other means, would have been looked upon as more than a mere piece of folly.

A neighbor of ours had a walled-in pond, fed by springs, 50x15 feet divided into two compartments. Into one he placed five pickerel (*Esox reticulatus*), of two pounds each, in the other three mascalonge, weighing one and one-half pounds each. At the end of the first year two of the pickerel died from the effects of bites given by their fellow prisoners. The remaining six (three pickerel and three mascalonge) continued to grow rapidly for four years; after this time their increase was hardly perceptible, though feeding as well as formerly. At the end of the seventh year the pond was removed to make place for other improvements, when the six fish were found to weigh as follows: Two female pickerel eleven and thirteen pounds each. The male ten pounds. Two female mascalonge twenty one and twenty-three pounds. The male eighteen pounds. The mascalonge, although the smallest fish on the start, were seen to outgrow rapidly the pickerel, and continued to do so until destroyed. This growth was probably not so rapid as it would have been in their natural state, and its imperfection was also shown from the fact that none of them ever exhibited any sexual proclivities or development in the spawning season.

This experiment, I think, goes to prove, with the many other observations made by intelligent fishermen, that the rapidity of growth is greatly in favor of the mascalonge; although many others are of the contrary opinion. There are other points, and very important ones to the fish culturist, in favor of this fish. Its great size, superior game and table qualities are well known; but little mention, however, has been made, or notice taken, of its immense quantity of spawn, which is vastly superior in the number of its eggs to any of its genus. To satisfy ourselves on this point, we have made many careful estimates, of which the following is an average result:—

	Fish.	Roes.	Eggs.
Mascalonge	48 lbs.	5½ lbs.	305,000
"	36 "	3½ "	220,000
Pickerel	20 "	2 "	105,000
"	14 "	1½ "	80,000

The eggs are about the same size in each, and but little larger than those of the white fish, with these two advantages in favor of the mascalonge, viz.: rapidity of growth and superior fecundity. Living upon the same varieties of food, and frequenting like localities, we would expect to find this fish much more numerous than its worthless congener, the pickerel, but from our own observation and the reliable statements of fishermen whose observation extends over a period of forty years, we can safely assert that the latter fish has always averaged a hundred or more in number to one of the former. This being the fact, how are we to account for the difference in the relative numbers of these two fish? The common belief is that this difference is caused by the subsidence of high water in May, at which period the mascalonge is known to spawn, leaving its eggs exposed on the dry mud, while the spawn of the pickerel, deposited the last of March or first of April, is not liable to this wholesale accident. This, however, does not admit of a satisfactory explanation, as the rise and fall of the water in our marshes are as frequent and extensive in April as in the latter part of May, so that this casualty to the deposited eggs would be equalized between the two varieties in a series of years.

In 1862, I think, I was put on the right track by a Sandusky Bay fisherman. He accounts for the difference in the number of these two fish in this way: "You see it is them bull frogs that eats them mascalonge eggs. They never touch the pickerel's eggs. They are spawning time themselves, and you know a fish or a reptile don't eat much when they are spawning. But when they get cleverly over it they are right hungry and in time for the mascalonge, who are then on their spawning beds. In the early spring we don't take frogs with bait; we have to hook 'em and trap 'em; but later they will take bait, flying or sitting, and spawn is as good bait as a bit of red flag. To tell the truth, they are generally crammed with it." I have since had the opportunity of veritying the truth of this last remark, and when we consider the number of frogs that once frequented these marshes, we are only surprised that the mascalonge was not long ago annihilated. In 1865 one firm alone at Fremont, Ohio, shipped 16,000 dozen frogs, taken in the marshes of Sandusky Bay and Port Clinton. Owing to this excessive fishing the frog to day is about exterminated.

The water puppy (*Menobranchus lateralis*), almost as abundant, inhabits the lake (Lake Erie), and visits the marshes in April for the purpose of spawning, comparatively few remaining in this locality throughout the year. I once witnessed on such an occasion the entrance of over three acres of marsh water alive with this lizard, apparently copulating. Mr. George Clark, of Ecorse, Michigan, in

the fall of 1868 saw great numbers feeding on the bottom of his seining ground at Grass Island in the Detroit river. He had a fine mesh put in the bag of his seine, and at a single haul, as near as he could compute, took, little and big, over 7,000 of these lizards; 2,000 of the largest were crammed "like pill boxes with white fish eggs." All wild ducks are great spawn eaters, but their depredations will apply equally to the destruction of the eggs of both fishes under consideration: so that we may look to the frog, water puppy, and water insects common to warm weather, as the special enemies of the mascalonge spawn.

The State has made a small appropriation to be used in experimenting with this fish, numbers of which are now being placed in suitable pens to await the ripening period. The eggs separate and impregnate as readily as those of the trout. The fry feed equally well. What we want next is extermination of the pickerel, and a law to protect the mascalonge. Then there is no reason why our marshy streams and estuaries should not, in a few years, team with this noble fish. DR. E. STERLING."

SALMON BREEDING IN CANADA.—A dispatch from Newcastle to the Toronto *Mail*, under date of July 11th, says of Mr. Samuel Wilmot's enterprise:—There is a splendid catch of salmon hereabouts, which is satisfactory evidence of Wilmot's salmon breeding. Mr. Wilmot caused two nets to be set in Lake Ontario on Saturday last, a little to the west of Port Newcastle, and about a quarter of a mile on either side of the outlet of his creek. On Monday morning twenty-one fine salmon were taken, and this morning twenty-two more were captured. These fish average in weight from seven to sixteen pounds. Many of them were sold here, the balance being shipped to the Toronto market. This handsome catch of fish in two days with only two nets, quite equals the palmiest days of salmon fishing in Lake Ontario thirty or forty years ago. This fact speaks volumes in itself in favor of fish breeding and fish protection in our waters.

MORE CONNECTICUT SALMON.—The Hartford *Times* says that the Hon. Henry B. Harrison of New Haven, writes to Dr. Hudson, one of the fish commissioners, that he has just seen a salmon weighing eleven pounds. It was caught July 6th, in a pound at Clinton, at the mouth of the Connecticut; and he informs Dr. Hudson of the fact, as an evidence of the good prospects of the success of the fish commissioners in their labors to restock the Connecticut with that delicious fish.

Natural History.

THE GREAT AUK.

IN FOREST AND STREAM, Vol. II, No. 16, I gave some account of that strange oceanic bird, now believed to be extinct, the Great Auk (*Alca impennis*). I mentioned that from all the evidence I had been able to collect, no specimen of this bird had been seen around the coasts of Newfoundland during the last thirty years. It is true that one is reported to have been picked up in 1853 in Trinity Bay, and another is said to have been taken by Captain Sterling in 1856, but both reports are doubtful. The great auk, I fear, must now be reckoned among the things that have been, though in the sixteenth and seventeenth centuries they were to be seen in myriads on the low rocky islands of the eastern coast of this island, and immense flocks of them were encountered by the mariners of those days as far out as the Great Bank. Now the discovery of a single living specimen would be hailed as a wonderful event, and the captor would be reckoned a most fortunate man. There is still the bare possibility that on one or more of the islands off Eastern Labrador a few of the species may still exist, for these solitudes are never visited either by seal hunter or cod-fisher.* There is no longer any hope that the bird might be found in Iceland. The last auk was shot on an isolated rock off the south coast of Iceland in 1844, and is now in the Museum of Copenhagen. In Greenland, where, in the days of Egede, Crauz, and Fabricius it was so common, it is now extinct. The Royal Museum of Copenhagen has been for years offering a large reward among the Greenlanders for a specimen, but in vain. In his "Water Babies" Kingsley represents the last of the "gare fowl" or great auks standing on the "All-alone Stone," and relating the sad story of the decline and downfall of its family, the crisis having been hastened by a volcanic eruption, in 1830, in which Gair-fowl's Kerry, an island off the coast of Iceland, on which the gare-fowl dwelt, was swallowed up. It is worth notice that the name gare-fowl, given to the great auk, is of Norse and Icelandic origin, in which language it is named *Geirfuge* and *Geiful*, and in Swedish *Garfogel*. Not only are living specimens in demand, but the skeleton even of a departed auk is exceedingly rare and precious. In all the museums of Europe and America there are only seventy-two specimens of the bird, and about sixty-five eggs. Three of these specimens were found in Funk Island, off the northeastern coast of Newfoundland, in 1804. They came into the possession of Bishop Field, who forwarded one to Agassiz, another to Professor Newton, of Cambridge, England, and the third ultimately reached the British Museum, where, I believe, there is but one other specimen brought from the Orkneys in 1812*

This Funk Island is the only spot where, as far as is known at present, a search for skeletons of the bird is likely to be rewarded with success. In 1841, Peter Stuwitz, a Norwegian naturalist, visited Funk Island, and there saw enormous heaps and skeletons of the great auk lying about. He took away with him a quantity of these bones, which are now in the museum of Christiania. This island was for unknown centuries one of the favorite resorts of the great auk, and probably is the one referred to by Captain Whitbourne in the following extract from his book on Newfoundland, published in the reign of James I: "These Penguins are as bigge as Geese, and flye not, for they have but a little short wing, and they multiply so infinitely upon *a certain flat island* that men drive them from thence upon a board into their boats by hundreds at a time, as if God had made the innocency of so poore a creature to become such an admirable instrument for the sustentation of man." Funk Island corresponds to this description, being a low, flat, granitic rock, about half a mile in length and a quarter of a mile in breadth, lying thirty miles east of Cape Freels, buffetted by the stormy waves of the North Atlantic, so that only in very calm weather is it possible to land, for there is no cover or harbor. The soil is a dark-colored peat, and in many places consists almost wholly of the bones of sea fowl, chief among them being the bones of our subject. The island is uninhabited by man, but myriads of sea birds of every description cover its surface, and in the breeding season it is scarcely possible to move about without treading on their eggs, so thickly are they spread over the surface.

In 1874 two Englishmen visited Newfoundland, and at my suggestion they landed on Funk Island to search for bones of the great auk. They were only able to stay one hour, as the wind began to rise, and with it the swell of the ocean. Mr. John Milne, one of these gentlemen, has since published a very interesting account of this visit, in which he tells us that his party were successful, in that short time, in finding bones which indicated the pre-existence of at least fifty of these birds. These, however, were of such a fragmentary character that "it is probable they will hardly suffice to complete a perfect skeleton. The collection which has been made, notwithstanding its deficiencies, will nevertheless be sufficient to throw considerable light on the osteology of the bird. I understand that the collection has been placed in the hands of Prof. Owen. The remains were found from one foot to two feet below the surface, and in some places even projected through the soil into the underground nests of the puffins. Mr. Milne says that "on none of the beaks does any trace of a horny covering remain, a covering which would most likely have resisted the attack of time longer than any other, from which fact, together with the general brown and aged appearance of portions it may be reasonably assumed that they were interred at a remote period." The best description of the appearance of the great auk is contained in the English *Pilot* for 1774, as follows: "They never go beyond the bank as others do, for they are always out it or in it, several of them together, sometimes more, sometimes less, but never less than two together. They are large fowls, about the size of a goose, a coal-black head and back, with a white belly and a milk-white spot under one of their eyes, which nature has ordered to be under their right eye—an extraordinary mark. These birds never fly, for their wings are very short, and most like the fins of fish, having nothing upon them but a sort of down and short feathers." It must have been a curious sight two hundred years ago to behold these wild, lonely islands around our shores, literally covered with the strange figures of these birds, as they waddled slowly about in an erect position, with their broad, webbed feet and short wings, resembling the flippers of a seal. These wings were not constituted for flight, but were admirable paddles in the water, enabling the bird to move about even more swiftly than the loon. The legs were extremely short but powerful, and placed so much posteriorly that in resting on the rocks the birds assumed an upright attitude, the whole of the leg and toes being applied to the surface†

The great auk is a native of the northern hemisphere, the penguin being its relative in the southern. Professor Owen has shown that it differed from the latter in the form of the beak and many other osteological details, and is so closely allied to the existing auks, guillemots and puffins as to be classed with them in the same family, *Alcidæ*, which is included in the order of ANSERES, or Swimming Birds. The causes of its extermination are not difficult to discover. Its short wings and peculiar conformation rendered it helpless on land, while its flesh and feathers were so valuable as to invite the rapacity of man. There were few suitable breeding places, and when these were invaded it could not fly elsewhere, and had no choice but to die calmly. In the sharp "struggle for existence" to which nature subjects her animated productions, such a bird as the great auk must perish early. It was too innocent to hold its own in this rough world. Its cousin-german, the little auk, survives still, just because it had been favored with a greater development of wing, so as to make this an organ of flight. The razor-billed auk, another relative, also flourishes around these shores for the same reason; but the places that knew the great auk shall know it no more forever. The dodo has shared the same fate; and we may perhaps be inclined to join in the philosopher's song—

"The dodo is dead, so he cannot sing now,
Yet why should a cloud overshadow our brow?"

It seems to me that a properly equipped expedition to Funk Island would be successful in securing many skeletons of this extinct bird. If a party were to proceed there in July or August, and spend a few days on the island so as to make a thorough search, under the guidance of a person having some knowledge of the bird, so as to distinguish its bones from other remains, it seems very probable that very successful results would be reached. If in a single hour a hurried search was rewarded in the way I have described, in 1874, and if in 1864 a short exploration exhumed three perfect skeletons, what might we not anticipate from a prolonged search, especially as the area is so limited. At all events there is no other locality likely to yield such satisfactory returns to an explorer.

M. HARVEY.

St. Johns, N. F., June 17th, 1876.

* There is at least one specimen in the Smithsonian cabinet, another in the Philadelphia Academy of Sciences, and a third in the Girard cabinet at Vassar College. The last is the one from which Audubon made his drawing, and was caught on the banks of Newfoundland.—ED.

† Its solitary egg was laid either in clefts of the rocks or in deep burrows, was five inches long, and was covered with curious markings resembling Chinese characters.—ED.

THE BIRDS OF OUR SUBURBS.

Our excellent friend, Mr. E. P. Bicknell, sends us a transcript from his diary during May at Riverdale, a beautiful village on the east side of the Hudson just below Yonkers. It seems to be a peculiarly favorable place for birds, such varieties as the cross-bill having been found breeding there, yet is not 20 miles from our office, and almost within the limits of New York City. It is not necessary to go a long distance to find facts in ornithology; it very often happens in birds, as in many other matters, that the best is nearest us. Mr. Bicknell writes as follows:—

May 1.—Cool; temperature 33½°. Northwest wind and slight fall of snow.

May 20.—Cool; south wind in afternoon. Cat-bird and white-crowned sparrow (*Zonotrichia leucophrys*) noted.

May 5th.—The wood thrush has arrived; also the yellow warbler (*Dendroica æstiva*) and least flycatcher (*Empidonax minimus*). Buttercups in bloom. Warm south wind all day, veering to east in the afternoon.

May 6.—Rain during the night, followed by a fine, fresh morning, enlivened by the song of the wood thrush from the dripping woods. The Baltimore oriole, bobolink and ruby-throated humming-bird were seen for the first time; all males. The orioles may generally be seen among the scarlet blossoms of the *Pyrus japonica* on their first arrival; as well as the humming-birds. Trees and vegetation have made rapid progress toward their summer dress during the day; pear trees are in blossom.

May 7.—Very warm; temperature reached 82° on the north side of the house. Conspicuous among the arrivals are the great-crested flycatcher (*Myiarchus crinitus*), king bird (*Tyrannus carolinensis*) and yellow-breasted chat (*Icteria virens*). The three vireos, (*V. noveboracensis, flavifrons* and *gilvus*), the Maryland yellow-throat (*Geothlypis trichas*) and solitary tattler (*Totanus solitarius*) are also here. A few apple and dogwood blossoms out. Saw two water snakes about 2½ feet in length, and several dragon flies.

May 8.—Southerly wind, partly cloudy. Another very warm day. Innumerable warblers have arrived during the night, and the woods and trees are now alive with them. Among the new arrivals I noticed the black poll warbler (*Dendroica striata*), prairie warbler (*D. discolor*), chestnut-sided (*D. pensylvanica*), blue winged yellow (*Helminthophaga pinus*) and the water thrush (*Seiurus noveboracensis*). Shot a rose-breasted grosbeak (*Goniaphea ludoviciana*) which are very uncommon here, rarely more than one or two being seen every year; heretofore the first arrivals have invariably been males.

May 10.—Saw one scarlet tanager (*Pyranga rubra*) and a male orchard oriole (*Icterus spurius*) in immature plumage, and a black-throated blue warbler (*Dendroica cærulescens*).

May 11.—Clear; north to west winds. Olive-backed thrush (*Turdus Swainsoni*) abundant; Blackburnian (*Dendroica Blackburniæ*), black and yellow (*D. maculosa*) and Cape May (*D. tigrina*) warblers all made their first appearance.

May 12.—Several Nashville warblers (*Helminthophaga ruficapilla*). Robin's nest with two eggs; this is the first day I have heard the call of the quail.

May 13.—Worm-eating warbler (*Helmitherus vermivorus*), green black-capped flycatching warbler (*Myiodioctes pusillus*), and bittern (*Botaurus minor*); and a flock of about 125 white bellied swallows (*Tachycineta bicolor*).

May 15.—Cloudy all day with east wind. Red-eyed vireo (*Vireo olivaceus*) and bay-breasted warbler (*Dendroica castanea*) noted. The hooded flycatching warbler (*Myiodioctes mitratus*) has made its appearance in a piece of woodland, where it is generally common; its presence is betrayed by its lively notes.

May 16.—Wood pewee (*Contopus virens*) first heard this morning. Wood thrushes and red-winged blackbirds are building.

May 17.—The blue-winged yellow warbler and wood pewee are moving about with building materials. The indigo-bird (*Cyanospiza cyanea*), one of our latest migrants, appeared to-day.

May 19.—A brood of five blue-birds are able to fly.

May 20.—Canada flycatching warbler (*Myiodioctes canadensis*); yellow-winged woodpecker's nest, four eggs. Azaleas in blossom.

May 21.—Least bittern (*Ardea exilis*) seen; nest of chipping sparrow with two eggs; first egg of the cow bird this season found in nest of the Phœbe-bird.

May 22.—Clear; strong west wind during the night. Several Tennessee warblers (*Helminthophaga peregrina*) noted. Heard the notes of the Acadian flycatcher (*Empidonax acadicus*), a few of which are with us every summers, in three pieces of shady woods. Found a cow-bird's egg in the empty nest of a cat-bird.

May 23.—Cloudy; cool; high wind from the northeast. *Dendroica æstiva* abundant, and *D. æstiva* building. The cow-bird's egg which yesterday encumbered the nest of the cat-bird is missing to-day, and an egg of the rightful owner substituted.

May 25.—Several Traill's flycatchers (*Empidonax Traillii*) noticed near swampy ground; they appear to have a great preference for elm trees. Yellow-winged sparrows (*Coturniculus passerinus*) seen for first time this season.

May 26.—Nest of the *Spizella pusilla* containing two eggs. The Maryland yellow-throats are building.

May 28.—Mourning warbler (*Geothlypis philadelphia*) seen; the only one noted this spring; a single specimen was also seen last spring, the date being May 22d.

May 30.—Shot a fine male specimen of the Kentucky warbler (*Oporornis formosus*) in full song. Nests of the Wilson's thrush, with three eggs, of the brown thrasher, on the ground, with four eggs, and of th

towhee (*Pipilo*) also with four eggs, were found; all the eggs were fresh.

May 31.—Cool; temperature 42°. A Maryland yellow-throat's nest with two eggs; one of the yellow-breasted chat, with three eggs, and a nest of the towhee with four eggs containing well-advanced embryos, were found.

I have been expecting to see more of Dr. Abbott's interesting and valuable notes, but as yet have been disappointed. E. P. BICKNELL.

NEW WORK BY DR. COUES.—Some weeks ago we stated that Dr. Elliott Coues was writing a companion volume to his "Birds of the Northwest," and expressed our gratification. Dr. Coues, however, advised us that we were misinformed, and we printed his letter to that effect. It now appears, however, that we were not so far out of the way in spirit as in letter, since we have just received from Dr. Coues himself proof-sheets of a portion of a new work to be styled "Birds of the Colorado." Although printed much in the style of his "Birds of the Northwest," the text is different in every particular, and treats of a quite different set of birds, so that it is a complimentary rather than companion volume to the other. Not only the full synonymy and description of each species is given, but also its range, habits, nidification, &c., with voluminous references and quotations from late monographs and local lists. It must be very gratifying to field ornithologists in the West to have their fragmentary material so quickly and skillfully taken up, and made to contribute to the complete and felicitous whole of the bird's biography. Ornithology is making rapid advances when this is done as promptly as at the present time. We would be glad if we could avail ourselves of Dr. Coues's permission to reproduce some pages of the new book, but lack of space prevents. To the ruby-crowned kinglet, for example, well known in one sense and poorly known in another, six octavo pages are given. The table of synonymy includes fourteen separate names and 104 references to previous mention of this bird, nine of which are to Dr. Coues's own writings. The specific characters are next briefly given in Latin, preceding a fuller diagnosis in English. The manners, distribution, obscure breeding, sweet and powerful song, and food are then written out. It is a book which will be read with delight, and we are sorry to hear that its appearance will probably be delayed for some time to come.

THE WOOD IBIS AT TROY.—Mr Frederic S. Webster, of Troy, N. Y., records for us the capture of a male wood ibis (*Tantalus loculator*) in full plumage near that city. It was shot on June 24th on a small lake. Its proper home is Florida and Louisiana, and it is rare north of Natchez. It is, therefore, what ornithologists call "a good note" to discover it so far north as the centre of this State.

—Mr. George Bird Grinnell of New Haven, who accompanied Lieut. Ludlow to the Black Hills in 1874, has published as a pamphlet extracted from the *American Journal of Science and Arts* for July, a description of *Uintacrinus socialis*, from the Uinta-Mts., which is specially interesting as being the first crinoid known from the cretaceous rocks of this continent. The fact that it lacked a stem indicates the advance made by some of the crinoids that survived until the cretaceous, over the older paleozoic forms.

NOTES FROM OUR CORRESPONDENTS.—"Teal" writes us that some years ago near the Bass River, in Danvers, Mass., a friend of his caught a spotted sandpiper which had one of its feet fast in a mussel shell. He supposed the bird accidentally stepped into the gaping shell, which the mussel instantly closed, holding the foot..... Mr. D. H. Eaton says the black-throated buntings are very common at Peotone, Will Co., Ill., breeding in hedges. He tells us that there the bobolink is known as the "butter-bird," and the bittern (*B. minor*) as the "thunder-pump." Of the last he found seven eggs on June 3d, far advanced in incubation.....J. H. Ragsdale finds that the upland plover (*Actiturus Bartramius*) breeds at Gainesville, Texas. ....How to ascertain the sex of pigeons? is answered by C. T. J. (Salem, Mass). He says: "I have found that by taking the bird by the legs, allowing the feet to grasp the fore-finger of the left hand, and with the third and fore-finger of the right hand drawing the head gently forward by the bill, a male bird will drop its tail, while a female will raise it. Almost every bird will do the same."..... Mr. W. H. Seabury (Norfolk, Va.,) relates that lately every evening when he has turned on the water to sprinkle his flowers from his hose, a cat bird has immediately made its appearance and flown into and out of the shower to enjoy the bath. No matter at what time the sprinkling was done the bird was sure to be on hand; yet it did not stay on Mr. Seabury's lot, but always came from a neighbor's grounds.

ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN, JULY 10 TO JULY 16.—Eight barrowing owls (*Athene cunicularia*), three swift foxes (*Vulpes velox*), two whip snakes (*Masticophis flavigularis*), two prairie wolves (*Canis latrans*), presented by Chas. Noble, Philadelphia; one young alligator (*A. mississippiensis*), presented by John Schmeider, Philadelphia; two rattlesnakes (*Crotalus durissus*), presented by S. W. Hudson, Hadsondale, Pa.; one bittern (*Botaurus minor*), presented by R. McClinton, Philadelphia. ARTHUR E. BROWN, Gen'l Supt.

ARRIVALS AT THE CENTRAL PARK MENAGERIE, JULY 10 TO JULY 15.—Two tapirs (*Tapirus americanus*), one capybara (*Hydrochoerus capabara*), one rhea (*Rhea americana*), and two ring doves (*Turtur risorius*), bred in the menagerie. W. A. CONKLIN, Director.

THE HEAT.—It should be borne in mind that sun stroke, so-called, is produced not only by exposure to the sun. An extremly high temperature of the body is likely to produce what is termed in the East Indies "heat applopexy," with the most fatal results. One should, if possible abolish mental care or worry, as well as all undue excitement during the heated term, as all are predisposing causes, tending to raise the temperature of the body and force the blood to the head. Work early and late, resting from labor in the middle of the day. Drink sparingly and eat moderately of light food and you can laugh at the heat.

The Kennel.

ON BACKING.

WE are in receipt of a letter from our shooting friend "O. F.," of Ameram, N. Y., in which he states that his young bitch, Feathers, from the kennel of our Field Editor, is doing wonders; that now, although but eight months old, she works with the steadiness of an old dog, and is very staunch on woodcock, he having shot a number of birds from her points this season. And the question is then asked us whether is better to work a young dog with an old one in order to perfect him in the way he should go. This is a matter of much importance in breaking young dogs, and deserves the attention of all who intend to break their dog in the best manner. Many persons think that in order to get a young one to hunt he must have the example of an older dog. This is a mistake, as it is almost as natural for a pup or young dog to hunt for game as it is to eat or drink, but yet no young one can be properly broken without working him in company with other dogs. If a pup or yonng dog is worked alone he fails to learn the very important qualificatioe of "backing;" no dog is entitled to be called first-class unless he will staunchly back the points of other dogs, and this accomplishment can only be attained by working them in company. Yet we have seen many young dogs completely spoiled by working them too much when very young with good old dogs. They very soon discover that the old dogs know all about finding the game, and they, instead of trying to find it themselves, take to watching and backing their elders; consequently great care should be taken with the youngsters that they do not fall into this habit. As soon as a young dog begins to watch the older one and to depend upon him to find the birds, he should be withdrawn and worked entirely alone until he becomes fully confirmed in the habit of depending upon his own efforts to find the game, and as soon as this habit is attained he should be worked in company with older and well-broken dogs in order to confirm in him the habit of "backing."

THE LAVERACK PETREL.—The Laverack bitch, Petrel, for the Strathroy Kennels, arrived per steamer City of Chester on the 10th inst. She is by Llewellin's Prince out of Lill II, and is in whelp to Dan.

TREATMENT OF SURFEIT MANGE.

NEW YORK, July 13th, 1876.

EDITOR FOREST AND STREAM:—

In last week's issue your correspondent "R. H. T.," of Rockville, Conn., says he has a fine pointer dog that is breaking out all over with fine pimples, and that there are several spots where the hair has fallen off. As I had a pointer pup so affected this spring, and treated two others belonging to friends, allow me to give you my idea of the disease and its treatment.

The dog in question is, in all probability, suffering from surfeit mange, or an impoverished condition of the blood; these pimples, if neglected, will increase in quantity, and where two or three occur in close proximity cause the hair to fall off. Matter can often be squeezed out of the smaller ones. Now, provided they are caused by overfeeding too much food of the same kind, want of salt, exercise, etc., I would advise a good purge, say three compound cathartic pills U. S., or an ounce of Rochelle salts, or two ounces of castor oil with six drops of laudanum in it. Any of the above are good. Then anoint the dog every other morning until he has received three applications, washing off on the alternate days with the following preparation: Proto-iodide of mercury, 2 drachms; lard, 18 ounces; oil of turpentine, 40 drops; powdered sulphur, 10 ounces; coal tar, 5 drachms. Internally give the following tonic three times a day: Citrate of iron and quinine, 5 grains, made into a pill. In the cases where I have adopted this treatment the pimples all disappeared after the second application of the ointment, but I continued the tonic for two weeks afterwards. I also changed the dog's diet, withholding all animal food, and giving a farinaceous diet entirely. The coal tar in the ointment prevented the dogs from licking it off. The above amount of ointment would be sufficient for two applications for pointers, but not more than one application to setters, on account of their long hair. It should, moreover, be thoroughly rubbed in, a task which will occupy over half an hour.

Should the mange be due to a poor state of the blood, caused either by hereditary predispostion, or poor feeding, neglect, etc., a milder cathartic should be employed, followed by the ointment three times, and a pill three times a day, each pill containing five grains of citrate of iron and quinine, two drops of powdered solution of arsenic and one-sixty-fourth of a grain of the bi-chloride of mercury. After two weeks I would omit the bi-chloride in the pill and continue with the quinine and iron. Should there be any sores on the dog apply zinc ointment to them once a day until they dry up; a little coal tar mixed with the ointment will keep the dog from licking them. This zinc ointment, by the by, is the best application for any wound or cut received by a dog. Well cooked meat, with rice, crackers, and old Indian meal should be his chief articles of diet. I might here say that many dogs are said to have the mange when like are the real source of trouble. The symptoms are almost identical with those of mange, caused by dirty kennels, and in many instances associated with it. The hair will fall off in patches about the size of a five-cent nickel all over the body, and the dog found occupying his leisure moments in scratching. Anoint the dog thoroughly with any oil or lard for two days in succession, and the lice will all disappear; don't put him back again in his kennel before it is well washed and cleansed with carbolic acid water, or you will have all your trouble for nought.

I am glad to see that "Idstone" and others of your readers agree with me in regard to docking dog's tails, and that chopping off joints will not improve them; but that a constant endeavor on the part of every breeder to breed to short-tailed dogs in preference to long-tailed ones, is the only way by which we can improve the present deformity.

Whisky and her pups are doing finely. I have entered her and her litter, together with my Daisy, for the Centennial Bench Show. Would that Guido's Lilly and her family could also be present.

W. S. WEBB.

DR. WEBB'S REMEDY.

WEST HOBOKEN, July 14th, 1876.

EDITOR FOREST AND STREAM:—

During the last week in June a young setter of mine, 14 years old, was taken sick; he was coughing all day and night, and as he otherwise showed no signs of sickness, I thought he had only caught a bad cold, and to stop the cough I gave him vinegar and honey. But he did not improve. The cough, although not so violent became more rattling. The eyes commenced to run, and had a sickly, dull expression. The nose was dry and warm, appetite little or none, and the dog had seemingly pains in the lungs. He grew weak, and acted as if half drunk. Having of late lost several young dogs, in spite of all medicine and the best of care, I had partly lost faith in all remedies generally used against distemper, and as I well remembered the excellent article of Dr. Webb, in a late number of FOREST AND STREAM, I looked it up, read it over again, and came to the conclusion that my Sport had pneumonia, and that I should try Dr. Webb's remedy. I first gave at noon a powder of 1gr. calomel and 1gr. tartarized antimony, and inside of fifteen minutes the dog vomited repeatedly a greenish slimy mass, and drank during this time a good deal of water. Same night I gave a pill of 4grs. of blue mass, and the next morning 4grs. of quinine. Next night 4grs. of blue mass, and in the morning 4gas. of quisine again. For the next two days I only gave 4grs. of quinine each day, then left out a day, and on the following gave 1grs. of quinine once more. The first day after giving the medicine the expression of the eye was clearer, but nose and and eyes were running considerably more than on the previous day. I each day fed beef soup or milk with a fresh egg in it. The second day after the medicine was first given he looked the very same as on the day before, but seemed to be in better spirits. Third day, the running of eyes and nose was considerably better, cough and pains in the breast seemed also not so troublesome, and from this time he recovered rapidly. I hereby tender Dr. Webb my best thanks for publishing his valuable experience, and in conclusion will only remark that all owners and breeders of fine dogs cannot appreciate it enough. JUSTUS.

KENNEL PRODUCE.—Our friend Theo. Morford, Esq., of Newton, N. J., informs us that his orange and white bitch Puss, on the 13th inst. gave birth to five orange and white whelps—four of which are dogs, one pup—and as these pups are by the famous orange and white dog Joe, purchased from Mr. Morford by Mr. Shipman, they will no doubt be highly prized.

J. W. Foster's (Leesburg, Va.) Field Trial bitch Kirby on the 10th inst., whelped nine pups by Luther Adam's celebrated dog Rock. Five are dog and four are bitches—three lemon beltons, three blue beltons, two black and white, and one black, white and tan.

—Dr. S. Fleet Spier's Gordon setter, Daisy, on the 7th inst, whelped nine puppies all black and tan, by his Gypsum.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HEADQUARTERS SCHUYLKILL NAVY,
PHILADELPHIA, July 17, 1876.

The time of closing the entries for the Centennial Regattas has been extended to August 1st.

JOHN GILLINGHAM, Sec'y.

CENTENNIAL NOTES.—Our Philadelphia correspondent writes under date of July 17th as follows: The International Regatta Committee, as I predicted last week, have extended the time for closing the entries for the Centennial Regattas to August 1st. Although the matter has been fully set forth in all the sporting and many of the daily papers, there are many clubs that do not seem to have understood that entries should have been in by July 15. The Schuylkill Navy will have to make extensive preparations to house the boats that will come, and it is of the utmost importance that they should know how many boats will have to be accommodated. Circulars will at once be issued, setting forth these facts. The entries are not announced, as, of course, they should not be, until the time of closing, but they are as numerous as the most sanguine could expect.

For the inter-collegiate races the Dublin University Rowing Club have entered for the fours and singles. The crew of First Trinity College, Cambridge, sailed last week and will be in New York on Saturday or Sunday next. They will row in the amateur and undergraduate races of fours and singles. Mr. Wm. B. Close will represent Cambridge University in the singles. Princeton has catered for fours and doubles for amateur and undergraduate. Harvard has been pledged, and Yale is announced as coming. Even if no others enter this will make such a race as has never been seen.

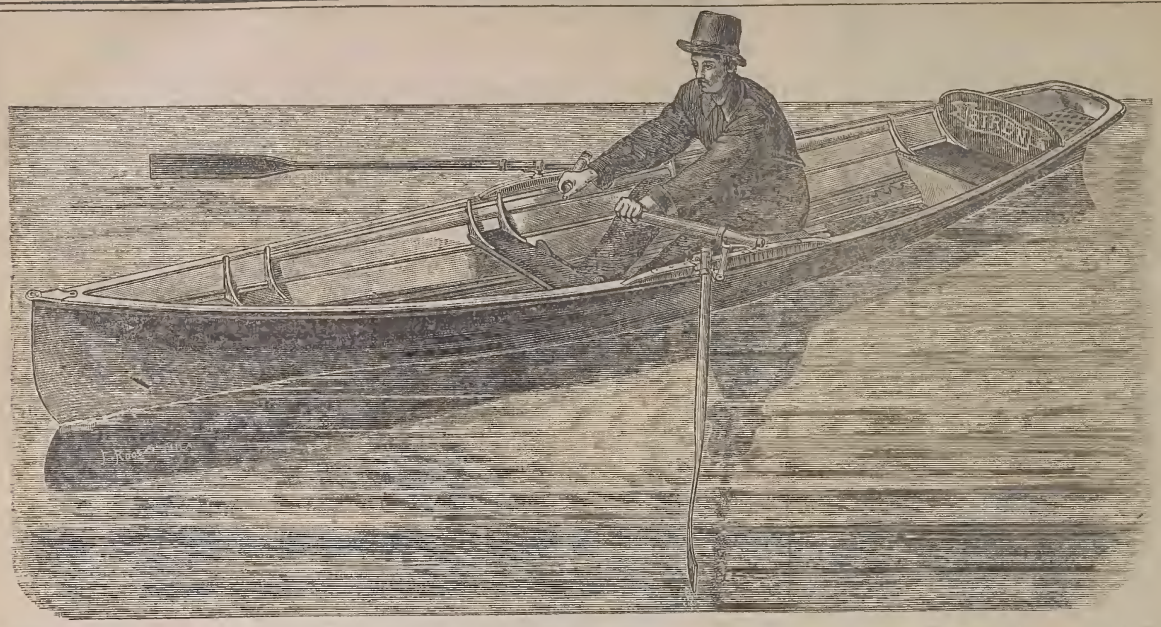
Of the amateur clubs there are many entries. The Argonautas, Beaverwycks, and Atalantas will have another chance to row it out.

The Thames professional crew will meet the Tyne, the the Paris crew, the New York crew, the Halifax crew, and one or two crews from Pittsburgh. It behooves the committee in charge to raise at once the money pledged for the prizes. SCULLS.

INTERNATIONAL ROWING.—We published last week a brief dispatch announcing the fact that Cambridge University would be represented on the Schuylkill this summer. We have now copies of the letters from Mr. Close, Secretary of the Trinity (Cambridge) Boat Club, and Mr. Hickson, Captain of the Dublin U. R. C., to Commodore Ferguson, naming their entries. They are as follows:—

DEAR SIR:—I am happy to inform you that at a meeting of the First Trinity Boat Club it was unanimously decided to accept your very kind invitation to participate in the intercollegiate international regatta to be held at Philadelphia under the direction of the Schuylkill Navy. Will you, therefore, kindly enter the First Trinity Boat Club as the "Black Prince" (our regatta title) for the intercollegiate and international fours, and kindly enter me as Cambridge University for the sculling race, as I should like to be entered for that as well? We have taken places on the White Star steamer Britannic, sailing from Liverpool on the 13th of July for New York, and will be in Philadelphia as soon as we can. The following are the gentlemen who will comprise the crew: Bow, J. A. Jameson; 2d, W. B. Close; 3d, G. L. N. Mann; stroke, J. P. Penrose; reserve, F. Walker.

WILLIAM B. CLOSE,
Sec'y Trinity Boat Club, Cambridge, England.



June 25th, 1876.

MY DEAR SIR:—I beg to send you our entries for the international four-oared race and for the international graduates' race at Philadelphia. The following are the names of the gentlemen who will represent our club at your regatta: George Pentland, Cr ker Barrington, Charles B. Barrington, George A. F. Hickson, and A. Pentland, substitute. For scullers' cup, A. Pentland, and George Pentland, substitute.

We hereby certify on honor that each of these gentlemen are amateurs according to your definition of amateur, as published in the *Field*, and are not paid, directly or indirectly, for their services.

GEORGE A. F. HICKSON, Captain D. U. R. C.

Ringsend, Dublin, Ireland, June, 18th, 1876.

A New Rowing Gear.—We present this week a cut of the latest improvement in rowing gear, the invention of Mr. William Lyman, of Middlefield, Connecticut. Every one that has ever rowed has felt that his boat was going wrong end foremost, and has wished that he could see where he was going without incurring the risk of a dislocated neck. Often it becomes an absolute necessity to either use a paddle or resort to the awkward expedient of pushing, neither of which is nearly so economical of power as pulling.

Mr. Lyman has made his oar in two parts, both of which are fastened to the gunwale by a ball and socket joint, giving full and free play in every direction. The shaft of the oar is placed forward of the loom, and the two parts are joined by a light jointed lever or connecting rod, in such a manner that the blade travels in the same direction as the power applied at the handle, instead of in the opposite direction, as in the ordinary oar. The oarsman sits facing the bow; pulls as in an ordinary boat; and goes ahead. The ball is cast on a beveled block that fits in a corresponding slot in a piece of metal screwed to the gunwale, and is adjusted to or detached from any boat in a moment. The whole gear is as light and as strong as an ordinary metal swivel rowlock, and the leverage gives an increase of power that renders the use of shorter sculls equally effective. This is a telling advantage in rowing in narrow creeks or inlets. At each stroke the weight is thrown backward, bringing the bow out of the water, instead of the usual depression of the bow. The oars fold easily back upon the gunwale by drawing the hands back and pushing them outward. When not in use the rigging can be instantly detached and folded up; yet there is no possibility of the oars becoming unshipped by accident even among bushes or reeds. The stroke is perfectly even from catch to finish, and every pound of power exerted tends to drive the boat forward. Its perfect noiselessness in addition to seeing where one is going, will commend it to every one who uses a boat in gunning. It has been successfully used on six-oared barges, and it is adapted to every boat that is rowed from the gunwale.

The College Regatta.—The Freshman race at Saratoga was to have been rowed on Tuesday, but the usual vexations, delays, and postponements which seem to be inseparable from races rowed on this course occurred, and at the time of our going to press—Wednesday morning—none of the events had been decided. This is a disappointment, as we had fully expected to have given our readers an account of at least one day's events in our present issue. However, the postponements, although perhaps resulting in pecuniary benefit to the hotel keepers, are fatal to future rowing on Saratoga Lake, and it is perhaps fortunate that the British university oarsmen have decided to row only at Philadelphia. The annual inter-collegiate regatta, if not killed entirely, will also be rowed elsewhere in future.

The Southern Regatta.—The Southern Club's rowing regatta was held on the 17th inst at Milnesburg, Lake Pontchartrain, resulting as follows:—

First Race—Single scull, one mile. The St. John won, Orleans second, Riverside third. Time, 8m. 58½s. Second Race—Double scull, mile and a half. The Howards won, St. John second, Hope third. Time, 11m. 51s. Third Race—Four-oared barges, two miles. The Hope first. Riverside second, Perseverance third, and Southern fourth. Time, 14m. 36s.

—The yacht Belle V., of Brooklyn, has just returned from a two weeks' cruise on the Hudson, ascending as far as Albany. Her Captain and owner, Capt. F. Van Doorn, and Mr R. E. Borton, represent the trip as having been a most enjoyable one.

Brooklyn Yacht Club.—The annual cruise of this club will commence to-day, the yachts rendezvousing at Glen Cove. The following yachts are reported as certain to join: Schooners, Madeleine, Clio, Comet, Dreadnaught, Syren, Mystic, Lethea, Playful, and Sea Witch; sloops Lizzy L., Niantic, Favorite, White Wing, Kate, Selene, and Undine; The following yachts are reported as likely to join: schooners Estelle, Vision, Gypsie, and Tempest; sloops Arrow, Gracie, and Pirate. An invitation will be extended to Commodore Gifford, of the Countess of Dufferin, to join the fleet. Mr. Gould, proprietor of the Manhasset House, on Shelter Island, has invited the club to visit that place, and promises a subscription of $250 from the guests of the house for prizes. At the last regular monthly meeting, Dr. Johnson moved that a committee be appointed to secure a relief, if possible, for owners of yachts under ninety tons who are now refused a yacht license, and required to have the name of the yacht and the port to which she belongs painted on the stern, pursuant to act of Congress. The resolution was adopted, and Messrs. Johnson, Handley, and Osbourne appointed a committee to take the matter into consideration.

—The feat of crossing the English Channel in a canoe has been accomplished by Lieutenant Colville of the Grenadier Guards, who started from Dover at three o'clock in the morning and paddled into the harbor of Calis at half past nine, doing about thirty miles zizag across the channel in six hours and a half. The exploit is regarded as fully as hazardous as the swimming feats of Webb and Boyton.

The Dory Centennial.—On the 2d inst. the steamship Amerique, from Havre for New York, spoke the dory Centennial, Capt. Johnsen, hence for Queenstown, in latitude 42 50, longitude 62 23. Capt. Johnsen reported all well and that he wanted nothing except to obtain the longitude, which was furnished him.

Yachting in North Carolina.—An interesting and exciting race for a purse of $50 was sailed on Thursday, July 6th, in Core Sound, between the Lucia, a Fair Haven sharpie belonging to Mr. Ives, of Beaufort, and the Sunny Side, a clinker built, open boat, sloop rigged, owned and sailed by Dank Bell, of Morehead City. The Lucia was built by George M. Graves, of Fair Haven, Conn., and beat the famous Law, sharpie, one or more races on Long Island Sound in August, 1875, in races for hotel prizes. The Sunny Side has never been beaten before by an open boat, but the Lucia beat her handsomely. The race was from Harker's Point, in Core Sound, to the point of Shackleford, opposite Fort Macon, Beaufort Harbor, and was a dead beat to the windward, in rough water, strong wind, and against ebb-tide; wind southwest. J. E. W.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Serranus collatus.*
Salmon, *Salmo salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confinis.*	
Land-locked Salmon, *Salmo Gloveri.*	Striped Bass, *Roccus lineatus.*
Grayling, *Thymallus tricolor.*	White Perch, *Morone americana.*
Black Bass, *Micropterus salmoides; M. nigricans.*	Weakfish *Cynoscion regalis.*
	Bluefish, *Pomatomus saltatrix.*
Mascalonge, *Esox nobilior.*	Spanish Mackerel, *Cybium maculatum.*
Pike or Pickerel, *Esox lucius.*	Cero, *Cybium regale.*
Yellow Perch, *Perca flavescens.*	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

For list of seasonable trout flies for July, see our issue of June 29th.

Fish in Market.—The continued warm weather has driven fish off shore into deep water, consequently most varieties are scarcer and have advanced somewhat in price. Striped bass are worth 18 to 20 cents per pound; bluefish, 8 to 10 cents; salmon, 30 cents; mackerel, 12 to 18 cents each; Spanish mackerel, 60 cents per pound; green turtle, 10 cents; terrapin, $12 per dozen; halibut, 18 cents per pound; haddock, 8 cents; codfish, 8 cents; blackfish, 15 cents; flounders, 10 cents; porgies, 12 cents; sea bass, 18 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 18 cents; soft clams, 30 to 60 cents per 100; hard shell crabs, $4 per 100; soft shell crabs, $1.40; frogs, 50 cents per pound.

Bass at Pasque Island.—A paragraph in our last issue mentioned that up to the 12th inst. no bass had been taken at Pasque Island. We have since learned that this was an error. On June 20th the first were taken. Mr. Boylan the "veteran" member of the club landing two weighing 42 pounds each; and on the 26th of the same months he caught one weighing 50 pounds. The catch to date this year is far ahead of that at a similar period last year, the smallest fish weighing 10 pounds. Among the members now at the Pasque Club House are the President, J. J. Donohue (who, by the bye, caught on Saturday last a 40 lb. bass) and family; J. L. Stillmus and family, and C. P. Casserly, of Cincinnati; Solon Humphrys and wife, Sam Brown and wife, Henry Gunther and family, F. O. Herring and wife, Geo. A. Robbins and sons, Dr. Guernsey and daughter, and J. B. Sterns, all of New York, and Edmond De Pestere, of Cuba.

Sheepshead.—Says the Germantown *Telegraph*:—

"For the same reason that the Spanish mackerel avoids the Delaware Bay, the sheepshead seems to be influenced, as it is but rarely this fish is taken above Cape Henlopen. Two years ago, however, one was hooked at Pennsgrove, near Wilmington, weighing six pounds. The person who took it had just cast his line into the water and the fish almost immediately seized the bait. It is said to be the only specimen of the kind ever taken so far up the river."

It is rarely that the sheepshead is taken in the manner described by our contemporary. As a rule he (the sheepshead) is a slow biting fish. In the Great South Bay we fish for him with small soft clams as bait, placed on the hook whole, the shells being first cracked. This saves considerable annoyance from worthless fish, such as sea robins, etc., who would otherwise be continually taking off the bait. The bite of the sheepshead is peculiar and unmistakable, but when baiting with whole clams you must give him time. Let those sharp sheep's teeth of his work through the cracked shell of the clam and get fairly at the bait and strike. Time was when in the channel opposite the Surf House one could almost be certain of a good basket of sheepshead, but now, thanks to the vandals of the South Side, drag nets sweep the bottom in every direction, to the utter destruction of all rod fishing. Of late old mowing machines have been sunk on the sheepshead ground, which will prevent netting, but not until they had been taken in nets by the *ton*. Riding down a few evening since in one of the comfortable drawing-room cars of the Central Railroad, our companion related a joke played on "mine host" Sammis, of Fire Island, which is too good to be kept. A few years since the "Surf" filled up early, mosquitoes were scarce and guests clamored for sheepshead. It so happened that some fishermen in the vicinity had captured a large *drum*, a fish somewhat resembling the sheepshead, but comparatively worthless. The fish was carried up to the hotel and Sammis, supposing it to be a sheepshead, eagerly demanded the price. The fishermen were modest and thought that a "drink all around would be about right." To this the host gladly consented and even repeated the dose, with a request to all of his guests present to "take sogar in their'n" at his expense, but as the fish was being borne in triumph to the kitchen, Charley H., of New York, happened to step in and asked Simmis "What in h—l he was going to do with that cursed drum?" Carnasie was once a great place for sheepshead fishing, but the netters have cleared them out. Thanks to the New Jersey Legislature, Barnegat Bay is free from pounds or drag nets and probably better sheepshead fishing is to be had there than any where along the coast. The sheepshead is not only one of the most gamey of fish, ranging from five to twenty pounds in weight, but his table qualities are unexcelled. Would that there were more of them.

—In a reply to our correspondent "Scales," in our last week's issue the printer neglected to place the enquirer's address after his name which made it appear that we

named July 1st as the commencement of the close season for trout in New York, whereas, the enquiry came from Connecticut, and applied to that State. The close season does not begin in New York until September 15th.

LARGE TURTLE.—A correspondent writing from Norfolk, Va., under date of July 13th, says:—

"One of the pilots while cruising off the Capes last week, struck with a grainse and hauled on board an enormous turtle, and afterward threw him overboard. He said that he was nearly black, with a few light spots; was a different shape from the ordinary green turtle, being more round; that he measnred nine feet long, by eight wide. I think he ought by all means to have brought him up to the city and disposed of him. They often get large sea green turtles, and sometimes have rare sport with big bluefish, while ernising."

This turtle was probably a "leather back" (*Sphargis coriacea*), of which several were captured on the coast at this time last year. Mr. Charles Osborn, of the yacht Dreadnaught, caught one off Long Branch, and another was caught off Stonington, Conn., each about seven feet in length, and weighing 1,100 pounds. One of these turtles was sent to the Smithsonian Institution, and is now on exhibition at Philadelphia.

CASCAPEDIA SALMON FISHING.—Mr. George Dawson, the veteran angler, writes us from Albany under date of July 12th, as follows:—I have just returned from a month on the Cascapedia. The water was too high for fishing until the 21st of June. On that day I took my first salmon, and in eleven days' fishing I bagged forty-one salmon, averaging 25 pounds. My largest was 35½ pounds. My friend Judge Hadley killed one weighing 36½ pounds—his first fish. His 21 averaged 27 pounds. I never had better sport, and never had a higher appreciation of the kingly character of the noble fish. The Messrs. Alman and two friends fished the river at the same time, higher up, and when we left had equalled my score. From one pool, in six successive days, they took 56 fish, as follows: L. Aiman, 11; M. Aiman, 5; Lieut. Sutton, 13; L. Alman, 1; J. A. Smith, 13; Lieut. Sutton, 13. They were all large, averaging, I suppose, at least 23 lbs. The salmon caten on the coast has been immense. The wise action of the Provincial Government is working admirably. Of the glorious incidents of the trip I have no time to say anything just now. We were, however, "happy every hour." G. D.

—The Norwich (Conn) *Courier* says that fishermen along the shore who have been to the Vineyard, report it too early for bass fishing, though the price is high, the fish being worth fifteen cents per pound in New York. Bluefish are very plentiful and cheap at the Vineyard. Several schools were seen, but were not worth the trouble of catching, as they only bring four cents per pound in the New York market.

—The members of the Piscatorius Club of Hartford are making preparations for their annual fishing cruise. They expect to start on the first of August, and have engaged the schooner E. H. Williams to carry the party. Their intention is to visit Philadelphia and devote four days to seeing the wonders of the exhibition. They will cruise along the Jersey coast, and expect some fun in trolling for bluefish. On the return from the centennial they will visit Block Island and other noted fishing grounds on the New England coast. The club was organized sixteen years ago, and is composed of some of the best citizens of Hartford.

NEW JERSEY.—*Kinsey's Ashley House—Barnegat Inlet, July 10th.*—J. Waugh & Co., 17 bluefish, 30 sea bass. July 11th, J. Waugh & Co., 7 bluefish, 15 blackfish and sea bass; E. P. Collis, 8 sheepshead; J. C. Mount, 19 bluefish, 11 sea bass; J. Soper, 11 sheepshead. July 12th, Waugh & Co., 33 bluefish; Gen. B. F. Fisher, 11 bluefish and 18 sea bass. Some 50 sheepshead by the professionals. July 13th, Gen. B. F. Fisher, of Phila., 27 bluefish, 27 sea bass and blackfish; J. Waugh & Co., 22 bluefish. July 14th, some few bluefish taken. No wind. July 15th, General B. F. Fisher, 4 sheepshead, and some 75 by the professionals. Light wind during the entire week, and fishing as a general average poor. B:

CONNECTICUT.—*New Haven, July 14th.*—Another fine salmon weighing nine pounds has been taken at Higganum, on the Connecticut. Black bass have been largely introduced into our waters, and are doing finely; streams which formerly swarmed with dace and the smaller fish, have been almost entirely freed from them by the bass, which as a consequenee are very large and strong. Striped bass although plentiful in the rivers and creeks, do not as yet take the hook freely; whether the recent showers will have any effect on them or not, remains to be seen. R. T. M.

Bridgeport, July 17th.—Some very fine strings of black bass were taken from the Housatonic, near New Milford, last week. One party captured 21 fish weighing twenty-five pounds, and a young lad had the good fortune to hook and save one weighing six and three quarter pounds. I shall try my luck soon, and acquaint you with the result. Our harbor is full of very small bluefish. HUNTINGTON.

VIRGINIA.—*Leesburg, July 15th.*—The Potomac, Goose Creek, and smaller tributaries are as yellow as gold. Hundreds of dead fish (common suckers) are floating and stranded along the shore. Their stench is very disagreeable. They were killed by alternate rises and falls in the river, being left in stagnant pools, and then by next high water washed out. There has been no good fishing in June for more than one day. First black bass taken with fly was on June first. Two gentlemen on Goose Creek took 25 about last of June, but have had no good day since. I took with a line 10 tront in latter part of June, weighing about 6 pounds, most of them quite 12 inches in length. The dead fish seem to have affected the appetite of the bass, which have not bitten well even when the water was in good condition as to clearness. I have taken with the fly since June 1st about 50 fish, mostly black bass with sprinkling of silver chub (fall fish). We don't expect clear water until the last of this month, July. Several parties have left town on angling expeditions prepared to rough it. One party of ten went to Shannondale, on the Shenandoah. T. W.

IOWA.—A correspondent writes us that last summer he had excellent sport with pickerel in Lake Okoboji, near Spirit Lake, using frogs for bait. One fish was a foot and a half in length, the flesh firm and in good table condition.

TEXAS.—*Gainesville, July 8th.*—On June 16th a party of us went to Spring Co., some eight miles distant to fish, and two hooks took some twenty pounds of black bass (trout) and rock bass (?); during the night several "cats" were caught. R.

HERRING FOR SWEDEN.—She schooner Setagawa, Capt. Guptill, cleared at Gloucester on Saturday, with a load of herring, for Gottenberg, Sweden. This is the sixth cargo of this fish shipped by Gloucester parties to that distant market the present season, which gives the enterprise considerable importance as a new venture, and if the business proves a profitable one it will doubtless be extensively pursued another year. When the first cargo was sent it seemed like sending coals to Newcastle, but proved very profitable.

FISHING MOVEMENTS.—The number of fishing arrivals reported the past week has been 70—38 from Georges, 23 from mackereling trips to the eastward, and 9 from Bank trips. The receipts for the week have been about 800,000 pounds codfish, 270,000 pounds of halibut, and 6,500 bbls. of mackerel. The extreme hot weather makes the curing of cod a matter of difficulty, and has a tendency to soften the mackerel. The latter find a ready sale, however, as fast as landed, and there are none upon the market. Codfish are in moderate demand, and prices well sustained.—*Cape Ann Advertiser, July 14th.*

TROUTING—TWIN LAKES, ETC.

July, 1876.

EDITOR FOREST AND STREAM:—

Taking advantage of the the last day the law allows to trouters in this Nutmeg State (June 30th) and the disadvantage of a hot, still morning, we essayed a flying visit to the land of Canaan—no longer the "happy land," since it flows, not with milk and honey alone, but nicotine and whisky—and dropped a "coachman" or two into Roaring Brook, and soon whipped out enough of the *Salmo fontinalis*, with their star-begemmed sides and striped fins to tell us that trout were still there, and that the Fourth was not far off. A "white-ash breeze" soon brought us from our trout farm to the station, and the Conn. Western Railroad presently dumped us at the West Norfolk Station, past which flows as pretty a trout stream as need be seen on a spring day, but which in summer is a mere rill, as the dry time comes on. Giving it the go-by for the season and following down the highway that skirts its sides to where it enters the Blackberry River (once a famous trout stream till the tan liquor from Sheppard's tannery spoiled it) and cross lots through a wilderness of laorels (ivy, in common parlance,) gorgeous with blossome just at this time, through tempting patches of wild strawberries and young wintergreens to the Roaring Brook, once so celebrated as a trout stream, now, alas! nearly de-*trout*-cated by the ever-destructive pot fishers, and the still more destructive charcoal fiends, who

"Hewed the dark old woods away,
And gave the virgin streams to the day,"

thus drying the spring and making hot havoc with the cold shady waters that once made glad their channels. Time was when to catch a big string of trout out of a "good hole" was no trick at all, even to a farmer boy; but now, if the expert angler gets even a dozen out of a mile of careful angling, he has extraordinary luck. As for the trout, they are not there, and can only be got there again by letting the shade grow, and by filling the channel with brush for a year or two, or by artificial re-stocking, or all three combined. So woke up, ye Norfolk Game and Fish Protective Society, and see what can be done for this and other brooks that once made your old tip-top town the Eden of anglers. As for our catch for the day, fourteen, averaging seven inches, was all that were kept, for I keep nothing less than six inches long, unless it is killed in the unhooking, and this over about a mile of available fly-casting stream. Dismissing Roaring Brook till another season we made our way home via East Canaan street, stopping at every cold spring or well by the way to change the water in our pail of trout, and arriving at Twin Lakes Station, whence a rapid row of a couple of miles brought us to our trout farm once more, with the trout all alive, where the fresh spring water gave new life to the beauties without knocking the spots out of a single one, which is more than good luck—good management—which is the grand secret of trout raising, whether out on a "fly" or off with the umbilical sack just used up.

Before closing I may as well add that the camping out season has opened with the usual unthusiasm, spite of the Centennial attractions and hard times; and numerous parties of squatter sovereigns have occupied "the island" from time to time since the coming in of June, and since the law is off on bass fishing July 1st, all may catch who can and what they can. J. I. P.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

T. D. East Boston.—Will you please inform me through your columns how late the fishing season lasts at Rangeley Lakes and greatly oblige a reader? Ans. Until October 1st.

F. H. P., New York.—Do you know anything about a gun maker in New York named John Mullin? Are his guns trustworthy? Ans. John Mullin, gun maker, is dead. His guns are first class.

J., New York.—Is there any place in this city where they buy second-hand rifles, guns, etc? Ans. Try H. C. Squires, No. 1 Courtland St., or Homer Fisher, at No. 220 Broadway.

X. Y. Z., Swampscott, Mass.—How is bird lime made? Ans. By boiling the best imported linseed oil until it is the consistency of molasses candy. Your report came too late for this week's paper.

D. McG., Harrieville, Mich.—About what time in September will the International rifle matches take place? Ans. Tuesday, the 12th September, was the date named. Should any change occur it will be noted in these columns.

BIL, Boston.—Can you inform me how to get to Megantic Lake, Province of Quebec? At what part of the lake can I obtain men and boats? Do you know of any party of whom I can engage them by letter? Ans. Have sent you paper with information.

HELLEM, York, Pa.—Does Theophilus Marcot, of No. 68 Haymarket, London, C. W., make good and trustworthy guns? How does his work compare with the best makers in London? Ans. The Marcot guns compare favorable with the best London makers.

P. G., Milburn, N. J.—Will you kindly tell me, 1st, What fish can be caught in Greenwood Lake? and 2d, What description of rod and other tackle would you advise me to take? Ans. Black bass, perch, etc. Take light bass rod, etc., and flies such as can be found at any dealers.

F. N. B., Newton Centre.—Can you tell me where I can get a dog muzzle that, I think, was advertised in your paper last season? I believe it was recommended by Bergh. It was a wire frame; a dog could open his mouth but could not bite. Ans. From Messrs. W. F. & J. Meserau, No. 52 Duane street.

A.—Is the trout fishing good in the Rangeley Lake region from August 1st to 15th? To which would you advise one desiring two weeks' trouting to go, the Rangeley Lakes or Nova Scotia? If to the latter place would you prefer the region west of Halifax, about Chester, or the locality of Truro? Ans. Yes, but much better in September. We should recommend Rangeley.

SUBURB, Brooklyn.—1. Where can excellent trout fishing be had during the month of August? Should like to board at some farm house or cheap place on or near a trout stream. 2. What is the cost of board at Moosehead Lake? Ans. 1. We doubt if you will find "excellent" trout fishing nearer than Maine or Canada. 2. $1.50 to $2 per day.

H. J. T., Boston.—Can you tell me of any book that treats of the birds of the coast of New England, the sea fowl more especially? Ans. Samuel's "Birds of New England" (to be had anywhere) comes nearer to your want than anything else, except the many local lists and monographs of Eastern birds published by scientific societies, which you can find at the libraries.

O. FANCRAM, N. Y.—I see in your FOREST AND STREAM of July 13th, in reply to "Scales," in Correspondents' column, you say "close season for trout commences July 1st." Do you mean for this State? as *Fur, Fin and Feather* says not until September 15th. 2. When will the Kennel Stud Book be out? Ans. 1. The reply referred to the State of Connecticut: the printers neglected to set the address of the person making the inquiry. 2. We anticipate printing it at the end of the year.

NED, Latrobe.—My setter dog has been sick for some four or five days, will not eat, lies on the ground on his belly, tries to find the coolest place, belly hard and hot, pulse about 90, vomits a great deal, can get nothing to lie on his stomach. Do you think he has worms, or what do you think the trouble is, and what remedy should I apply? Ans. Your setter evidently has worms, and we have mailed to you some arecea nut with directions for its use.

D. B. H., New London, Conn.—I have a setter dog three years old that has canker in his ear. I have given him Mayhew's remedy for the past nine weeks. He improves, but very slowly. Please inform me of some remedy you think will make a quicker cure, and oblige. Ans. Dissolve 30 grains of sulphate of copper in 8 ounces of water. After washing the ears well with castile soap and water, pour in some of the liquid twice a day for three days. Feed no meat until a cure is effected.

C. C., Philadelphia.—Can you inform us of a suitable camping ground at or near the Delaware Water Gap? We intend starting about the 20th of August and staying four weeks. What kind of game would we be likely to find in that neighborhood? Ans. Take Delaware, Lackawana and Western Railroad to Henryville, and camp on Broadhead Creek. Good ruffed grouse shooting after September 1st and some woodcock.

J. C., Grouse's Point.—1. Can you tell me if there is any law against shooting yellow legs, plovers, and any of the small kinds of snipe, and if any, at what time can we shoot them, both in this State and in Canada? 2. What is the price of the Frank Wesson model Creedmoor rifle? 3. Is Manning's Yachting Circular for June published yet? I sent for a copy and have not received it yet. Ans. 1. No law in this State or Canada. 2. About $40; depends upon extra attachments. 3. Not out yet.

C. S. R., Niagara Falls.—Have the supervisors of a county any right to change the State law in relation to woodcock? They have passed a law prohibiting the shooting of woodcock until September in this county, and the shootists are indignant. Ans. We think that any local enactment which abrogates any provision of the State law is illegal and void. The act reads: "It shall be lawful for the Boards of Supervisors of any county to make any regulations protecting *other* birds, fish, or game than those mentioned in this act;" but we can find nothing which gives them power to alter or amend the acts of the Legislature.

H. J. T., New Bedford.—I have a "Norfolk" spaniel, five years old. Last Saturday, she had a series of fits, running round the house and yard yelling, panting and vomiting. I think it was caused by the heat. I took her in the yard and bathed her head in cold water, she also during the day and night drank copiously of cold water; to-day she seems quite bright. What shall I give her in the shape of medicine? Ans. Have mailed some medicine for your spaniel, besides which in case she shall have any more fits, give her 10 grains of bromide of potasium three times a day, and apply ice or ice water to her head.

W. E. C., Buffalo.—1. What is the best preventive against the attacks of punkies, mosquitoes, etc? I expect in a few days to go into the woods after trout; having heretofore been troubled very greatly should be pleased to hear of something affording relief? Can you also inform me what is the best method of straightening crooked tips? Ans. 1. A mixture of oil of tar and pennyroyal prepared by any druggist is generally used, but perhaps the following is a better recipe: Essence oil verbena one drachm; cologoe spirits, (not cologne water) ninety-five per cent., one pint; mix and agitate for twenty-four hours; then add distilled water four ounces and filter. Bathe the face, neck, and hands well and the mosquitoes will not trouble you.

W. E. C., New York.—On the 14th prox. it is my intention to go to Lake George. If I do so I will put up at the Fourteen Mile Island. Will it be asking too much to inform me if the fishing is good there, the kind of fish caught and the outfit necessary; also what character? Will there be any ducks there as early as the middle of August? Ans. You will find black bass, pickerel, perch, etc., although in what quantities we cannot say. For outfit take bass rod and flies, also trolling gear (spoons and artificial minnow.) No shooting until after Sept. 1, when you will find some ruffed grouse. Duck shooting is allowed at the same date but it will be much later in the season before it amounts to any thing.

N. C., Buffalo, N. Y.—I notice in your last issue an account of some of the fine dogs owned by the members of the Greenville Sportsman's Club; among them is G. Hobaugh's Gordon setter, Shott. I purchased a red setter pup two months old from a gentleman in Erie, Penn. He represented him to me as being an Irish setter bred by G. Hubaugh's Shott, and Shott by an imported Irish setter, Staunch, now owned in Pittsburgh. Do you know anything of the above-mentioned dogs? Ans. We do not know the dogs you allude to, but by addressing Mr. G. Hobaugh you can get the information you desire.

L. S., Philadelphia.—Will you please explain how it is that at the Centennial Beech Show for dogs there is no native setter or pointer class? It seems that we are doing ourselves a great injustice by not allowing our dogs, which are fully as good, if not better, than English blood, to compete for the premiums. Ans. You are in error. By referring to our issue of July 6th you will see that Division B, Class 10; Division C, Class 12; Division D, Class 14; and in Division E, Classes 16 and 17, are all for native setters and pointers. Your mistake arises from the fact of the absurd custom of adding the word "English" after native having been adopted. There would be as much sense in calling Lexington a native English horse because his ancestors were imported.

F. G. S., Westfield.—1. Will you please inform me at what age a bitch is too old to use for breeding purposes? I have a spaniel bitch nine years old and very fleshy. Less week she had one pup, which died. Did old age or excess of flesh have anything to do with her ill luck? 2. Do you think a setter or a pointer superior to a spaniel for grouse hunting? Ans. 1. We have known bitches to breed good pups at twelve years of age, but such instances are rare. One nine years old should breed, if not too fat; but that is generally the difficulty. They get too fat to breed when they become aged. 2. We prefer the setter or pointer for ruffed grouse shooting, yet well-broken spaniels in some sections of the country are exceedingly good dogs for the purpose.

IMPORTANT.—Care should be taken, in buying Fishing or Hunting Suits, to get a genuine Holabird Suit, and not one of the worthless imitations which are being put on the market. The best is the cheapest.—Adv.

—General Garfield has introduced into Congress a joint resolution, which it is hoped may pass, directing the Secretary of State to cause to be compiled and published a brief history of all the surveys and scientific expeditions, naval and on land, authorized by the Government during the century just closed. The volume is to contain not more than 850 octavo pages, and the sum appropriated for the publication is only $7,400. Such a book, well done, would be of extreme interest.

FOREST AND STREAM

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,

[POST OFFICE BOX 2832.]

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty-five per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, JULY 20, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,
Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, July 20th.—Trotting: Columbus, O.; Chicago, Ill. College Athletic Sports: Saratoga. Base Ball: Boston vs. Mutual, at Brooklyn; Louisville vs Chicago, at Chicago; Cincinnati vs. St. Louis, at St. Louis; Quickstep vs. Alert, at Hoboken; Hartford vs. Allegheny, at Allegheny; Our Boys vs. Goodwill, at Brooklyn; Manhattanville vs. Olympic, at Paterson; Hudson vs. Keystone, Brooklyn.

FRIDAY, July 21st.—Trotting as above. College Athletic Sports at Saratoga. Base Ball: Chelsea vs. Arlington, at Brooklyn; Enterprise vs. Alien, at Jersey City; Quickstep vs. Alpha, at Harlem.

SATURDAY, July 22d.—Quincy Yacht Club Regatta. Creedmoor: Geiger Bullseye Badge and Schuyler, Hartley, & Graham prize. Base Ball: Louisville vs. Chicago, at Chicago; Cincinnati vs. St. Louis, at St. Louis: Athletic vs. New Haven, at Philadelphia; Quickstep vs. Baxter, at New York; Nameless vs. Osceola, at Brooklyn; Chatham vs. Orange, at Orange, N. J.; Athletic vs. Lafayette, at Brooklyn; Crescent vs. Stationers, at Philadelphia; Our Boys vs. Chelsea, at Brooklyn; Madison vs. Hudson, at Brooklyn; Putnam vs. Eureka, at Brooklyn; Oneida vs. Lafayette, at Brooklyn; Eckford vs. Oxford, at Brooklyn; Winona vs. Staten Island, at Brooklyn.

MONDAY, July 24th.—Brenton Rifle Challenge Cup race from Newport. Fifth Brigade Infantry practice at Creedmoor. Base Ball: Quickstep vs. Our Boys, at Brooklyn; Athletic vs. New Haven, at Philadelphia.

TUESDAY, July 25th.—Trotting: Gettysburg, Pa.; Cleveland, Ohio; Syracuse, Ill. Regatta Friendship Boat Club, Glenwood Grove, L. I. Base Ball: Cincinnati vs Chicago, at Chicago; Louisville vs St. Louis, at St. Louis; Mutual vs. Witoks, at Brooklyn; Enterprise vs. Jackson, at Elizabeth, N. J.

WEDNESDAY, July 26th.—Trotting as above. Base Ball: Resolute vs. Lafayette, at Brooklyn; Quickstep, vs. Hague, at New York.

FUR, FIN AND FEATHER.—Mr. Chas. Suydam has just issued an edition of his valuable work, which contains all the latest amendments to the game laws of this and other States. It is a book which the sportsman cannot afford to be without, and the value of which, as a reference guide, will be constantly appreciated.

—All persons interested in the protection of fish in Greenwood Lake, and continued re-stocking of the lake with fish, are invited to meet at the Brandon House, head of the lake, for the purpose of forming an association in this interest, on Saturday, July 22d, at 8 o'clock, P. M. Persons desiring to join but unable to attend, are invited to address Wm. O. McDowell, Secretary, Room 6, 119 Broadway.

—The yacht Countess of Dufferin arrived at this port on Monday evening, and anchored off Governor's Island. We suppose that dates for the matches for the America cup will soon be named.

EDITORIAL RAMBLES THROUGH CANADA.

ALEXANDRIA BAY,
RIVER ST. LAWRENCE, July 13.

EDITOR FOREST AND STREAM:—Since the universal purification of the superheated atmosphere by thunder storms on Tuesday last, I presume that all the sojourners at the watering places are congratulating themselves, and commiserating the dwellers in close cities. It is so here; it was so at Saratoga, and so at Sharon Springs. However, my inference is that, as the rain is made to fall, and the sun to shine, upon the just and unjust alike, so all have experienced in some degree the relief so much needed; the inflictions of the heated term have been tempered as much to the plucked pigeons of the Centennial as to the shorn lamb on the rural hillside. Our joys and our miseries become great or little by comparison with other people's, even to the extent that two degrees of favorable temperature, at Gelston's in your city, excites the sympathy of its habitues for those who swelter around Hudnut's, making the one set complacent and comfortable, and provoking the envy and perspiration of the other. One thing is certain, there are only two roads of escape from the fervid heats of midsummer—one by way of the mountains, where high altitudes lift us above the torrid stratum; and the other by the sea, where perpetual breezes modify the solar rays and shiver the window shades into strips. At most inland resorts there is but trifling variation of temperature, and the only advantage these have over the cities is a freer circulation of air, with less absorption and evolution of heat by brick walls and stony pavements.

Alexandria Bay, though not elevated, is blessed by the prevailing southerly breezes that sweep over the whole breadth of Lake Ontario and this part of the St. Lawrence River, thereby securing an immunity from heat that few inland places do. This special benefaction no doubt helps to fill its hotels when other resorts are starving for patronage. The Crossman House has a record that antidates railroad travel; the fame and popularity of its veteran proprietor unquestionably goes a good way toward making up his annual complement of guests.

Old Dr. Bethune used to fish here, Silas Wright, De Witt Clinton—honored men of that ilk—Governor Seward, and I dare say Martin Van Buren occasionally used to spit on his bait and trust to luck for a bite. Succeeding generations like to tread in the footsteps of their illustrious predecessors, to fish in the same waters, and be served by the son of the father who catered to the old set. Moreover, the Thousand Islands possess peculiar charms of their own, not only for anglers, pure and simple, but for persons who become sufficiently enamored therewith to make them their habitual summer resort. Every other large island hugs a little cottage to its bosom, and the dazzling hues of the stars and stripes shine resplendently against their background of green foliage. The bay is also on the principal highway from the States to Canada, and being quite on the boundary line, becomes an objective point to numerous picnic parties from both sides, far and near, which add considerable to the receipts of the season. There are reasons enough why this should be one of the preferred places, and why those who came here thirty years ago, still continue to come, and now bring their grandchildren; but one of the reasons most potent to attract the floating crowd of pleasure seekers just at this time, is the very reasonable price of board at both hotels. The Crossman House charges $2.50, and the Thousand Island House $3, the extra fifty cents going to pay for glitter and gimcracks. At either hotel one can obtain five times the amount of comfort and variety of entertainment that he can at Saratoga, for half the money. There is not the slightest doubt that the half-empty hotels of the leading watering places owe their present condition of beggarly emptiness to excessive charges. People cannot afford to pay high prices nowadays, and nine-tenths would gladly forego the frescoes, plush, and French table flummery for simpler rates and simpler fares. Impecuniosity and slender purses compel men to adopt simpler habits, and the number who can afford luxuries is not now sufficient to make the grand hotels pay.

Probably there is no other location in the States which offers so many attractions at so low rates as Alexandria Bay. Since the 12th the influx of visitors has been large, and there is every evidence that both the Crossman and the Thousand Island House will make a good harvest, notwithstanding the season will close by the middle of September. There is a natural rivalry between the two hostelries which ensures to the advantage of their guests, but there ought to be patronage enough to satisfy and compensate both. It will be a comfort to travelers to know that in making their selection between them, they can make no mistake, while the proprietors of each can console themselves that there is no ground room here for a third competitor. I am moved to urge people to visit Alexandria Bay solely because I candidly believe they can get the most for their money; and I wish also to encourage low hotel fares.

I do not wish to imply that Alexandria Bay is crowded with guests, for there is room for as many more as are now here, and rooms are now waiting for occupants that probably will not come. Only a few of the island cottages are occupied as yet. Sheriff Williams, of Brooklyn, is at Nobby Island, Mr. Hasbrouck, of New York, occupies Manhattan Island, and flags wave from the islands tenanted by Mr. Anthony, of New York, Warner, of Rochester, Fredericks, of Carthage, and Hume, of Charleston. Idlewild Island will also be occupied to-morrow. The Crossman House, at least under its economical management and its regular line of boarders who annually come and go with the heat, will maintain itself; and that is all that any proprietor can expect. They say that the Centennial keeps away a great many; but the Philadelphians in turn complain of vacant accommodations. Where then are the people? The Albany boat that I left New York on was overcrowded, but every other line of conveyance that I have traveled on was not half filled. St. Lawrence River travel, especially, is very light. There are several members of the Cuvier Club, of Cincinnati here, including its Vice-president, Mr. Beasley, who devote themselves to angling. Yesterday one boat brought in two dozen very excellent black bass. Two very large mascalonge have been taken this season, one weighing 30 lbs., by Mr. Hume. Judge Clinton, of Buffalo, arrived to-day with his family. He is ardently interested in the protection of game, and has done much to influence proper legislative enactments. He is the son of De Witt Clinton, who had the honor of entertaining General La Fayette when in this country.

The St. Lawrence has this year experienced a most unusual and unexpected rise of four feet above ordinary high water mark. Consequently many low islands are submerged, and in some instances considerable damage has been done to occupants who had not calculated for a flood.

The little excursion steamers of Mr. Starr prove a great convenience, while his pavilion for the sale of ice cream and other refreshments is much patronized by picnic parties from both sides of the river.

I have heard of some good bunches of woodcock being taken just across the river in Canada. There is a good piece of ground over there, which is known to the resident gunners here.

Weather hot to-day, but a fine breeze blowing.

MONTREAL, July 15th.

The boats down the St. Lawrence now bring 150 persons the trip, and frequently more. State-rooms should be engaged in advance; and none should fail to purchase through tickets when practicable. The Montreal hotels are doing the best business of any I've seen yet, but are by no means crowded. Lots of passengers *en route* with trout and bass rods, I have seen no salmon rods except my own. Saw a few ducks on the river yesterday, but no flappers. Several Southerners and many Cubans or Spaniards on the way.

HAL.

DR HAYDEN AND ORNITHOLOGY.

THE Secretary of the Interior lately applied to the Secretary of War to have Dr. Elliott Coues, U. S. A., detailed for duty with Dr. Hayden on the United States Gelogical Survey of the Territories. The necessary order was issued on July 3d and consequently this distinguished ornithologist will soon take the field with the Survey, which, during the short season remaining, will finish up the mapping of southern Colorado. Dr. Coues writes us that it is probable Dr. J. Kidder, who has lately made much credit for himself as naturalist of the Transit of Venus expedition to Kerguelen Island, will also accompany the Survey. With these two gentlemen added to his staff, Dr. Hayden's report for 1876 ought to be replete with interest to the naturalist. How much this admirable Survey has done towards adding to our knowledge of the animal life of the West is not appreciated by everyone. From the time when Dr. Hayden and James Stevenson in 1867 explored Nebraska in an army ambulance, this organization has been a constant source of supply to our museums, and afforded a constant opportunity to collectors to visit distant regions in safety. The results are counted in thousands of specimens, and in thousands of printed pages of original information. At first (leaving geology and palæontology out of the question now) insects, plants and birds occupied chief attention. Stevenson, Thomas, Carrington, Allen, Coulter, and Cope, were among Dr. Hayden's earliest collectors. Then the parties were known among the Mormons as "bug hunters." As the Survey increased in extent and means enlarged facilities were given, and the material collected began to be worked up by prominent authors at Washington and in the East, and to be published in those magnificent volumes which excite the admiration of the scientific world. But collecting was still kept up. In 1873 C. Hart Merriam gathered a large quantity of skins of mammals and birds, and bird's nests and eggs. In 1873 Lieut. Carpenter made a splendid collection of butterflies and moths, and J. H. Batty worked indefatigably in obtaining the skins, skeletons, and horns of mammals, and skins of birds. Many fishes, reptiles, and worms were also secured during these years. In 1874 E. A. Barber and Ernest Ingersoll brought back a good-sized list of land and fresh-water shells and some other invertebrates. All these collections, except Batty's, have been fully and promptly reported upon to the great advantage of every working naturalist. In 1875 nothing of consequence in natural history was preserved, the attention of all being turned toward ethnology. It is therefore an occasion for congratulation that zoology is to be well looked after this year.

It is to be presumed that Drs. Coues and Kidder will devote their energies mainly to mammals and birds; but it is also to be expected that they will not content themselves with merely bringing home their skins and measurements. We want to know the social life and habits and personal characteristics, so to speak, of the denizens of the Colorado Mountains and valleys. It is an unfortunate time of the year to see the birds at their best,—the weather is warm,

the activity and joy of their nuptial season has abated, their first songs are hushed, their brightest feathers faded; yet their life is full of incidents which a patient and loving watcher can interpret; and one new glimpse of the rare and beautiful Spirit which resides in the breast of a bird would be worth the addition of a dozen skins to our crowded museums. Let us have from Dr. Coues (for no one is better able to begin this new departure) more of the life of the birds of the Rocky Mountains, and less of their death.

OUR CENTENNIAL LETTERS—NO. 7.

SHOT GUNS AND RIFLES.

In our last letter which was descriptive of the English exhibit of guns, we unintentionally omitted mention of that of Messrs. Williams & Powell, of Liverpool, one of the oldest established houses in the United Kingdom. The omission was probably owing to the fact that their case is not only at the end of the row, but the guns are laid horizontally in it, instead of in a more prominent perpendicular position. The guns of Messrs. Williams & Powell are rapidly becoming favorably known in this country. A member of the firm has recently traveled extensively throughout the Union. Their latest novelty is a patent "Simplex" action, with an independent extractor. It is claimed for this new action, that, having but two parts, the lever and grip being one solid piece of steel, it possesses the minimum of simplicity with the maximum of strength and durability. Some of our leading sportsmen are now using these guns and all speak well of them.

It is to be regretted that American manufacturers of shot guns have not made more of a display at the great Exhibition; there are in reality but three makers represented, the Messrs. Remington, Parker, and J. Stevens & Co. There are sufficient manufacturers scattered throughout the country to have made a display equal in numbers and perhaps almost in quality with the English exhibit. We should like to see a case of fine Lefever guns, or those of some of the well known western makers, or a few specimens of Mullin's handiwork exhibited in the same attractive manner. The honors would not all be with our visitors. The guns of the first two mentioned firms, Messrs. Remington and Parker, are too well known throughout the length and breadth of the land to require a detailed description. The object of each firm is to provide a good gun at a low figure, while the man with a longer pocket can find one at almost any price. The Remington guns are made under the Whitmore patents, the breech action being worked with a top lever which is pressed upward with the thumb, withdrawing the locking bolt, swinging up the rear end of the barrels and half-cocking the hammers. There are three grades of these guns made, the price being $45 for decarbonized steel barrels, and $60 and $75 for the better qualities with twist barrels. The Parker gun has the lever action in front of the trigger and are made for all prices from $45 to $300.

The Stevens gun is something new, being scarcely ready to put on the market. They are made at Chicopee Falls, Mass., under the immediate supervision of Mr. Stevens, who is himself a first class mechanic, in proof of which we would mention that he has been recently appointed to superintend the manufacturing of a set of gun-making machinery, such as is used at Springfield, for the Enfield Armory in England. The breech action of the Stevens guns is a single grip loosened by a third trigger in front of the trigger guard. They are made in two qualities, the first, with twist barrels at $40, and the second, laminated steel at $60. The guns present a very neat and serviceable appearance.

RIFLES.

As a display, that of Messrs. E. Remington & Sons is probably the most attractive and artistic in the Exhibition. The space occupied is larger than that of any other exhibitor, and a great deal of taste has been displayed in its arrangement. The rifles are arranged against a black background and the whole surmounted with the firm name in letters composed entirely of pistols. With regard to the rifles themselves we scarcely know what we can say that is not already known to every reader of FOREST AND STREAM. Aside from the great reputation attained by the military arm turned out at the Ilion factory, the great accuracy of their rifles at long ranges and their very extensive use in all long range shooting has made the name a household word the world over.

The Sharp's Rifle Co., which has adopted the trade mark "Old Reliable," the *soubriquet* of Col. Bodine, exhibits a handsome case of rifles, military, match, and sporting. It is astonishing how long the Sharp's system has remained without material alteration or even improvement; the latter perhaps being unnecessary. The invention, which it is claimed was the first successful one of the breech-loading system, was brought out first in 1848, and the manufacture was progressing on a large and successful scale in 1851. The solid breech block has many excellent features, and the fact that so much of the original invention has stood the test of time, is commendation in itself. The Sharp's Rifle Company has recently reorganized with an authorized capital of one million dollars and has established a large factory at Bridgeport, Conn.

A very handsome display is that of the Winchester Repeating Arms Co., of New Haven, Conn. One needs to go on the plains or to California to see the esteem in which these rifles are held. In California alone the sale must have been enormous in the last two years. Almost every hunter one meets has a "Henry" or a Winchester, and now as the patents are in possession of the one company they are all Winchesters. It is claimed that there are two hundred thousand now in use in all parts of the world. Rapidity of firing, with the ammunition carried in a convenient form, is a great attraction, and although we question whether any repeating rifle will ever come into general military use, they will always be favorites with hunters. In accuracy, for short and even mid-range shooting the Winchester takes a high position. It is an excellent gun for the plains, where one's game may be a jack-rabbit one minute and a deer the next. Mr. A. Burgess, of Owego, N. Y., has invented, and has on exhibition, a repeating or magazine rifle, which outwardly resembles the Winchester somewhat, but, it is claimed by the exhibitor, is essentially different, having fewer parts and taking a larger cartridge, or one of different length and charge. The most striking difference is in the hammer, which is of the ordinary form and can be used independently. Mr. Burgess claims that for rapidity, force and accuracy combined, it is far superior to any other arm now in use. They are not yet being manufactured. The only other magazine rifle on exhibition, of which we have cognizance, with the exception of a case of the Ward-Burton guns, which there was no one to exhibit, is the "Evans," in which the magazine, carrying thirty-four rounds of 44-calibre cartridge, is in the stock. What the effect is of having all this weight at the stock, we can not say, as we have not seen the piece loaded. It might lessen the recoil, but we should imagine somewhat at the the expense of accuracy, as the tendency of the muzzle would be to rise at the discharge.

The Whitney Arms Co. send from their factory at Whitneyville, near New Haven, a fine collection of their rifles. The Whitney resembles the Remington very much, the same or nearly the same action being used. They have not been very long on the market, but are becoming very popular as a remarkably handy rifle, particularly for sporting purposes. Messrs. Schoverling & Daly, of this city, who have come into possession of the Ballard patents and are now manufacturing on a large scale, exhibit a case of these favorite arms, with all the latest improvements in the way of independent extractors, etc. The Ballard has been so long before the public that its merits are well known. The short range, 22-calibre, is in use in almost every shooting gallery in the country, and as a sporting gun it is excellent. Messrs. Schoverling & Daly are now making them of all sizes and grades up to the Creedmoor long-range.

The Providence Tool Company have a very handsome case in which are exhibited the Peabody-Martini rifles, manufactured by them. The system of rifling used in the manufacture of these rifles is that adopted by the Arms Commission of the British Government after long and exhaustive experiments. Our principal objection to it would be the fact that thorough cleaning of the barrel after such discharge is necessary to insure perfect shooting. It is claimed that this rifle has a lower trajectory than any in use. Some of our long range experts are using them. Mr. Frank Wesson exhibits a case of the rifles manufactured by him at Worcester, Mass. We have no opportunity of examining the guns, but know that they are held in high esteem by New England riflemen. Messrs. Jacob Harder & Son, of Lock Haven, are not yet convinced that the breech-loading rifle of modern times is at all the weapon for sporting purposes which it should be, and they therefore continue the manufacture of the old fashion long stocked Kentucky rifle, some with a second barrel for shot below the first, and ramrod on the side. We have no doubt that they find a ready market in their locality among the old fashioned people who are still voting for General Jackson, but among the cases of elegant breech-loaders their rifles appear as foils, to show to what point we have advanced.

—

MR. DOUGALL'S GUNS.

59 ST. JAMES'S STREET,
LONDON, July 4th, 1876.

EDITOR FOREST AND STREAM:—

I beg to thank you for the very kind notice that you give my case of guns exhibited at Philadelphia, but probably through your not having an opportunity of handling them you report upon my "Lockfast" guns only. This naturally will lead to the impression that I confine myself to the manufacture of lockfasts only. I exhibit the most improved forms of snap and other breech-loaders, and manufacture these in every form and action, in accordance with orders, having no prejudices of my own and turning out every variety with the same care and fidelity. I beg the insertion of this letter therefore, in your widely spread columns, to explain what may otherwise be very injurious to the interest of your obedient servant

J. D. DOUGALL,
Gunmaker by special appointment to H. R. H. the Prince of Wales.

INDIAN ARMS.—The traditional Indian was armed with the bow and arrow, but the modern savage is not satisfied with anything but the latest model of rifle and revolver. Even the regulation piece with which Uncle Samuel arms his soldiers and sends them to the frontier is looked upon with contempt by the "untutored red man," and nothing less than a long-range Creedmoor rifle satisfies his ambition. The correspondent of the *Times*, in a letter describing General Crook's first fight with Sitting Bull's band, alludes significantly to the fact that, "behind a ledge of rocks at the last point contested for, we found nearly a peck of freshly fired cartridge shells. Many of them were of the pattern used in a celebrated sporting rifle, which is far superior to the Government arm." It would be interesting to know whence and from whom the Indians, and particularly a nation always at war, like the Sioux, procured these fire-arms. Cooper, if we mistake not, in one of his novels, describes a renegade Yankee in the Gulf who was supplying the Mexicans with powder with which to fight his countrymen, and who was ultimately "hoist with his own petard." Birmingham has the reputation of doing, or having done, a thriving business in supplying the African market with *fetishes*, and India with gods and goddesses; but either enterprise pales before that of the man who would supply savages with rifles and scalping-knives to be used against helpless women and children on the frontier.

Shot Gun and Rifle.

GAME NOW IN SEASON.

Woodcock, *Philohela minor.*
Black-bellied plover or ox-eye, *Squatarola helvetica.*
Ring plover, *Ægialitis semipalmatus.*
Stilt, or long-shanks, *Himantopus nigricollis.*
Red-breasted snipe or dowitcher, *Macrorhamphus griseus.*
Red-backed sandpiper, or ox-bird, *Tringa americana.*
Great marbled godwit, or marlin, *Limosa fedoa.*
Willet, *Totanus semipalmatus.*
Tattler, *Totanus melanoleucus.*
Yellow-shanks, *Totanus flavipes.*

"Bay-birds" generally, including various species of plover, sand-piper, snipe, curlew, oyster-catcher, surf-birds, phalaropes, avocets, etc., coming under the group *Limicolæ* or Shore Birds.

BAY BIRDS.—For the sportsman who longs to shoot in summer, but who finds that tramping through thick-grown swamps for woodcock in July, after the first few days of the season, is scarcely "the thing," there still remains bay bird shooting. Generally about the first of July the birds begin to fly, and we hear that at Good Ground, on Shinnecock Bay, where "Bill" Lane's house is the rendezvous of sportsmen, the birds have already appeared. We want, however, a good easterly storm, after which shooting all along the "south side" should be good. There are many worse things than reclining on a bunch of sweet meadow grass watching the decoys, while dowitchers, willetts, or black-breasted plover come flying in, singly or in wisps, to be "dropped" in good style, while the surf at our backs sounds a requiem.

CONNECTICUT—*New Haven, July 14th.*—Quail have not been more abundant in Connecticut for many years, and our sportsmen are looking forward to the opening of the shooting season with a great deal of interest. Partridges have raised full broods, the season having been favorable for them, but too dry for the woodcock, which have resorted to the immediate vicinity of streams. David Cowell, one of our crack shots, secured sixteen of the latter birds on Monday last; this is the largest bag which I have yet heard of this season. We are now having first-class dove shooting in the freshly cut rye stubble; the birds are in excellent condition, but very wild, although they are very little shot at; flying singly or in loose flocks they afford fine sport in the morning and evening flights. R. S. M.

PENNSYLVANIA—*Milford, July 14th.*—Woodcock shooting is extremely good in this vicinity. A party on Big Island, near Dingman's, got 26 in two days, and a party of amateurs gunning and fishing along the Sawkill and Sauvantine Brooks put up 27, but only got 8 birds. Pheasants (ruffed grouse) are legion. AMATEUR.

ILLINOIS—*Rochelle, July 10th.*—Prairie chickens are going to be very plenty here this season, so say our Grainger friends. J. L. S.

MINNESOTA—*Brainerd, July 15th.*—I have just returned from a trip to Bismarck, the western terminus of the Northern Pacific Railroad, and the "sign" for chickens, etc., is far beyond the average in past seasons. The weather has been very favorable; no heavy rain, hail storms, or prairie fires of any account, and the grouse have had a fair show for once. All along the line the young birds kept getting up all day. They were large enough to fly 80 or 100 yards, and the sight of them makes one long for the 15th of August, when the close season expires.

T. P. C.

PIGEON MATCHES.

TOURNAMENT AT ST. LOUIS.—A grand pigeon shooting tournament will be held on the grounds of the St. Louis Gun Club, beginning July 19th and continuing the three following days. The large sum of $2,625 in cash, divided into seven purses, together with a gold medal for the amateur championship of the world, will be shot for. The whole will be under the management of E. T. Martin, of Chicago, who supplies the birds. Further particulars can be had by addressing E. T. Martin, 43 Clark street, Chicago; C. M. Williams, St. Louis; or W. A. Albright, 229 N. Fourth street, St. Louis.

A CELEBRATED PIGEON SHOT.—Our readers may remember the name of Captain Aubrey Lisle Patton, who has so distinguished himself as a pigeon shot both in England and on the continent. The London *Sporting and Dramatic News* recently contained a sketch of him from which we condense. Captain Patton served in the British Army in New Zealand and India, in the latter country making large bags of big game.

"He acquired a taste for pigeon shooting from his brother, Captain Henry Bethune Patton, who was then, and is now, one of the best shots of the day. Captain Aubrey Patton fired his first shot at a pigeon from a trap in the early part of 1871, and little more need be said regarding the proficiency he so rapidly attained when we mention that in the same year he carried off the Grand International Cup at Baden Baden. Having had a long and exciting tie with his brother, they both killed nineteen in succession, and each failed in the twentieth round, and the elder was again unsuccessful with his twenty-fifth, leaving the younger to kill to win, which he did with a smart first. Since that time his career as a pigeon shot is too well known to dwell upon; suffice it to say that he has won in the five years' shooting more than any living man both in cups and money prizes, being in possession of fully $10,000 worth of silver cups, of which no less than ten are international cups, won either at Baden or Monte Carlo, besides many guns as prizes. But nothing that he or any other shot has ever done before comes up to his last performance at Monte Carlo, when he commenced by winning the Grand Poule d'Essai, and then, for the second time in succession, carried off the Grand Prix, a cup valued at $600, and $4,125 in money, without having a tie, though shooting against seventy-five other competitors, and last year eighty-four, among whom were the best representative shots of Europe. Captain Patton again showed his wonderful form in his match with the German Baron Ischtroky, at fifty birds each, for $2,000. The latter was second in the contest for the grand prize, and in this match received an advantage of one yard three inches from his opponent, who in the end won by one bird.

LAKE CITY, Minn., July 8th, 1876.

EDITOR FOREST AND STREAM:—

If you will allow the trespass on your columns, I will furnish you with the score made by members of the Lake Pepin Sportsmen's Club, July 4th. The prizes offered were a solid silver cup, presented by citizens of Lake City for first prize; a red cedar fly rod, presented by Mr. G. W. Lemley, for second prize; a silver cup, presented by members of club, for third prize, and an elegantly engraved tin cup for the poorest score. The birds were wild pigeons furnished by E. T. Martin, of Chicago, and the score shows some creditable shooting. Our club is in a flourishing condition, and the members propose having something to say about the protection of game and fish in this vicinity. The scores were as follows:—

Name.	Score.	Total.	Name.	Score.	Total.
S. B. Dilley	1 1 1 1 0 1 1 1 1	9	S. M. Emery	1 0 1 0 0 1 1 1 1	7
E. A. Patton	1 1 1 1 1 1 1 0 1	9	Dr. Baker	1 0 1 0 0 1 1 1 1 0	6
Chas. Wise	1 0 1 1 0 1 1 1 1	8	C. Schmnser	0 1 1 1 0 1 0 1 0	6
Dr. Townsend	*0 1 0 1 1 1 1 1 1	8	S. M. Simpson	0 0 0 1 1 1 1 0 1	6
Dr. Rogers	*0 1 1 1 0 1 1 1 1	8	C. Freeman	1 0 1 1 0 1 0 0 0	5

Tie on 8 at 26 yards.

Rogers 1 0 0 1 1 | Townsend 1 1 0 2
McCrodon 0 1 1 2 | H. Patton 0 1 1 2

McCroden and Townsend tied 5 times, the latter winning by 2 to 0.

Tie on 7 at 26 yards.

Smyth 1 1 0 1 1 4 | Emery 1 1 1 0 1 4

Smyth and Emery tied four times, Smyth winning by 3 to 2.

*Killed, but gun held in wrong position.

S. H. Dilley won the champion cup; E. L. Townsend second prize; C. W. Smyth third prize; and D. S. Crane the tin cup.

THE KAY CARTRIDGE.

PHILADELPHIA, June 28th, 1876.

EDITOR FOREST AND STREAM:—

In your issue of the 22d inst. Messrs. Allen B. Kay & Co. have taken exception to my communication entitled "Test of Kay Concontrators," published in a previous issue. I reply simply to correct inferences which they have drawn totally without warrent, and are calculated to mislead. I assure the gentlemen I had no desire to injure them, or unfairly decry their goods. The object of the communication was to give bald facts, well ascertained, for the information of fellow sportsmen—nothing more.

Messrs. Kay & Co., in their advertisement, claimed for their cartridges absolute certainty for close, hard shooting, and I was in hopes of being able to substitute them in my own shooting at long range for the costly ones furnished by Eley. I am not a novice, as perhaps the gentlemen will learn, and knew perfectly well what I was about. I tried them precisely as they should have been tried, and now repeat, with stress, the words of my communication: "There was no fault in the loading." The printed directions furnished with the cartridge says: "If a creaser is used the crease should be above the roll of the shot cartridge, and not directly against it," and this direction was properly followed. Of the twenty cartridges used not one of them was crushed in the slightest degree by the creasiags, and the gentlemen had no right to pervert this fact.

Their objection to the tests because the gun was not tried at the same time with loose shot, and the results published for comparison, I can conceive to be quite without force. The question to be solved was, whether the cartridges could he depended upon with absolute certainty for close, hard shooting, with an ordinary gun, irrespective of the gun's performance with loose shot. When I stated that the gun was a 12-bore, 7¼-lb. Scott & Sons' fine breech loader, not choked, that was enough; and so Messrs. Kay & Co., in truth, thought, for they say, "the fault could hardly be with the gon, for we all know that Scotts' makes are good," and they, as gunsmiths, ought to know. But for the information of the gentlemen I will state that the average performance of the gun with loose shot was quite or more than equal to its performance with their cartridges, except at the 100 yards range. At 65 yards, with 1 oz. of No. 6 shot, the average was 46 pellets in a 30-inch circle, while with the cartridges containing 1 1-16 oz. of shot of 7 number the averge was only 38. Tried with Eley's wire cartridges, B shot, at 100 yards, an average of 13 pellets was obtained in a 30-inch circle, against 7 with the Kay cartridge and No. 1 shot. Various other trials with the Eley cartridges were made, and in every instance resulted more in their favor and against the Kay. It would, therefore, seem proved beyond a question that the fault was not with the gun; and as it was not with the loading, or in holding the gun when fired, as before stated, where could the fault have been? I repeat, however, I wish to make no comments, but give bold facts only; it is yet to be ascertained whether or not breech-loading guns which deliver loose shot well give, one with another, very variable results with concentrating cartridges.

Messrs. Kay & Co. ask "How does Old Sportsman manage to get twenty cartridges of 1 1-16 oz. each out of the pound he bought?" I bought not a pound of the word written was *parcel*, and it was doubtless so read by all intelligent readers. Their strength to make capital out of a very unimportant misprint is plain enough. But it is wholly nonecessary for me to say more in reply; the advice and animus of the gentlemen are unworthy of notice.

OLD SPORTSMAN.

CREEDMOOR.—Two matches were shot at Creedmoor on Saturday last, the first being for the Hepburn trophy, in which, notwithstanding the heat of the sun, some excellent scores were made. The conditions were 15 shots each at 800, 200, and 1,000 yards, Mr. L. Weber being the winner with a score of 204 out of a possible 225 points. The following are the total scores:—

Name.	800 Yds.	900 Yds.	1000 Yds.	Total.
L. Weber	70	64	60	204
W. B. Farwell	70	54	62	186
I. L. Allen	63	67	55	185
E. Rathbone	59	61	58	178
E. H. Sanford	64	59	55	178
H. Fisher	63	68	44	175
S. G. Perry	65	45	59	169
A. Anderson	66	61	38	165
A. J. Roux	67	49	42	158
Daughes Smyth	57	58	41	156

The second match was for the *Spirit of the Times* medal, 10 shots at 800 yards off-hand, for which there were 27 entries. Major Fulton was the winner, with a score of 40 out of a possible 50 points. The scores were:—

Name.	Score.	Name.	Score.
Henry Fulton	40	D. Pinney	33
I. L. Allen	39	H. Fisher	33
W. Robertson	39	J. T. Collins	32
G. B. Huntington	38	H. Frank, Jr.	32
W. B. Farwell	37	R. H. Keene	31
E. H. Sanford	36	C. F. Robbins	31
G. A. Roullier	34	F. N. DeWitt	31
A. Anderson	33		

THE IRISH MATCH.—The third and last competition for places on the team which is to shoot the return match with the Irish riflemen was concluded at Creedmoor on Wednesday of last week. The scores and competitors are as follows:—

Name.	800 Yards.	900 Yards.	1000 Yards.	Total.
Major H. Fulton	66	68	74	208
C. E. Blydenburgh	67	58	80	205
J. L. Allen	66	64	53	203
T. Lamb, Jr.	63	58	81	202
G. W. Davison	59	58	69	186
E. Rathbone	54	67	72	193
G. L. Morse	64	49	64	177
D. Smyth	62	63	51	176
G. W. Yale	62	58	54	174
H. Fisher	57	57	60	172

The cause of there being such a small competition was owing to the fact that many members of the regular International team stood "content" on their scores made while shooting for their places, so that of the above list there were but three selected who were not on the other team to shoot against the Irishmen. These were Messrs. Rathboue, Blydenburgh, and Allen. The team and reserve as now composed, with their scores, are as follows:—

Name.	Score.	Name.	Score.
W. B. Farwell	864	H. Fulton	872
F. Hyde	860	L. S. Brnce	811
L. Weber	849	J. A. Shafler	806
T. S. Dakin	835	C. E Overbaugh	802
C. E. Blydenburgh	828	H. S. Jewell	793
J. L. Allon	813	E. Rathbone	789

Mr. Rathbone is a native of Salem, Mass., fifty-three years of age, and is engaged in business in this city. He has already won the Luther Badge, a life membership in the N. R. A., and the Huntington trophy. In the Luther match he made the extraordinary score of 71 out of a possible 75 points, with five shots at 800, 900 and 1000 yards. Mr. Allen is a member of the firm of D. Allen's Sons, manufacturers of cordage, in Pine street, this city. He is thirty-four years of age, five feet ten inches in height, and has been engaged in practicing long-range shooting only since last fall. Charles E. Blydenburgh is but twenty-two years of age, and a student in the School of Mines, Columbia College. He graduated in the Class of '74, at Princeton College, and is five feet seven inches in height. All of these gentlemen shoot the Remington Creedmoor rifle.

SHARP SHOOTERS' UNION.—Last week saw the close of one of the greatest rifle meetings ever held in the United States. Riflemen from every part of the Union had assembled in numbers at Philadelphia and from the 26th of June until the 6th of July, a constant cracking of rifles was kept up. Mr. Wm. Hayes, of Newark, was the champion shot, making 330 4-inch bull's-eyes in three day's shooting (all the shooting was done at 200 yards, off-hand) and was awarded the gold medal and crowned "Schutzen King" of the United States, to hold the title until the next meeting of the "Union," which will be held at Union Hill, N. J., in 1878. He made in one day, or from 9 A. M. to 6 P. M., 123 bull's-eyes—a feat never before accomplished, and Mr. Hayes is the first American who ever held the honorable position of shooting king of the United States. The other best shots and prizes were: A. Stricker, California, made 211, $50; A. Rahwyler, California, made 196, $50; P. Jacoby, California, made 173, $40; Wm. Ehrenfort, California, made 144, $30. W. A. Streuli, California, made 109, $20; J. Laager, Philadelphia, made 106, $12; Geo. Schalk, Pottsville, Pa., made 87, $8; A. G. Hellwigg, N. Y., made 87, $8; Mr. Bauer, California, made 84, $6; Wm. Koenig, California, made 82, $6. Ninety more received medals and other prizes. The meeting was appropriately closed with the team match participated in by nine teams of seven men each, making the following scores, the shooting being at ring targets and counting accordingly:—

Name.	Rings.	Name.	Rings.
California team	1206	Philadelphia team	1139
Newark team	1104	N. Y. Schutzen team	1054
Zet-ler team, N. Y.	997	Philadelphia team	985
Baltimore team	949	Columbia team, N. Y.	915

Jersey Rifle Corps team, 853 rings.

Ten shots were allowed to each man, the first, second, and third best aggregate the three main prizes, and the man making the highest score in each team received a solid gold meadal; and the marksman who made the highest individual score of all, received the champion medal, valued at $100, which was won by Mr. J. J. Tobler, of the Helvetia Club, N. Y., who made 197 rings. The team medals were won by Philo Jacoby, California team, 192 rings; Wm. Hayes, Newark, team, 173 rings; New York Schutzen Corps team, J. W. Schollerman, 163 rings; Zettler team, B. Zettler, 156 rings; Philadelphia team, T. Laager, 180 rings; Baltimore team, F. Kramer, 154 rings; Columbia team, Capt. Ermisch, 157 rings; Jersey team, A. Zengner, 153 rings. The prize ($75) for best bullseye, 21-1000th of an inch from the centre was won by D. Wigit, of Illinois, W. Hayes, of Newark, being second (24-1000th). The winning team from California, with their scores according to Creedmoor measurement, was as follows:—

Name.	Total.	Name.	Total.	Name.	Total.
Philo Jacoby	48	A. Strecker	48	A. Rohwyler	48
Wm. Koenig	47	A. W. Suenli	46	J. A Bauer	44
Wm. Ehrenfort	43				

All out of a possible fifty points.

This victory for the California riflemen gave general satisfaction. Not only had they traveled an immense distance to compete, but their skill shows that even on the Pacific Slope the rifle has not been neglected. Mr. Jacoby, Captain of the team, belongs to the editorial fraternity, and we offer to him and his companions our sincerest congratulations on their success.

MASSACHUSETTS.—A new rifle club has just been organized at Springfield, the Constitution adopted being that laid down in the FOREST AND STREAM handbook. The title of the club is "The Springfield Amateur Rifle Association," with the following officers: President and Captain of the team, S. S. Bumstead; Vice-President, J. B. Squires; Secretary and Treasurer, L. H. Mayott; Directors, S. S. Bumstead, Chairman; J. B. Squires, L. H. Mayott, E. H. Smith, F. E. French, Frank M. Emerson, and Phelps Johnson. The association have secured a field near the old reservoir on the Chicopee Falls road, which furnishes capital ranges from 200 to 600, and possibly 1,000 yards, and during the coming week will put it in first-class order, fully equipping it with all the necessary paraphernalia. The first formal practice was to have been on yesterday, and we hope soon to record some first-class scores.

A match was shot at the Anchor Forge Range on the 13th inst., between teams representing the Massachusetts Rifle Association and the Sportsman's Club of Taunton. The conditions of the match were 10 shots each at 200 yards off-hand, under the rules of the N. R. A. The scores were as follows; possible score, 50:—

SPORTSMAN'S CLUB TEAM.		MASS. RIFLE ASSOC'N TEAM	
Name.	Total.	Name.	Total.
Jas. A. Woodward	42	J. B. Osborn	34
W. F. Parmelee	42	E. T. Osgood	31
W. C. Perry	41	W. H. Jackson	37
Dr. S. D. Presbrey	33	J. A. Lowell	43
Wm. H. Bent	38	John Foster	39
Dr. J. W. Hayward	41	S. G. Noyes	37
Thos. Breed	42	J. H. Frost	32
A. B. Hodges	34	S. E. Ring	38
Aggregate	323	Aggregate	311
Average, 40½.		Average, 38½.	

Following this was a match between the captains and reserves of each team under similar conditions, the "Sportsmen" again winning, as will be seen from the following scores:—

SPORTSMAN'S CLUB.					M. R. A.				
Names.	Score.			Total.	Name.	Score.			Total.
F. Mason	4	3	4	4	4	3	5	4	5	4	40	Steve son	4	4	4	2	3	4	5	5	4	1	35
B. D. Kelley	5	4	4	4	4	4	4	4	4	1	41	A. P. Clark	4	3	4	2	4	3	3	4	3	3	34
Richmond	3	4	3	4	5	4	5	4	4	4	40	Wemyss	4	3	3	3	5	4	4	3	4	4	37

E. King	4	5	3	3	3	4	4	3	4	3	34	Poland	4	4	3	5	4	4	5	4	1	5	39
Aggregate	194					Aggregate	188				
Average, 38 4 5.						Average, 37 4 5.					

CONNECTICUT.—The second competition for the bullseye badge took place at Willowbrook Park on July 18th. Mr. Orange Judd was the winner, with a score of seven bullseyes out of twenty shots, ten each at 800 and 1,000 yards. The next meeting will take place on the 22d inst.

MICHIGAN.—The following is a report of the target practice of the Greenville Rifle Club, of Greenville, Mich., made on Wednesday, July 5th; distance, 400 yards; no artificial rest allowed:—

Name.	Score.	Total.	Name.	Score.	Total.
E. H. Jones	4 5 5 5 5	24	Wm. Woodman	3 5 5 5 5	23
D. T. Sapp	4 5 4 4 4	21	H. Rossman	3 4 5 5 5	22
C. H. Hale	4 5 5 4 4	22	L. Spaulaing	5 5 5 4 4	23

WISCONSIN—*Milwaukee, June 15th*, 1876.—The seventh competition at 500 yards for the Brodhead field glass came off yesterday. Fielding wins the prize the third time and holds the glass. Next Friday we shoot for the Remington prize at 1,000 yards. The prize has been shot for twice; Bangs has won it once and Turner once. The following are the scores made yesterday at 500 yards; possible 75.—

Name.	Score.	Name.	Score
Fielding	70	Yale	67
Turner	69	Wells	66
Bangs	67		

WAU WAU.

—Col. G. W. Wingate is now on a tour of inspection of the several Rifle Ranges of the State. He has officially approved of the new ranges at Syracuse and Buffalo, which he speaks of in high terms, as being quite perfect in their appointments. After visiting the central portion of the State, extending his tour to Niagara Falls, he took steamer through Lake Ontario and the St. Lawrence to Cornwall in Canada, which is seven miles from the border line; and there embarking on a little steam yacht sailed up the Salmon River to Malone. The remainder of his inspection tour includes the ranges on the Hudson River, at Albany, Hudson, Poughkeepsie, Yonkers, &c. There is also a fine range at Pittsburgh. The work that Col. Wingate is engaged in will be very useful in systematizing the operations of rifle clubs.

—Mr. G. W. Yale has been appointed brigade inspector of rifle practice in the Connecticut National Guard, his rank being Major. The appointment is an excellent one in every respect, as in addition to being a first class shot Mr. Yale has a practical knowledge of fire-arms and their manufacture.

CANADIAN RIFLEMEN.—A dispatch to the Toronto *Globe*, dated Wimbledon, July 12th, says: "The weather is splendid, but the light bad, discouraging the Canadians, who are unaccustomed to fire opposite a bright sun. The competitions are not completed, but so far the Canadians have done well. In the Queen's Cup competition at 200 and 500 yards Lieut. Cole, Forty-second Battalion, Ontario, made 60 out of a possible 70 points. For the Association Cup Sergt. D. Mitchell, Thirteenth Battalion, Ontario; Private Ross, Prince of Wales' Rifles, Quebec, and Corporal Sprule, New Brunswick, made 46 out of a possible 50. In the Alexandra Prize, Bailey, Tenth Battalion, Ontario, and Sergt. T. Mitchell each scored 49 points; Lieut. Wright, Fiftieth Battalion, Quebec; Corporal Sproule, New Brunswick, and Bomb Brown, Wellington Field Battery, 46 points out of a possible 70."

"The Australians have challenged teams of five men from the English, Scoteb, Irish, and Canadian representatives to shoot a match with Martini rifles at 200, 500, and 600 yards; and with small-bore rifles at 800, 900, and 1,000 yards, the prize to fall to the team making the highest aggregate score. The Canadians are as yet undecided whether they will accept, as the first part of the challenge entails the use of the Martini Henry rifle to which they are unused."

BASE BALL—THE PROFESSIONAL ARENA.

—The League pennant contests to July 16th show the clubs occupying the following relative positions.—

Club.	Chicago.	Hartford.	St. Louis.	Boston.	Mutual.	Athletic.	Cincinnati.	Games won.
Chicago	..	3	2	6	4	5	4	24
Hartford	3	..	3	5	3	3	4	24
St. Louis	2	3	..	3	3	4	6	23
Boston	0	0	3	..	2	3	8	16
Louisville	0	2	1	4	..	3	4	14
Mutual	1	1	1	1	..	..	1	6
Athletic	1	0	0	1	2	..	4	11
Cincinnati	0	1	2	0	1	0	..	6
Games lost	7	9	12	19	20	23	29	130

It will be seen that the Chicago nine have a decided lead, and one that it will now be difficult for the Hartfords to overcome. Besides which the St. Louis nine have drawn up to closer quarters with the Hartfords than before. The Athletics are the last on the list of the Eastern nines and the Cincinnatis the last of the Western teams.

CRICKET.

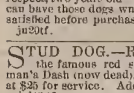
—An eleven of the Boston and Chicago Base Ball Clubs whipped the first eleven of the Chicago Cricket Club at Chicago, July 14th, in a four-inning game, George Wright leading the ball player's score with 24; Webb's bowling on the other side was quite a feature.

—The match between the Gentlemen and Players of England, which took place the last of June, was ended July 1st with the result of a draw game. Daft led the score of the Players with 61, and Grace that of the Gentlemen with 90. Almost every man of both elevens scored double figures, though Grace was bowled in the first innings by Emmett for a duck egg. The Gentlemen had the best of it when time was called, as they had scored over 200 with but four wickets drawn in their second innings, having but 50 odd to go to win.

—Last week the Staten Island Club, assisted by Messrs. Bance and Jones of the St. George's Club, got away with the Manhattans in a match, the bowling of Brewster and Jones being too much for the Island eleven's opponents.

The Kennel.

FOR SALE.—IMPORTED GORDON dog "Duke," 4 years old; Black and Tan dog pup 2 months old, by "Duke;" Liver and White Setter Slut 20 months old, thoroughly yard broken and been hunted; Liver and White Ticked Pointer Dog pup 2 months old, sired by "Old Phil," dam from imported stock—Price low. Address P. O. Box 53, Scranton, Pa. jn20 1t.



TWO FINE BROKEN DOGS FOR Sale.—Dan, a Black Setter dog thoroughly broken, out of Scott Rodman's Dash, and H. Shipman's Black and Tan Bitch, four years old. Duke, Red Irish Setter out of B. Nelson's Maggie, thoroughly broken in every respect, two years old. Parties who wish to purchase can have these dogs worked for them, as they may be satisfied before purchasing. Address J. W. this office. jn20tf.

STUD DOG.—ROBINSON'S "JACK," the famous red setter, brother to Scott Rodman's Dash (now dead), is offered for stud purposes at $25 for service. Address W. H., at this office. jn13-tf

THE "FISHING LINE."

Brook Trout and Grayling Fisheries

OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equalled, in the great abundance and variety of fish contained.

Brook Trout abound in the streams, and the famous American Grayling is found only in these waters

Brook Trout Season opens May 1st.
Grayling Season opens June 1st.

Black Bass, Pike, Pickerel, and Muscalonge are also found in large numbers in the many lakes and lakelets of this territory. Fishing canoes can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities offered to tourists and sportsmen; also on and after July 1st Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For "Guide," containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, Send to Forest and Stream office, or address

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road, radiating from Chicago, like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country lying between; with another line it passes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Naganance and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Wissota, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and, as the Illinois Central, reaches Warren, Galina and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction, and Council Bluffs and Omaha. This last named is the "GREAT TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento, San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEESE, AND BRANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of this Company will be found unsurpassed by any in the West.

MARVIN HUGHITT, Gen. Supt., Chicago.
W. H. STENNETT, Gen. Pass. Agt., Chicago.
ap16

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMP'Y

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and annoyances of reshipment, while the excellent cars run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

The Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principal cities in KANE, RENOVA, BRADFORD, PARKESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEECH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

D. M. BOYD, Jr., Gen'l Pass. Agent.
FRANK THOMPSON, Gen'l Manager. feb17 tf

NEW YORK & LONG BRANCH R.R. CENTRAL RAILROAD OF N. J.
ALL RAIL LINE BETWEEN NEW YORK, LONG BRANCH, OCEAN GROVE, SEA GIRT AND SQUAN.

Time-table of June 19th, 1876: Trains leave New York from foot of Liberty street, North River, at 7.30, 9.00, 11.45 A. M., 1.45, 3.45 4.30 and 6.00 P. M.

All trains run to Long Branch. The 7.30, 9.00, 11.45 A. M., 1.45, 3.45, 4.30 P. M. trains run through to Sea Girt and Squan.

Boats leave foot of Clarkson street at 7.35, 9.05, 11.35 A. M., 2.30, 4.20, 5.20 P. M.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close, and with *great penetration.* For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *quick.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office

88 Wall Street, New York.

Of all kinds and descriptions.

For sale in all parts of the country. Represented by

F. L. Kneeland,
Feb 10-1y 70 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The *strongest* and *cleanest* Powder made. Nos. 1 to 7, packed *only* in sealed 1 lb. canisters. The coarser sizes (higher numbers) especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean Nos. 1 to 5. Packed in metal kegs of 6¼ lbs. each, and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.g, FF.g, FFF.g, the last being the finest. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 6¼ lbs., and in canisters of 1 lb. and ½ lb.

All of the above give high velocities and less recoil than any other brands made.

BLASTING, MINING, AND SHIPPING POWDER OF ALL GRADES AND SIZES PACKED IN WOOD OR METAL KEGS OF 25 LBS.

SAFETY FUSE AND ELECTRICAL BLASTING APPARATUS.

LAFLIN & RAND POWDER Co.,

26 Murray St., N. Y.

Sole proprietors and manufacturers of the celebrated ORANGE brand of GUNPOWDER. Recommended and used by Capt. A. H. BOGARDUS, the "Champion Wing Shot of the World."

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder. 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; eighting shots extra.

Will shoot for money if desired.

The powder is also well adapted for shot guns.

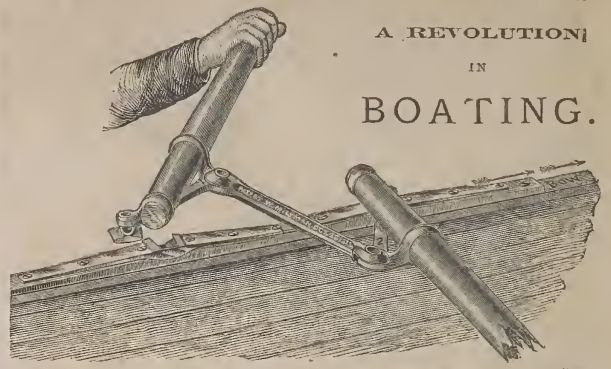
City, at $2 per Annum, or Single Copy, 10 cents. Jn6 tf

The Goss Revolving Cartridge Holder

CARRIES PAPER OR METALLIC SHELLS, either end up, revolves on centre slides, weighs but 1¼ pounds, and is only 1¼ inches wide. Holders flare at top so as to quickly receive the shells, and, being elastic, *securely* clasp the same.

For ease of action and rapid shooting it excels anything of the kind invented.



PRICE, C. O. D., $8.50.

In ordering, give the size of shells and a *loose* measurement outside of vest.

ly22-1y N. S. GOSS, Neosho Falls, Kan

BOW-FACING ROWING GEAR.

A REVOLUTION IN BOATING.

This rowing gear is an invention which allows the rower to face forward instead of backward, pulling in the same manner as with the ordinary oars. The oarsman faces the direction in which he goes, and rows faster and more easily than with any other oar. The stroke is longer than with ordinary oars. The oars can be closed no out of the way without detaching them from the gunwale. The boatman makes no more effort in steering than in directing his course while walking. These oars can be attached to and detached from the boat very quickly, and they can be closed up in a convenient form for carrying. Can be attached to any boat, and is especially adapted to hunting, fishing, and all kinds of pleasure boating. Address, during Centennial, "Hunter's Camp" of Forest and Stream, Centennial Branch P. O., Philadelphia.

Paper and Metallic Shells

FOR

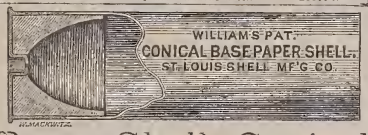
Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.



THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dec23 tf

New Paper Shell, Conical Base.

(WILLIAMS PATENT.)

MANUFACTURED BY THE

St. Louis Patent Shell Manufacturing Co.,

Office 209 North Fourth st.

The advantages claimed for these shells are—Cheapness, a saving of 25 PER CENT IN THE USE OF POWDER, less recoil, greater penetration. The best material is used in their manufacture, and they will be found a first-class Shell, equal in quality to the highest priced English Shells. Sizes made are No. 10, 2½; No. 12, 2¾ in., central fire. Longer Shells made to order at extra cost. Ask your gun dealer for these, and buy no others. P. S.—The No. 12 Shell will not be for sale until August 1st jy13 4t

DESCRIPTIVE GUIDE

TO THE

ADIRONDACKS,

AND HAND BOOK OF TRAVEL

To Saratoga Springs, Schroon Lake, Lakes Luzerne, George, and Champlain, the Ausable Chasm, the Thousand Islands, Massena Springs, and Trenton Falls,

By E. R. WALLACE,

Newly Revised Edition.

Handsome 12mo., Flexible Covers, Red and Gold, Maps, etc. Beautifully Illustrated. Over 300 pages. Price, $2.

TESTIMONIALS.

From Hon. J. T. Headley, the Historian, Author of "Adirondack, or Life in the Woods," &c.

It is admirably written, and has just enough of humor, sentiment, and description of scenery mixed, to make it delightful. The illustrations are well chosen and very effective, while the instructions respecting routes, localities, distances, outfits, &c., embrace everything that can be desired. Taking it all in all, it is the most complete book that has been published on the Adirondacks, not excepting even my own—a compliment that I trust will be properly appreciated for its extraordinary disinterestedness.

From Albert B. Street, the Poet, and Author of "Woods and Waters," "The Indian Pass," &c.

I think it is the *best* work on the forest that has appeared—superior in word-painting to Murray's, and full of wood pictures and vivid scenes of campfire. We realize that we are in the forest, are living with you in the scenes described, and that the trees are waving and the waters flowing over and by us. This, I think, the true test of a good book, impressing its reality and distinctive life on the mind. As a "Guide Book," it is most creditable and valuable. Indeed, it is the *only* thing of the kind that has yet been published—the very thing that has been so long wanted and waited for. It must have cost you intense application and labor. You may well be content that you have produced a good book.

From Benson J. Lossing, the Historian.

I have read those portions descriptive of the places which came under my personal observation, with the deepest interest, and most cheerfully testify to the general accuracy of your pictures as I recall impressions made of them at the dates of my visits. I regard your "Descriptive Guide" and the "Appendix" as a most useful—nay, indispensable, manual for tourists to that wonderful Wilderness. A tour in that region is eminently a practical matter, and for that reason I regard your "Guide" as an important, useful, and timely publication.

BUY IT Vanity Fair.

It is shaved from the best Natural Leaf, for Meerschaum and Cigarettes. Does not make the tongue sore. Sample on receipt of 20 cents. Highest award, Vienna, 1873. Send for circular. WM. S. KIMBALL & CO.,

PEERLESS TOBACCO WORKS, Rochester, N. Y.

From Seth Green, Supt. N. Y. State Fisheries.

I find Vanity Fair to be the best article of tobacco adapted to the wants of the sportsman. Have used your tobaccos for many years, and know them all to be first-class.

For Sportsmen.

A trusty friend, in weariness or trouble; a solid resource in Winter and rough weather, is a sweet pipe with Vanity Fair. Best dealers have it.

From A. B. Lambertson, Rochester.

Having smoked your tobacco, Vanity Fair, by the camp fire and by the hearth, I believe it in point of fragrance and taste superior to all brands known to me. Being in search of a tobacco that would not fire the tongue and mouth, I was made delighted with your Vanity Fair, and found it to be the *ne plus ultra* of natural leaf.

For Cigarettes.

A cigarette is an interlude to the serious habit; a graceful make-believe for spare hours. For cigarettes Vanity Fair has no equal. Best dealers have it.

From Forest and Stream, N Y.

We have received from Messrs. Kimball & Co., of Rochester, some choice specimens of their celebrated Vanity Fair tobacco in neat metal cases holding a pound each; and, after most thorough trial, do not hesitate to concede to it all the good qualities which its manufacturers claim for it. It is a most superior article, and a great comfort to discriminating smokers.

THE ORVIS REEL.

The Most Compact, Neatest, Cheapest, and Durable Reel in the Market.

NO 1.—This Reel is extra nickel-plated and finely finished. Is perforated to make it light, and keep it free from sand, also that the line may dry without removing it from the reel after use. Has a very perfect click. It is very light, very strong, and holds from 40 to 50 yards of line. It is more compact and less cumbersome than ordinary 20 yard reels. It is quite narrow, and takes up line rapidly. Put up in neat Black Walnut Case, price $5.

NO. 2.—For Prizes. Same style as No. 1. Heavy Gold Plate. Extra finish, with case, price $10.

Sent by mail, postage prepaid, on receipt of price, or by express, C. O. D. LIBERAL DISCOUNT TO THE TRADE. Send for NEW Price List of Fishing Rods, Reels, Flies, Lines, &c., &c. Mention this paper.

THE NEW

BOSTON SHOOTING SUIT,

Manufactured only by

G. W. SIMMONS & SON,

Boston, Mass.

We offer this season an entirely new design of WATER-PROOF SHOOTING SUIT (made from extra quality duck), in the preparation of which we have been assisted by the advice and suggestions of our best resident sportsmen.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, the arm holes ventilated, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at $13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloons.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the *Golden Rule* (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skilfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, water-proof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Waist Measure, Height, Breast Measure, Length of Sleeve, Size of Head.

W. H. HOLABIRD

Would most respectfully announce to his patrons and friends that he is prepared to make

Shooting and Fishing Suits

at the above prices. The ten dollar suit is better made than any competitor can offer for the same money. My original design having been appropriated by other manufacturers, I have been compelled to make many changes in the arrangement of pockets, &c., for which I have to thank the fraternity at large for suggestions. I believe that I have the BEST SHOOTING AND FISHING COATS IN THE WORLD,

and respectfully solicit your orders. I send my new illustrated Catalogue, 16 pages, free on application.

Dealers will find it to their advantage to handle my goods. They are better known and more highly esteemed than any other make.

CHAMPION GUNS OF ENGLAND.

PAPE'S

Unrivalled Sporting Guns.

Stand unequalled in every contest. Their performance at the London Trials of 1875 beats the records of any maker in the world.

1875. 12-Gauge, Choke Boring.

Maker of Gun.	Exhibitor.
1st—Greener	Greener.
2d—Pape	Davidson.
3d—Pape	Pape.

Out of a class of 68 guns, 3 out of the 6 best were made by Pape. The Greener gun was protested against on the spot for having its score false counted, the fact proven there, and afterwards confirmed by same gun being shot for two days per week for six weeks in succession, when its average score only took 24th place, its very best score being greatly below the scores of the best six guns.

1875. 12-Gauge, Old Sporting Bore.

Maker of Gun.	Exhibitor.
1st—Pape	Davidson.
2d—Pape	Davidson.

1875. Long Range, 60 yards, Choke Bores,

1st—Pape	Davidson

60 yards, Long Range, Sporting Boring.

1st—Pape	Davidson

Those champion Long Range guns, only 7 pound weight, with a charge of 3¼ dr. to 1¼ oz. shot, beat the best 8 bore Greener guns at 60 yards; weight, 15 lbs.; 6 drachms and 2¼ oz. shot.

1875. The Sportsman's Snb. Cup, valued at £45, was also awarded to W. R. Pape, for the original invention of choke boring. Winner of the London Gun Trials of 1858, 1859, 1866. Address

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

POPE'S

Rifle Air Pistol,

FOR TARGET PRACTICE.

Just the thing! sportsmen and military men. Shoots darts or slugs a distance of 50 feet. Perfectly accurate. By practicing with it one may become a dead shot. Each pistol is put up in a neat box, with 6 darts, 6 targets, 100 slugs, ramrod, claw wrench, and skeleton gun stock. Price, $5; nickel plated, $6. Sent by mail on receipt of price and 35 cents postage.

One of the many testimonials from the Commander-in-Chief of the U. S. Army:—

"It is surely ingenious in mechanism, quite accurate in aim, and useful in preparing one for the more serious handling of the ordinary rifle.

W. T. SHERMAN, General."

POPE MANUFACTURING CO.,

Sporting in the Colonial Times.

A FOX HUNT AT BELVOIR.

WE left the huntsmen breaking in the cover for a trail. The signal is given, and the horns sound a tuneful note, which is answered back by the mellow bay of the hounds. The gentlemen cluster on a hill near by as the dogs disappear in a brake and are lost to sight, except where they move the cover, as though a strong wind were passing over it. If there is a trail, no matter how cold, it will be struck off to a certainty, for every inch of ground is being gone over. A few minutes afterwards half a dozen dogs are seen to dash out with their noses on the ground, eagerly crossing and recrossing the path, and whining to each other, no doubt in their dog language, wondering whether any "old red" had been wandering there the night before. "Hark away! good dog!" cried the master, blowing a cheery note on his horn, and the hounds, circling around and giving a quick bark, dived again into cover. "No fox here," said one. "Don't be in a hurry," replied the master; "the dogs are driving beautifully." As he spoke the cover shook, and a low whimper was heard from one of the dogs, followed by a loud challenge from another. "That's old Jupe and Ringwood," cried the master; "Look out!" and as he sounded a clear blast from his horn, a deafening burst from the pack replied. "Tally ho! tally ho!" shouted the master, the fox is started, and away went the pack like mad, for the scent was very warm, and the fox had probably stolen away when the first notes of the dogs reached him, and had fully an hour's start. On went the pack with their noses down and their sterns up, filling the air with their loud baying, and close behind them galloped the hunters. It was a beautiful country to run in, mostly of broad, well-tilled fields, mingled with open forests and swampy lowlands. The trail lay directly across an immense field newly seeded in wheat, which afforded a superb view as the dogs swept forward nearly in a straight line.

The horsemen now settle themselves down for steady work. They know what is before them, and each rider is saving his steed all he can. Major Bullett is in the advance, and the trail keeps across the ground as straight as an arrow. A Virginia snake fence—an ugly piece of timber to jump—bars the way, but the Major takes it with a slinging sweep. Lord Fairfax, on his huge stallion, passes over with a rush, and young George flies over like a stone hurled from a sling. All the rest gallantly made for it, but several of the horsemen, splendidly mounted as they were, came to grief and had some bad falls, but nobody stopped to help them, and mounting the best they could the unfortunates limped back to the rendezvous, where they drowned their disappointment in deep potations of his lordship's best liquor. Once across the field the pack divide in the woods and then string off to the lowlands. Another fence has to be jumped, and it is a point of pride with every cavalier to take everything as it comes along. Then the ground becomes so swampy that the horsemen are brought to a halt; they gather in a group and listen breathlessly to the bays of the hounds. The old vixen is evidently making for his burrow, and unless he is pressed too hard he will gain it, and then good-bye to all sport, for the hunt will be up. But by the eager, frenzied yells of the dogs it is plain they are driving him hard. "He will make for the open country now," said the master, and such was the fact, for the wily animal, pushed so close, takes a circling stretch and starts back again to a field far off to the right, and soon the distant cry of the pack comes sweetly upon the breeze, as they listen with their souls in their ears. Suddenly a cry from one of the huntsmen causes the others to glance in the direction of his extended whip, and away off, like a speck in the distance, the fox is seen running for his life. With a sounding shout the horsemen drive in their spurs and are off like the wind in his direction, and as they push on they see the hounds running breast high, for the scent now lies overwhelmingly strong, and every dog is giving tongue. As the gentlemen dash on the parson leads the charge, waving his three-cornered hat and shouting like a schoolboy. They are just in time to see the fox cross a high fence. He goes down several panels before he jumps it, and then keeps on toward a forest cover. It is a pretty sight to see the dogs cross the fence. The more excitable launch themselves to the top, and go across like successive billows breaking over a rock. Some wise old fellows squeeze themselves through the panels and overtake their fellows, but by the time they cross the fox is lost in the woods. The horsemen leap the fence and keep close up to Jupe and Music, young Byrd's dogs, which are running neck and neck. It is getting very exciting, and every horse is let out and urged forward. A few hundred yards another fence looms up. The dogs cross it in a second, and every horse was run sheer at it, but it proves a cropper to many, among them the parson. Fully a third of the riders either get bad falls or their horses "crave."

Now is the great moment. Who is up? and who is lost? Our fancy supplies us, and we think we can name them all. Look to the right. Some distance behind the pack we see two men riding superbly, taking everything in their path. One is the Earl, his huge thoroughbred taking gigantic leaps; the other is his young surveyor. The old, reckless, racing spirit is strong in them both, and all uncurbed now, and they are racing as if for the King's Cup at the Derby. A length behind is Major Bullett, who is using his horse with great skill and nerve; a short distance back, plenty close to enjoy the run, is the rest of the field. All are pushing their horses, while the glorious baying of the hounds in their ears intoxicates them like wine. It is a tough old veteran they are after, and the fox still keeps his path for several miles straight as the crow flies, skimming the earth almost as fast as a swallow, crosses several fences, goes through a clearing, scampers in and out of a farm yard, dashes through a brown sedge field, and seems to be determined to win by sheer bottom. The pace begins to tell on the dogs as they follow him relentless as fate; and now it is that a strain of bad blood, or a defect of body begins to show. Many display symptoms of distress, and fully a score are limping painfully behind, howling pitifully in their rage and distress as their companions leave them in the rear. The way now is across country, and each horseman has to pull in and ride with cautious and judgment, for it is bad ground—a hilly, rough and uneven old cornfield—and the wearied horses can hardly keep from falling. Six riderless horses are flying wildly across the field, the stirrups dashing against the saddles, and a report passes from mouth to mouth that one or two are seriously hurt; but there is no time for inquiries. The dogs are almost out of sight, and the hunters spur up. They cross the bad ground at last, but find that a post-and-rail fence is in their path. A warning shout from the Earl and all nerve themselves for the fearful leap. His lordship tries it first, but his horse goes crashing on to the top rail, evenly balanced, and plays see-saw for some seconds, finally struggling back on the same side, dead lame. Not so with young George Washington. He sails gracefully over one panel as Major Bullett jumps the other, and both speed on, with nearly a score of horses not far behind. The sight is splendid. They are now in another immense field, as level as a floor, and in full sight of the fox, who is making the ground fly under him in his attempt to get to a coppice beyond. The dogs running mute, and with heads high in the air, it is a sight to thrill the nerves and make the pulses beat with a wild joy. Away, away, and and the horsemen ply their whips until their steeds race on with every muscle strained. Slowly they gain on the hunted vixen, and a wild cheer bursts from the leading riders' lips, for they feel certain now of getting the brush.

But Mousieur Le Reynard is not going to relinquish his tail without another struggle, for when they reach the woods the baffled cry of the hounds meets their ear; they find the whole pack circling in every direction trying to hit off the scent, but the trail and the fox seem to have vanished. This diversion gives the horses a breathing spell, and the riders all dismount and unbuckle their girths.

The pause is of short duration, however, for the master coming up and making a few of the staunchest dogs make a wide circuit and "draw cover," easily picks up the trail, when a ringing blast from his curved horn brings all the dogs and riders to him. Then all keep on after Old Reynard. Only those who have witnessed it can understand in what an extraordinary manner hounds that are left behind in a cover can make their way through a crowd and catch up with the leaders of the pack. They thread their way unerringly through the legs of the horses, who are running at full speed, and it is very rare for one to get marred or killed. Forward the whole pack kept on with a "good crash," but Juper has usurped the place of old Reynard. Poor dog! he was doing his best, but age was telling on him. Now the trail leads them into a field which is covered with sheep grazing on the winter's wheat. To run among the sheep is a favorite ruse of the fox; but with the veteran dogs it does him no service, for the sheep scatter into a half circle as the fox goes through, and the dogs keep on without any diminution of their speed. The fox, hard pressed, has again to trust to his legs, and it is to be a fair run now, with no shifts, evasions, or strategems, and the often discussed and mooted question which can last the longest and has the most bottom—a fox, a hound, or a horse—is now to be tested.

All know that this is to be the last and final push, and he will be a proud man who can gain the brush after such a desperate chase. The rivalry that makes men do or die swells each breast and fills each heart, and as every horse launches forward, every rider makes up his mind to be in at the finish, if reckless riding and fearless spirit can do it. But as they sweep on, young Byrd pulls up, the Earl, whose horse is laboring painfully, does the same, and Cary follows suit, for in their front is a wide stream, deep and rapid, with high, precipitous banks. They fear to attempt it with their knocked-up horses, and ride along to cross at the ford. Ned Ambler, who has judiciously kept back, now surges forward and ranges alongside of Washington and Major Bullet, who have never drawn rein one instant, and all these settle themselves in the saddle, and grasping the reins with a firmer clutch, rise to the jump. It is a fearful one, and as they are hurled through the air they unconsciously close their eyes. Two land safe, and ride on without looking back; but Ned Ambler's horse's foot slips and down he goes in the middle of the stream, but the depth of the water saves him from serious harm, and he scrambles out as best he can, and it is well Mistress Mary Cary cannot hear the savage oaths and see the way the heavy-loaded whip strikes the losing horse. The Earl has practically given up the chase, the others are too far behind to catch up, and the young Surveyor and the Major speed along side by side. A high-looking, crazy old inclosure is in their path. It is a huge concern—a rotten, ancient fence, the rails tied together with hazel and grapevine, and as the horsemen dash through they send the old panels, stakes and planks flying in every direction. The two struggle desperately on as only men can whose blood is heated with a wild excitement. The fox is only twenty paces in front, evidently fast sinking, his tongue hanging out, his tail down, yet game to the last, and running with all his failing power; the hounds are speeding along so close together that a table-cloth could cover the pack, their eyes gleaming like fire, and their wide, red mouths open. It is a splendid sight. Now a broad ditch intervenes, the fox disappears and rises again on the opposite side, the dogs duck down and are up again, still closer to him, the two riders urge their horses on with voice and spur, while the landscape reels and spins by. They reach the ditch, and both jump, but the horse of Washington, missing his distance, stumbles headlong, and away goes his rider from the saddle, falling among the pack, hurting the dogs but breaking his own fall. Fortune favores the gallant Major, for, with a superb and final effort, he rises in the air like the javelin, and strikes the ground lightly on the opposite side, and is among the dogs in a second. It is time. Jupe,

the leader of the pack, has caught up with the fox, and finding he must die, Reynard turns and faces his relentless pursuers—a crowding mass of tumbling dogs and confused noise of snapping, and the deed is done, the day is won. Major Bullett, throwing himself from his horse in their midst and plying his heavy whip, stops the dogs from mangling the carcass, and lifting the body high over his head, gives a cheer so loud and triumphant that it echoes and re echoes, telling all that the hunt is ended after the fin st run on record.

Thus the Major, whose brow was wreathed with many laurels, added another leaf to the chaplet, and as he rode homeward with the brush on his hat he never felt prouder, even when he wiped his sword after a dashing cavalry charge against the French in the far Canadas, or scattered the Indians by his well-timed advance on the shores of the Scioto. The chase being over, the huntsmen wended their way back to the rendezvous, the horns all sounding the notes of triumph. They found the whole meet there, though many were sadly bruised and battered. The parson was in a pitiable plight. His rotund figure had many a wound, and his clerical suit was ruined forever. He was of course the recipient of many rough jokes, and Major Bullett composed a quatrain on him, which tradition has handed down to us. The parson's style of riding was very peculiar. He was a fat, plump man, but he was quick to make up for lost ground, and follow hard after the hounds; for so portly a figure he was a marvelous rider, and the Major's verses struck him off exactly:—

"The parson came next. For fat on the rib
No clover-fed bullock could be sounder;
A wonderful weight, at a wonderful rate,
He flew like a twenty-four pounder."

After a collation under the trees the party returned home. We may be sure that there was a banquet at Belvoir—a sound of revelry by night, when Virginia's chivalry had gathered; but there were no voluptuous glances, and the lamps shone on brave men only; for there were no fair women present; all the better if there had been, perhaps, for the cocked-hat gentry imbibed like fishes in those days, and got drunk from principle. In fancy we can see them thronging into the large dining-hall, which was all alight from a score of wax candles in massive silver candlesticks, and the glare of the huge fire touched the silver service with a crimson tinge like that of a sunset sky. We can see, too, the guests at the rich supper, which, after the fatigues and excitements of the day, they were in fitting mood to enjoy. None of the fair sex were present. It was a maxim of Epicurus himself, as well as Lucullus, that a banquet could never be enjoyed if there were women at the table. A fine dinner is too serious a thing in life to be trifled with, and a man owes a tribute to his digestion, without whose perfect condition life becomes a burden. A man can't play the agreeable to *les dames* and enjoy his soups, his roasts, and his wines at one and the same time. There is a time for all things, and if ever there is a period when reason and nature demand that man shall be independent of woman, that period is the dinner hour.

We can picture the brilliant company when George Mason, the prince of good fellows, kept the table in a roar; we can see the towering form of the Cameron in the chair, and George Washington sitting on his right hand, forgetting his love's mishaps, as he drains a huge draught from the Fairfax punch-bowl; and it doubtless was a fine sight to see them all rise and touch their glasses and throw off their liquor to a telling toast or taking sentiment. Of course they drank to "sweetheart and lovers," to the chase, to each other, and to the host. We may be certain that the circling bowl went round without any flinching. It was doubtless a pleasant sound to the ear—that clatter of knives, rattle of crockery, cluk of glass, popping of corks, confused mingling of voices—and when the cloth was removed and the solid port and madeira brought out, then the revelry began. With no fears of waiting wives or stern old "governors," the men and the youths drank deeply, the faces flushed to a deeper hue, the voices raised in tone, and the true na ures of the guests showed themselves. Steady old goers spoke of dashing runs and desperate exploits; the statesman forgot his caution and revealed the secrets of his heart; the lawyer betrayed the mysteries of his court; the planter discussed the crops; the parson, with his rubicund nose all aflame, was arguing in a thick voice the relative styles of female beauty with that rake, Major Bullett. I have an old letter of the date of 1769, which is dingy with age, and so dilapidated as to be almost illegible. It is a copy of Major Bullett's drinking song, written by himself, in a very large, quaint and irregular handwriting. The Major had a fine voice, and we can imagine him singing it in the great dining hall with a rousing chorus, such a chorus as can only be had after such a dinner. The song I copy literally:—

Friends, why so drowsy?
I pritee arouse thee,
The woods now ring with the sound of the horn.
Oh! Summus shaking,
Arise! awaken!
The dew drops sparkling and heralds the morn.
Chorus—Friends, why so drowsy? etc.

His mistress grieving,
The huntsman having,
Thro' fo ests to roam;
But ever returning,
His warm bosom burning,
His ardor increasing, he seeks his home.
Chorus—Friends, why so drowsy? etc.

His perils telling,
He seeks his loved dwelling,
And friends now dispelling,
He flies to her arms;
With added graces
Her love she embraces,
And banishes sorrow in love's alarms.
Chorus—Friends, why so drowsy? etc.

I have given as correct an account as the scanty material would admit, of the style of sporting of that day, and I have portrayed Washington in an entirely different light from the rest of the scribblers In his youth George was a wild blade, a devout and constant lover of pretty women, blooded horses and athletic pastimes; he was noted for his strength, and was always ready to wrestle, to pitch the bar, or to run a race with anyone. In his later life his grand qualities displayed themselves, and he has so dazzled the eyes of posterity that they are taught to look up to him as something more than human—a man who had not the passion or vices of men, a being absolutely faultless. I have heard that the descendants of Washington have in their possession many of his letters written in early life, which they will not publish for fear it will make the American people think less of him. I do not vouch for this, but tell it to you as it was told to me. If they fear that the popular idol will be lowered they can dismiss their fear, for the adoration of the people is like the feeling of the sentimental Sterne, who cried over a dead ass and starved a living mother. So long as an unfinished monument to his memory rears its unsightly shaft, so long will plain people think that that memory is but a mawkish sentiment which is indulged in because it is cheap. The men of those days are long since dust, but many of them left names that will never die. Lord Fairfax always remained loyal to his king, and he died in 1781. House, in his history, remarks; "Very soon after the surrender of Lord Cornwallis, when the news reached him he called his servants to assist him to bed, observing, 'It is time for me to die,' and truly the noble, generous old man never left his room until carried to his tomb." Major Bullett was killed, I believe, in the Revolution, though I cannot obtain authentic information of his death. One of the most noted fox hunters in the whole country was John Edwards, who lived a few miles below Mount Vernon. He was a poor man, owning only a small farm and half a dozen negroes, but he was such a thorough sportsman that he was cordially welcomed at every meet. He broke his neck while jumping a fence during a protracted fox hunt, and the following epitaph was placed on his tombstone:—

Here lies
JOHN EDWARDS,
Who was unhemmelled in Oct. 1738,
and was chased by
Col. Death's pack of hounds,
who ran him to earth,
After a long and exciting chase
of 40 years.

ALEX. HUNTER.

A FISHING EXCURSION IN NEW BRUNSWICK.

IN accordance with a promise of long standing to introduce a friend to the beauties of the lakes in Charlotte County, New Brunswick, and the unrivalled trout fishing to be found there, we find ourselves in June ascending the path which leads to the Indian lodges, to engage the indispensable services of Sebatis. As we emerge from a little wood the Indian lodges open to view, and we are challenged by those ever-wary sentinels, the Indian dogs, which partake in many ways of the peculiarities of their masters, resist all our attempts at becoming friends, and retire barking and snarling as we advance. Numerous little dusky figures of Indian children start up from behind bushes and stumps, where, unseen themselves, they had watched our approach, and dogs and children in a mad scamper seek refuge in the lodges. Aroused by the tumult the Indian men and women begin to show themselves at the doors, and we see the well known form of Sebatis advance to welcome us. Our errand is stated, his services and canoe are engaged, and arrangements completed to start the next morning.

The morning was cloudy, with a moderate breeze; after a few moments' consultation, notwithstanding Sebatis gave it as his opinion that we would have a rough time of it on the lake, as there was every prospect of the wind increasing, we determined to try it. So Sebatis, taking the canoe on his back, started off through the woods for the shores of Lake Utopia, giving us as much as we could do to keep up with him, although our loads of fishing rods, &c., were light in comparison to his, and he never paused for rest until, having completed the half mile between his lodge and the lake, he deposited the canoe on the beach, and when we came up had lit and was puffing away at that never-failing solace, his pipe. We were not long in making the discovery that what had only appeared in the shelter of the woods to be a slight breeze proved to be a brisk gale on the water. Sebatis launched the canoe, and, paddle in hand, stepped lightly in, as only an Indian can; and the next moment, impelled by his sturdy strokes, we were bounding merrily over the waves. The sky was darkening ominously, and the wind steadily increasing as we paddled along for four miles under the lee of the shore, until we reached Birch Point. Here we had to cross the lake, and there was no concealing the fact that we were fairly in for a wet time of it. If we had any doubts on the subject they were instantly dispelled by the attitude of Sebatis, who, throwing his hat into the bottom of the canoe and brushing the long black hair from his face, seemed bracing all his nerves for the coming struggle. And now as we left the shelter of the shore we got the full force of the gale, and our canoe went dashing madly over the waves. Presently we felt our frail bark quiver under us, and with the water trickling down our backs we realized the fact that we had shipped our first sea. As it is totally inadmissable to ship water in a canoe on account of the difficulty of baling, Sebatis now changed his tactics, and instead of meeting the waves gradually allowed the canoe to wear off into the trough as they passed. Only the most consummate skill on his part could have effected this with safety, and I believe had any white man attempted the like exploit we should have been instantly swamped. It was now blowing a whole gale of wind, and the sky was dark as midnight, except where the sun over and anon broke through the clouds, revealing the rugged forms of the Red Rock Mountains. For an instant the sunlight and shadows play at hide and seek, and then all is gloom again. Sebatis' powers are evidently taxed to their utmost, and full well we know what one false stroke of his paddle would do; we are powerless to aid him; all the assistance we can give is to sit perfectly still, and this we require no bidding to do. As a wave larger than its predecessors approaches his eagle eye brightens, and a shade of anxiety passes over his otherwise imperturbable face. The wave passes and with it his anxious look; and this impersonification of coolness and intrepidity paddles along, looking positively indifferent. A little island lies in our track; Sebatis eyes it momentarily as if he meditated landing, but the surf, dashing high on the rocky shore, precludes any such idea, and he keeps steadily on his course. Now the distant rumbling of thunder is heard, increasing in volume as it approaches, breaking into loud crashes overhead, reverberating among the hills and passing away in low mutterings. A few large drops, then down comes the rain, a perfect deluge, and in a twinkling we are drenched to the skin. Flash upon flash of vivid lightning, majestic rolls of thunder, and we are in the very midst of a summer storm. A few more strokes of the paddle and we near the shore. But where to land? Where in all that boiling surf can we find a spot to beach our light canoe? Sebatis answers our looks by pointing the canoe for a bridge which appears in sight as we round the point, and in a few moments we shoot under it, emerge into the comparatively calm waters of Trout Brook, and safely land, verifying in our persons the old adage that speaks of fisherman's luck, "a wet jacket and a hungry stomach."

The canoe is unpacked, and Sebatis proceeds to make a fire. With a few blows of his axe he knocks the wet bark off an old pine log, and procures a plentiful supply of fuel dry as tinder, and we are soon drying our soaking garments before a roaring fire, while Sebatis prepares the lunch, of which we are in sorry need. In an hour or so the rain ceases, the sun shines out bright and warm; and as we must lose no time we pack the canoe and continue our voyage up Trout Brook. Pleasantly we glide along the placid stream, through the reeds and lilies, and under broad-spreading branches of the silver birch; in places the birches meet overhead, and entwining their branches lovingly form green arches, under which we pass. Now and then as we paddle through the long reeds, black ducks startled from their summer haunts rise with noisy quacking and seek safety in flight. As we watch them we think with pleasure of September when with trusty double barrel and our good retriever we shall bag the flappers now all unconscious in their parent nest. With regret we leave the lovely brook, and shoot into the waters of Trout Lake, on the opposite shore of which we land on a sand bar, and put out rods to try our luck with the speckled trout. We take up our position in the canoe opposite the inlet to the lake; Sebatis sinks a pole into the sand to hold on by and to prevent the canoe from drifting, after a few casts a fish is struck and landed; and now the trout are breaking in all directions, and as fast as our flies touch the water they are seized by two and often three fish at a time. The trout are not large, averaging about half a pound; they are the trout which belong to the lake. Later in the season (September or October) the large trout, often weighing four pounds and upwards, run up into the lake, and are taken in large numbers with the fly. Grasshoppers are used with killing effect by the country people. After some excellent sport with the small fry, and having filled our baskets, we put our rods up and bid farewell to trout lake. We make a portage of half a mile over a hill, and launch our canoe in Mill Lake. As we paddle up to the mouth of the inlet our attention is attracted by the strange spectacle presented by the reeds on the margin; each reed appears to be festooned with silver tissel, which quivers and flashes in the bright sunlight. Curious to solve the mystery we land, and find that the effect is produced by dragon flies just bursting from the chrysalis which is attached to the reeds; and their wings fluttering and drying in the sun as they became detached produces the effect which we witness. Every instant dozens are freed and fly off. Countless numbers fall on the surface of the lake, but I do not notice that any trout rose at them.

We land again at the favorite fishing place, a deep hole at the mouth of the inlet, put out our rods and begin casting, at first without effect; but before long we have good sport for about twenty minutes, when the fish suddenly leave off rising. In a short time, however, the trout begin to show themselves again, and we resume our sport. Side by side we throw our lines, and land our fish with varying luck until, fairly surfeited with our success, we cry enough, and count and admire our fish. As the day is growing late we start through the woods for Crazy Lake, where we are to camp for the night. On our way we surprise an old hen goose and brood. She, with trailing wings and uttering a plaintive warning cry to her young ones, entices us to follow her, almost permitting us to put our hands on her. In the meantime the little fellows scamper off in all directions, and assured of their safety she secures her own. As we have had a pretty hard day of it we are not sorry when the two-mile tramp is over and we arrive at Crazy Lake; and Sebatis seems of a like mind as he drops the canoe with a grunt, and proceeds to make a bough camp and prepare our dinner. The trout prove excellent. So do our appetites. But with the night come the only torments to our otherwise perfect enjoyment, black flies, mosquitoes and midges, the latter the greatest torments of all. So small as to be almost imperceptible, they sting most villainously, creeping up your nose, into your eyes and ears, and almost driving you demented. The Indians not inaptly call them "leel 'nn no see 'ums." They have not troubled us much in the day, but now seem bent upon making up for lost time. We slay them by thousands, but only *pour encourager les autres*, for their place is instantly filled by countless battalions. Our weariness proving superior to the torment, however, we finally get to sleep.

Waking early Sebatis has our breakfast ready; and that over we start to try our luck in Crazy Lake. The trout in the lake are large, and have been taken of five pounds and a half weight. As we can not both fish from the canoe we desire Sebatis to make a raft for us. He soon procures the number of logs necessary for the purpose, and lashes them firmly together with withes, and places over all some large sheets of bark peeled from spruce trees. Leaving Sebatis to his own devices we pole off into the lake, take up a favorable position, and begin to cast. Faithfully we whip the water for half an hour without getting a rise; then up pole and off to another position. All in vain we change our casts and offer the most tempting lures our fly-books afford. The trout, proverbially shy in this lake, will not deign to move, and at last we give it up and pole our raft to an old pine log which lies half in the water and presents a good chance for us to land. We clamber up the old pine, and seating ourselves on the trunk with our backs to the water, light our pipes and console ourselves with the idea that our finny friends will rise by-and-by, as the sky is getting cloudy and a slight breeze is springing up. Even while we speak a heavy splash is heard in the lake, and turning round quickly we see the large circles in the water expanding towards the shore, marking the spot where the trout rose. As we pole to land we notice that the pole, after sinking through a tangled bed of weeds about four feet under water, brought up in hard gravel. A trout had evidently been routed out of this haunt by our poling. Hastily we get down to our raft, and silently push off and anchor near the spot where the trout broke. At the very first cast a heavy fish is struck. And now we are in our glory. While go the reels as the trout bolt for deep water. Gradually we reel them up, and ply them with point and butt. With the greatest difficulty and risk to our rods we prevent their dashing under the raft in their mad efforts to get free. At length the fish become more shy, and presently few are moving. We are nothing loth to leave off, as we have now over three dozen trout, few of them under one pound in weight. So we up pole, push ashore, land, and exhibit

to the admiration of Sebatis our speckled spoil*. With infinite gusto we attack the lunch which Sebatis has waiting for us; and as nothing to advantage can be done in fishing in the heat of the day we saunter off into the woods for a sketch, and soon find a lovely spot where trailing arbutus in full bloom mingles its perfume with the blossoms of the wild cherry and moose-wood, and transfer it to our portfolio. Retracing our steps to camp we find everything packed in readiness for our return to Lake Utopia, at the head of which lake we are to have the evening's fishing. Off we tramp, cross Mill Lake, carry the canoe over another portage of a quarter of a mile, launch upon Lake Utopia, and paddle to the head of the lake. Here, while we are dining, we hear a rustling in the bushes; an Indian appears bearing a canoe on his back, followed by two others carrying packs, guns, snowshoes, &c. It is the old Indian chief, John Francis, his son, Mitchell Francis, and the Indian doctor, Sankobasin. They are on their way home from the sugar camps, where they have been since winter boiling maple sugar, trapping, &c. We invite them to join us at dinner. Sebatis informs me that the old chief is a good story teller, has an excellent memory, and can relate interesting incidents concerning the first settlement of the country, which he had from his father and grandfather. As he has all his dresses belonging to his station as chief of Passamaquoddy Indians with him, we offer to draw his portrait if he will remain all night. The old man kindly acquiesces, and invites us to be his guest for the night in the sugar camps on the hillside. So we cross the lake to the mouth of a cool brook where we think the trout will be rising in the evening. As we draw near we see them breaking, anchor the canoe, and in an hour or two our baskets are filled. A shelldrake starts up in alarm and flies far away until his form is lost in the golden depths of the evening, recalling vividly the lines by the poet Bryant:—

"Whither 'midst falling dew
While glow the heavens with the last steps of day,
Far through their rosy depths dost thou pursue
Thy solitary way?"

Accompanied by the chief, his son, and Dr. Sankobasin—the latter has a peculiar expression, he laughs only with the lower half of his face, his eyes gleaming savagely at you all the while—we tramp off to the sugar camps, where we are to spend the night. The camps are situated on the side of a hill covered with maple trees, a brawling brook runs at the door, and a break in the forest affords a peep at the lake and gives the charm of distance to a primitive and very lovely scene. It was well we had a good supply of provisions, for our family had increased alarmingly, and we now numbered six persons. Sebatis, working under the eye of his chief, exerted all his powers and served an excellent supper. After the old man had told us many interesting stories of old times, hunting yarns, &c., at Sebatis' suggestion we asked him to sing some Indian songs, and we are not likely to forget the strange, wild scene—the old man beating time on a birch bark drum improvised for the occasion, and singing song after song in Indian, until the grey dawn peeping through the chinks in the camp warned us to our tardy couches.

The next day we devoted to taking the old chief's portrait. He retired to his camp to make his toilet. "Shade of Commodore Trunnion, who is this?" We were startled to find an old naval officer of the time of George III. standing at the camp door with his back towards us. The only part of his dress which appeared at all incongruous was his hat, which was a common black hat with two bands of gold lace around it. It was our friend the Indian chief. The propriety of his having his portrait drawn in Indian costume was hinted at, but as he was in the habit of wearing this dress on great occasions, and it had been handed down to him by his fathers, some difficulty was experienced in prevailing upon him to change, particularly as he evidently considered himself *en grande tenue*, as also did the other Indians. At last he returned, and presently reappeared in porcupine quill and bead work, ornamented sashes, leggins, moccasins, &c.; but all our efforts to get rid of the epaulets were unavailing, as he considered he was making a great sacrifice in giving up the hat, &c. He expressed himself much gratified with the likeness. We passed the remainder of the day pleasantly roaming about in the woods, securing many charming bits of scenery, and towards evening we packed up and started down the lake in company with the chief on our way home. As we paddled along the old chief amused us by singing Indian songs until Sebatis told me that he was the only man in the tribe who could give the war whoop of the Passamaquoddy's, and that he would do so if he were asked. The request was made; but as the chief did not make any reply we began to fear that he would not comply, when suddenly the echoes of the lake were awakened by the most unearthly yell, so loud that it could be heard at a great distance, and utterly baffling all description. It carried the mind back a hundred years, when instead of our peaceful party the lake was traversed by bands of painted braves, and the echoes were awakened by a series of yells such as the one we had just heard. Evidently "of the past the old man's thoughts were," as he sat in his canoe with downcast eyes and his head bent forward on his breast.

Borne by the evening breeze from the distant shores of the lake come the tinkling of bells and the lowing of herds, telling of that civilization before which his race is passing away, so fast that in all probability in a few short years they will be numbered with the things that were. About three hundred souls are all that remain of this remnant of a once powerful community. The old man will sing no more to-night. As we scan the beautiful lake, reflecting so powertully in its glassy waters the hills now gilded by the setting sun, we almost fail to recognize it as the scene of our boisterous passage two days ago. Presently our landing place is reached, and as we disembark, highly delighted with our summer holiday, and bearing with us to the toil and drudgery of our every-day life the belief that all those who make the search will never fail to find "tongues in trees, books in the running brooks, sermons in stones, and good in everything."

PASSAMAQUODDY.

*It may be here remarked that in these waters you cannot have a fly too gaudy. The most killing fly we used was constructed as follows: Body, red and black pig's wool, ribbed with gold; legs, red hackle; wings, the scarlet feathers from a parrot's tail mixed with the feathers from the back of the wood duck; this, with the red and black palmers and the mealy white fly for night fishing are the only flies we found necessary. When these do not take you may often exhaust your book without bringing a fish up.

—It is proposed to make use of carrier pigeons to convey news of wrecks from lightships to the shore.

For Forest and Stream.

A TRIO OF LOST ANGLERS.

SOME twenty years ago, three of us left Williamstown (up among the Berkshire hills) at daylight, one fresh clear summer morning, bound for the forest region of Vermont, on a trouting expedition. F. was a young Dominie, and as enthusiastic an angler, as even good Dr Bethune R., who was enjoying his college vacation, was a persistent experienced trouter; and last, this deponent. There was little prospect for fly fishing, most of the streams being so much overgrown, as to render casting an impossibility; but we were not fastidious, our object was to "get out doors," and have a tramp, and that we *did*. The ride was an unqualified pleasure, as our span of free-going horses bounded rapidly along through villages, till we entered a more primitive district, where partly cleared farms, and stump fences abounded, and this being the end of our drive, we pulled up in a barn yard, and were greeted by a sullen growl from a grippy looking bulldog, whose jaws bristled with quills gathered in his recent worrying of a hedgehog. Being thus "treed," we shouted "Hallo the house," and the proprietor at last broke cover. Our first question was, "Will the dog bite?" the answer, laconic enough. "Bite? Yaas. What dy'e want?" Slowly the old codger sauntered toward us, and calling his dog, began pulling out the quills. After much catechizing, we were permitted to "come down," put up the horses, and get them a bite of hay. This done, and having received some chary instructions as to the stream, we rigged up our tackle, and leaving behind all superfluous clothing, were soon tramping across the clearing, finding the brook without difficulty, and getting fairly to work. The trout proved numerous, but small. So we pushed on in quest of some of greater size, our instructions being to fish down till we came to where another stream came in, and then follow up the other, and it would bring us out near the starting point. This seemed plain, but it was shown by the sequel, how easy it is for anglers to err through haste, and overconfidence. The fish were so unsophisticated, that one of us actually caught a decent-sized trout from between the straddling legs of the man next ahead.

It was towards noon, that, after passing through a very disagreeable alder swamp, we struck what we took to be the stream, which we were to follow up, and then observed that the sky was obscured by mist-send, the atmosphere had an increasing chill, and the wind was sighing for stormy weather. Counting upon reaching the farm house for a late lunch we had brought no provisions. Creeks full of trout, but no matches; clothes wet to the waist in the swamp; no drink but water; only small pocket-knives with which to cut wood for shelter, and no compass. It was in this condition, that a little later, we ran the brook right into a spring in the mountain side, and it became apparent that we were astray in our reckoning. At first we were only amused at the mishap and supposed we could readily retrace our steps for a little, and strike the right track; but viewed from a different side, everything appeared strange; and thus we wandered about the dense woods, stumbling over logs, and climbing through windfalls, till near six o'clock, when we came across an old bark road, and following it, emerged on the turnpike, three as weary fellows as ever got into a fishing scrape. Near by was the cabin of a charcoal burner, and the hot tea with biscuits, there obtained, will not soon be forgotten.

It has been easy enough since to decide that our protracted tramp was unnecessary, and that we might have put in practice some of the simple and shrewd devices, by which those skilled in woodcraft, determine their whereabouts, and point of exit, but, although neither of us lacked ordinary grit, or discernment, the great fatigue, want of food, and natural anxiety, doubtless tended to confuse; at all events this deponent then learned not to go upon any such expedition, without proper supplies and a guide.

Fish Culture.

PARASITES ON TROUT.—The following correspondence will be of interest to many of our readers besides those more directly concerned, and has been sent to us by Seth Green for publication:—

AMSTERDAM, N. Y., July 14th, 1874.

MR. SETH GREEN:—

DEAR SIR.—I am doing a little in raising brook trout; have a private pond of brook water; artificial pond; water from two to thirteen feet deep. Put in some yearlings in the fall of 1873. They have done finely till now. I find a few dead fish floating upon the water; they seem to be attacked by something that destroys the fins and tails; a sort of a scurvey. To-day I found four fine ones floating, and fastened upon the tail of one of them a very curious green bug about the size of a pumpkin seed; long legs, red eyes and a long stinger, at least three eighths of an inch long. I am inclined to think it is the cause of the trouble. Can you give me any information in reference to it, or any cause for it, or tell me where it is treated of in any book upon the subject? I have the monster safe in a bottle and shall watch him curiously. If you can give me any information I shall be glad to have it, or if you have any book upon the subject would be pleased to get it.

I am Truly Yours, E. D. BRONSON.

ROCHESTER, July 19th, 1876.

E. D. BRONSON, ESQ.—

DEAR SIR:—I never have seen trout die in exactly the same way, by having their fins eaten off. I have no doubt but that you have one of the insects that has done it. The cause is that you have no quick running water like a creek, with gravel bottom running in your pond. By having such a place when any insect is fastened on a trout he will go to the quick running water and will soon run it off. Putting trout in a pond with mud and weedy bottom that contains water insects, and no stream flowing into it, is like tying a man's hands and placing him where there are plenty of mosquitoes, gnats and black flies. The running water and gravelly bottom answer the same purpose in keeping the trout free from insects as our hands do in keeping the mosquitoes from us.

Yurs truly,
SETH GREEN.

SHAD IN THE SUSQUEHANNA.—A correspondent in whom we have every confidence, writes us regarding the catch of shad in the Susquehanna the past season. From his letter we extract the following:—

"Summering" near Newport, on the Juniata, I came across an old fisherman, and asked about the shad catch this year. He replied that a friend of his, one of the oldest fishermen on the river, had been down to "Haverdy" (meaning Havre de Grace, at the mouth of the Susquehanna), and reported this season to be the meanest in the memory of the oldest fisherman. He could not explain: it was simply "so, and that's all." "Then," said I, "you folks above the fishway must have come out very slim." "Well, now," said he, "it warn't so dreadful bad after all;; we must have caught here nigh onto 500 shad; and if them cusses at Columby that fishes right *at* the fishway would 'a give us half a chance, we might 'a done better." But they sweep their seines in front of the fishway back and forred the whole blessed time, night and day, and the Legislater won't pass no laws agin it, 'cause they've got so many votes. I believe in my heart the fishways would let considerable shad up if they were watched proper. If there had been any kind of run this year we would 'a done right well."

FISH CULTURE ON THE CONNECTICUT RIVER.—The efforts at increasing the shad in the Connecticut River for the last few years, under the direction of Fish Commissioners of different States, are watched with interest along the river. There has been a gradual increase of shad in the river since the Commissioners commenced their labors. This year the work at Holyoke, or South Hadley, has been impeded by the hot weather. The Springfield *Union* says: —"This extremely warm weather, unless it soon lets up considerably, will spoil the prospects of the Fish Commissioners at the shad hatching grounds, and the whole work will have to be put over to another season, for the temperature of the water has now risen to 87 and 88 degrees. Professor Hager and Captain Smith have tried the experiment of turning in a brook under their boxes, but the cold water ran at the bottom, not running with the river at the top till dissipated. Operations must wait for rains, bringing higher and cooler water. One of the shad recently taken presented the appearance and the symptoms of having been sunstruck, as the spawn were coagulated and dead. The fish had probably lain in too shallow water and been sunstruck. No hatching of any account has been done for some days."

VON G.

CULTIVATING CARP IN CONDENSED WATER.—An exchange says:—

An important suggestion has lately been made in regard to the utilization of certain waters in the cultivation of fish hitherto supposed to be unavailable. The articles refers to certain ponds along the Rhine, connected with a variety of manufacturing establishments, which are intended to receive the water condensed by steam engines. One of these ponds is 120 feet in length, with a depth at the sides of four feet, running down to sixteen feet in the centre, and is supplemented by the dike which runs around three sides of the manufacturing establishment. This dike in the aggregate is about 1,600 feet long by twelve feet wide and six feet deep in the middle. The entire water area is about 24,000 feet, with a depth of six feet in the dike, and sixteen feet in the centre of pond. The dike and pond are simply excavated out of the earth, and are neither bricked nor cemented. They are simply made to carry away surplus condensed water, which runs into the pond at 110 degrees Fahrenheit. The temperature of the pond just where the water runs in is about ninety degrees, and the coolest part seventy-six degrees Fahrenheit. Three hundred carp about five inches in length were introduced seven years ago, and now the young can be seen all the year round. Fish weighing four to five pounds are quite common, and one hundred pounds may be easily taken in an hour. Goldfish also thrive excellently in the water. It appears that the fish like best to be where the water is warmest, especially the younger ones. The locality referred to is near Bonn, on the Rhine.

Natural History.

CHARGES AGAINST THE CROW.

OUR most careful ornithologists cannot agree as to the habits of this interesting bird, and differ more especially in regard to its diet, perhaps, than upon any other point. But by a discussion through the columns of FOREST AND STREAM, definite conclusions may possibly be arrived at in a short time, if careful observers of birds in different parts of the country will contribute their observations. The habits of the crow very probably differ materially in different localities. The notes given below are confined to its habits in New York and New England.

In the Eastern States the crow is very abundant, and a resident during the entire year. Only a few, however, remain through the winter, the greater part of them moving farther south in large flocks on the approach of cold weather, but returning again in March and April. Soon after arriving the flocks separate into pairs which immediately prepare for nesting. About the first of April the nest is begun. This is a large structure composed of sticks and weeds, and lined with fine roots, moss, or cedar bark. It is placed in the top of a tall pine, or in a small deciduous tree, usually in the woods. On one occasion I found a nest in a small scrubby pine about fifteen feet in height, growing in a swamp. This tree was the only one in sight for some distance around and the nest could have been seen from a great distance. Another nest not far from this was only nine feet from the ground, but in a dense thicket. These two cases were rather exceptional as the nest is usually placed from twenty five to seventy five feet from the ground. Frequently an old nest is repaired and used for several years in succession, instead of a new one being built. In the early part of the season the nests are often placed in small deciduous trees and are very conspicuous, as there are then no leaves to afford any concealment. Those built later are placed in high thick pines. I have noticed this as being almost a rule in some localities, although it would seem more natural it were reversed.

Carrion is always acceptable to the crow, as food; even

when other food is in abundance. In the winter and early spring most of the crows resort to the sea shore, and find bountiful provender in the small shell-fish and mollusks cast ashore by the waves or left bare on the mud at ebb tide; they soon grow very fat. Those inland, however, do not fare so well, subsisting chiefly on seeds of weeds and a very few torpid insects which they find under the loose bark of trees, or hidden in the crevices of rocks. As the season advances and all have gone inland and are nesting, their food consists of a few field mice, seeds and acorns which latter are broken in pieces before being swallowed. By the time the young crows are hatched the smaller birds are nesting, and it is at this season that the crow is most destructive. The eggs and young of the smaller birds are appropriated by it on every opportunity for at least two months in the year, so that the number of eggs and young birds required to feed a pair of crows and their four or five young for this time would be by no means inconsiderable. I have known a pair of crows to destroy the young in three robins' nests in one day, and it is safe to say that each one of the young robins would in one year have destroyed more injurious insects than the crows would in their lifetime. Frogs, small reptiles, and the farmer's sprouting corn also form a large part of their diet at this season. Later in the summer they destroy great numbers of grasshoppers and crickets, but in this part of the country the grasshoppers are not plentiful enough to prove injurious to the crops. I have seldom found any really injurious insects in their stomachs, and on the whole their usefulness in destroying insects is so small as to be not worthy of notice, as compared with their great destructiveness.

In the autumn the crows, old and young, assemble in flocks and visit old corn and stubble fields for the scattered grains which they find there, and the meadows and swamps for grasshoppers, seeds, nuts, and frogs. At the approach of winter they move southward, with the exception of a few stragglers which prefer to remain.

ROBERT T. MORRIS.

BIRDS OF LOWER MICHIGAN.

BY A. B. COVERT, OF ANN ARBOR.

(*Continued from Page* 354.)

Ectopistes migratorius. Wild pigeon. A very common spring and autumn visitor, passing here in the spring from the last of March to the middle of April, and returning in October and November. A few remain and nest nearly every season about the 20th of May. Thousands remained through the nesting season in 1873.

Zenædura carolinensis. Carolina, or mourning dove. Common resident. The eggs are laid about May 5th.

Meleagris gallopavo. Wild turkey. Resident and common in some localities, but very rare in this vicinity.

Cupidonia cupido. Pinnated gronse; prairie hen. Abundant all the year in localities twenty miles from Ann Arbor. Hundreds incubate about May 1st, but they are rapidly becoming exterminated.

Bonasa umbellus. Ruffed grouse or partridge. Very common. The eggs are laid about May 5th. During the breeding season the males congregate together and remain apart from the females until the young birds are nearly full-grown, when they join them until the ensuing spring.

Ortyx virginianus. Quail, or bob-white. Abundant always. The eggs are laid about May 10th. I think this bird sometimes raises two broods in the season, for August 7th, 1841, I found a nest of twelve fresh eggs.

Charadrius fulvus var. *virginicus.* American golden plover. A rare visitor during spring and fall migrations.

Ægialitis vociferus. Killdeer plover. Very common, arriving by April 1st, and laying its eggs about June 1st, and departing for the South about the middle of October.

Ægialitis semipalmatus. Semipalmated, or king plover. Common in the spring and fall migrations.

Steganopus Wilsoni. Wilson's phalarope. Rare. One nest found was at Portage Lake (twenty-six miles north of Ann Arbor) July 2d, 1875, and both male and female were obtained.

Lobipes hyperboreus. Northern phalarope. Rare spring and fall immigrant, arriving May 1st.

Philohela minor. Woodcock. Very common, arriving here by April 1st, nesting about May 1st, and departing south in November.

Scolopax rusticola. European woodcock. A straggler from Europe, one specimen having been obtained May 9th, 1870, by Dr. William E. Lewitt.

Gallinago Wilsoni. American snipe. A common spring and fall migrant, passing northward by April 1st, and returning in September.

Macrorhampus griseus. Red-breasted snipe, or gray snipe. Common spring and fall migrant, arriving by March 15th and passing here on their return south about the last of September.

Ereunetes pusillus. Semipalmated sandpiper. Rare migrant in spring and fall, passing here in the spring about May 10th.

Tringa minutilla. Least sandpiper. Very common during the migrations, about the first week in May and the first week in October.

Tringa maculata. Pectoral sandpiper; jack snipe; grass snipe. Rather common during the migrations, coming to us in the spring by the last of April, and passing quickly to the north whence it returns in October.

Tringa canutus. Red-breasted sandpiper; ash-colored sandpiper; robin snipe. Migratory and rare, arriving here about May 10th, and soon passing to the north to breed.

Totanus semipalmatus. Willet or stone snipe. Rare; arrives here by the last of April and breeds about May 25th. By the middle of October all are gone south.

Totanus melanoleucus. Greater telltale or yellow-shanks. Common, arriving by the middle of April. This bird undoubtedly nests in this vicinity, as I have taken it from April to October when it returns to the south.

Totanus flavipes. Lesser telltale or lesser yellow shanks. Common and can always be found with the preceeding.

Totanus solitarius. Solitary sandpiper. Very rare. One pair of birds with their eggs are all that I have ever taken. These were found near a stagnant pond on the outskirts of deep woods, May 19th, 1870.

Tringoides macularius. Spotted sandpiper. Very common after the first week in April. The eggs are laid by May 1st, and it departs south by the last of September.

Actiturus Bartramius. Bartramian sandpiper; upland plover. Very common, arriving in pairs about the middle of April. The eggs are laid by the 1st of May.

Numenius longirostris. Long-billed curlew. A very rare migrant, but is sometimes obtained in autumn.

BIRDS OF CENTRAL NEW YORK.

[*Continued from page* 337.]

Corvus americanus. Crow. Abundant all the year.

Cyanurus cristatus. Blue-jay. Resident but not common.

Tyrannus carolinensis. King-bird. An abundant summer resident after May 1st. Breeds, and migrates in September.

Myiarchus crinitus. Great-crested flycatcher. Not an uncommon summer sojourner, arriving the second week in May. Breeds.

Sayornis fuscus. Phœbe-bird. Common after the second week in March; builds its nest under bridges, etc.; departs in September.

Contopus virens. Wood pewee. Common in summer after the second week in May.

Antrostomus vociferus. Whippoorwill. A rare summer resident; breeds.

Chordeiles virginianus. Nighthawk. Common in summer, breeding.

Chætura pelasgia. Chimney swift. An abundant summer resident, arriving in May. It departs in August, after raising a brood.

Trochilus colubris. Ruby-throated humming-bird. Common from May to September, and breeds.

Ceryle alcyon. Kingfisher. Present in summer, and breeds. Arrives about April 1st, and departs in October.

Coccyzus erythrophthalmus. Black-billed cuckoo. Not uncommon from the first week in May until September.

Coccyzus americanus. Yellow-billed cuckoo. An irregular summer visitor, breeding. H. G. FOWLER.

CORRECTION.—In the article "Birds of our Suburbs," printed last week, two errors of consequence occurred. Under May 17th for "wood pewee" read purple finch; and under May 21st for *Ardea egretta* read *Ardetta exilis.*

WHEELER'S "BIRDS."—By far the most elegant work which has appeared in this country upon ornithology since the publication of the Pacific Railroad Reports, and perhaps surpassing them in the beauty of the plates, is Chap. III, Vol. V of the Reports of the United States Geographical Surveys West of the 100th Meridian under Lieut. Geo. M. Wheeler. It is the result of the labors of Mr. H. W. Henshaw, is quarto, contains 1,000 pages, describes 296 species, and is furnished with fifteen splendid plates of recently discovered southwestern birds. It is a credit to the indefatigable and learned author and to the government which prints it.

HABITS OF THE MOLE.—We do not know who is the author of the following plea which is excellent:—

The Mole is another much-abused animal. He is generally believed to be a vegetarian, but, on the contrary, he is carnivorous, living upon the larva or grubs of winged insects, or upon insects whose proper habitat is in the earth. We have never detected a mole eating a plant; but in every case where the plant has been under-run by the mole and consequently wilted, we have found that its roots had been previously eaten off by the larva of the cockchafer (June bug), or by some other insect. Friends in the country, whom we have visited during the summer, complained of the havoc made by moles in a large bed of young lilies. On examination we found scores of the shoots of the lilies wilting and dying on the rows, which had been under-run by the moles. These shoots were found gnawed off, and in a manner to indicate, beyond doubt, that they were destroyed by the grub or the larva of the cockchafer and not by the moles. The bulbs, planted six or more inches deep were untouched, and the burrows of the moles were not more than three or four inches below the surface of the soil. Searching in other parts of the bed we found grubs busily at work—the beds, part of a freshly turned-under piece of grass land, being full of them, as such land is always sure to be.

The mole, by burrowing about in our gardens in search of his food, often does mischief by running under small, freshly set-out plants; but we have the choice of two evils—the bearing with the small amount of mischief he does or clearing the far greater annoyance and injury produced by grubs and worms. His presence is a sure sign that our gardens are, or have been, infested with these. The accusation that he is a vegetable eater is a curious instance of jumping at conclusions, and of the making of reliable evidence out of mere coincidences. Because plants are found gnawed through and die when over his burrow, it is concluded that he is the cause, whereas he was only destroying the destroyer—rendering a service instead of doing an injury.

REMAINS OF SHINNECOCK INDIANS

GOOD GROUND, L. I., July 17th.

EDITOR FOREST AND STREAM:—

Shinnecock village, at the eastern end of the bay of that name, is always an attractive place to us. There is a remnant of the Shinnecock tribe still living there. The whites have encroached upon them until they have only six or seven hundred acres left of their original reservation of over 4,000 acres. The tribe has dwindled down to about two hundred members. They have adopted our mode of living, and have some very pleasant houses well shaded by a variety of trees with fruit and flowers. They have well-tilled farms, but the majority of the young men follow the sea, several being captains. All of the tribe we have met are pleasant, kindly, intelligent people. The great event of the past week has been the opening of the grave of one of their ancient chieftains. There was a misunderstanding regarding permission to open the grave, and the gentleman at whose request it was done has returned the relics found to one of the trustees of the tribe to await their final decision regarding their disposal. To the kindness of Mr. B. (the trustee in charge) we are indebted for an inspection of the relics. One is a gun, the barrel of which must originally have measured from six to eight feet in length; has been bent, carving several inches at the muzzle. Whether it was a flint-lock we could not decide, as the stock was entirely gone. One of the rings that originally held the stock, was large enough to encircle a man's wrist. There were also five coarse green glass flagons, ranging from three inches to eight or ten inches in height. All were round at the base with long slender necks. Other articles were a common yellow earthen pitcher; a white earthen cup or mug with handle; a round copper box of very ingenious workmanship, about four inches in diameter, and one inch in depth, on the cover of which were raised figures of the sun, moon, and two arrows. This box held old silver coins that had evidently been hammered. On one we deciphered the date "1670," and on another "Philipus." They were evident old Spanish coins. There were also found a stone pestle for pounding corn, buttons and shell beads; such metal ornaments as Indians use on their scalping-knife sheaths; three silver spoons of peculiar shape, the bowls nearly round and fully two inches across, with slim round handles about five inches long, ornamented at the top; and fragments of a blanket. Most of the relics were evidently of European manufacture. There is no possibility that the tribe will present these relics to the Long Island Historical Society.

Mr. B. told us that the tribe held traditions that in ancient times their dead were buried standing, with their treasures beside them; while some believe they were horned in a sitting posture. At different times he has plowed up various relics, stone implements, etc.; also a stone image,—a figure of a woman sitting. It was four or five inches high, by three inches across the front and one inch and a half in thickness. It is supposed to have been connected with their religious faith. HARRIE.

MORE ABOUT THE PRAIRIE DOG.

SALEM, Mass., July 17th.

EDITOR FOREST AND STREAM:—

I copy the following extract relative to the prairie dog, about which I saw an account in your issue of July 13th, from an editorial article in *Beadle's Monthly* for 1866, thinking that some additional facts as to their barking in captivity would be interesting:—

"Its bark is a short, yelping sound, which it is fond of uttering, and which bears every resemblance to the bark of a young puppy. Even in captivity it utters this short impatient yelp, which may generally be extorted from the little animal by placing the hand near the cage. Though gentle and affectionate to its keeper, it dislikes strangers; and if their fingers approach the bars of its house too closely it barks at intruders like an angry squirrel, and scratches smartly at their hands with its sharp and powerful claws." TEAL.

ARRIVALS AT THE CENTRAL PARK MENAGERIE, JULY 15 TO JULY 22.—Two tigers (*Felis tigris*), one sociable vulture (*Vultur auricularis*), one pair crow blackbirds (*Quiscalus purpureus*), presented by Mr. Edwin Oliver, Little Falls, N. Y.; one caracara (*Crax alector*), presented by Mr. Leonard H. Conant, N. Y.; one black snake (*Bascanion constrictor*), presented by Mr. E. B. Hunt, Nyack, N. Y.; one terrapin (*Emys palustris*), presented by Mr. George L. Cross, New Orleans; two leopards (*Felis leopardus*) and one fallow deer (*Cervus dama*) born in the Menagerie. W. A. CONKLIN, Director.

Sea and River Fishing.

FISH IN SEASON IN JULY.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Serranus acutilus.*
Salmon, *Salmo salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confinis.*	
Land-locked Salmon, *Salmo Gloveri.*	Striped Bass, *Roccus lineatus.*
Grayling, *Thymallus tricolor.*	White Perch, *Morone americana.*
Black Bass, *Micropterus salmoides; M. nigricans.*	Weak-fish, *Cynoscion regalis.*
	Bluefish, *Pomatomus saltatrix.*
Muscalonge, *Esox nobilior.*	Spanish Mackerel, *Cybium maculatum*
Pike or Pickerel, *Esox lucius.*	
Yellow Perch, *Perca flavescens.*	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	King-fish, *Menticirrus nebulosus.*

TROUT FLIES FOR AUGUST AND SEPTEMBER.

GRAY COFLIN, No. 10 AND 12.—Body, silver-gray mohair tipped with orange silk; feet, light gray hackle wound over peacock's heel; wings and setæ, hyaline.

BROWN COFLIN, No. 10 AND 12.—Body, gray and bright claret mohair mixed; feet, dark gray hackle wound over peacock's heel; wings and setæ, gray hyaline.

The gnat flies named for April.

The Quaker for evening and moonlight. No. 7 and 8. Body, gray wound with honey-yellow hackles; wings, made of feather from an owl's wing

The white moth, for dark nights, No. 6 and 7. Body, feet and wings a pure white.

The stone flies continue on the water until the close of the season.

At this season use the small flies for day fishing, and the large flies for evening and night.

FISH IN MARKET.—Our quotations for the week are as follows: Striped bass, 16 to 20 cents per pound; bluefish, 8 cents; salmon, 35 cents; mackerel, 18 cents each; weakfish, 10 cents per pound; white perch, 15 cents; Spanish mackerel, 25 to 50 cents; green turtle, 10 cents; terrapin, $12 per dozen; halibut, 15 cents per pound; haddock, 8 cents; kingfish, 25 cents; codfish, 8 cents; blackfish, 12½ cents; flounders, 10 cents; porgies, 10 cents; sea bass, 15 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 15 cents; salmon trout, 15 cents; brook trout, $1; soft clams, 30 to 60 cents per 100.

CONNECTICUT.—*Niantic, July 21st.*—Striped bass fishing is very dull here; in fact we have no luck at all. Can you give us a bait or even an idea what to use. Minnows, eels, bony fish, have been tried with but little success. Old fishermen about here say it is the hot sun and clear water, the former making the fish lazy, and the latter, even when hungry, allowing him to see the line, thereby scaring him off. I know nothing about these various theories, and place but little faith in them, yet it is a fact that all our fish are caught at night. After many trials small sized eels I conclude are the best bait; at any rate, we have had better luck with them than any thing else. If you can only put me on a bait, I will promise a good mess of fish, besides my most hearty thanks; they are here, and at slack water one can see plenty of them, which fact only makes us more impatient and anxious. SCALES.

The old fishermen are right, and it is the hot sun and clear water which prevents the fish from biting. Among your list of baits tried, you have not enumerated either shrimp, shedder-crab, or sand worms; the latter is now considered the most taking bait for striped bass.—ED.

Meriden, June 24th.—At Holyoke on Tuesday evening, July 18th, a lamprey eel was caught in the Connecticut River that weighed 14½ pounds, and was five feet long

The fishermen at Mystic are now reaping a harvest of fat mossbunkers. Allyn & Co. hauled 1,600,000 last week, and 500,000 on Monday of this week. L. Wilcot & Co. also did well last week, Capt. Elias F. Wilcot alone taking 535,000 between Monday morning and Friday night. Plenty of bluefish of small size can now be found off Hartford and around Yellow Mill bridge, Bridgeport. A boy caught 103 in Yellow Mill Pond on Friday. Crabs, too, are said to be plenty.

NEW YORK.—*Frontier House, Henderson Harbor, Jefferson Co., N. Y., July 9th.*—I have just arrived, and find that I have struck another good place. Bass fishing is excellent. W. H. Phillips, of Philadelphia, came in just after my arrival with a string that opened my eyes, *fifty seven* good bass, thirteen of which averaged three pounds; caught since 3 P. M. His boatman came up dragging a string over two yards long, solid meat. They take dark flies and minnows, wont touch spoon. PISECO.

Henderson Harbor, July 24th.—Fishing continues good here. I caught in two hours before breakfast yesterday, five three pounder bass, besides small ones. PISECO.

Alexandria Bay, July 16th.—I have been having glorious sport with the bass ever since I struck the St. Lawrence at Cape Vincent. At Clayton I took 25 bass inside of two hours, casting for them as you would for trout or salmon. I have been using a team of gaudy flies tied on No. 2 Limerick hooks, which are quite large enough. At this particular season there are millions of eel flies floating on the surface. I am told the bass are now feeding on them, which materially lessens the attractions of the artificial fly.
J. B. MeH.

Syracuse, July 22d.—Small brook trout, in fact mere fingerlings, are daily sold here at forty cents a pound. I believe they are caught in the northern part of this State, or in Canada. SENECA.

MASSACHUSETTS.—Our Gloucester correspondent writes under date of July 19th:—

"The mackerel struck our harbor on Monday afternoon last, and as a consequence, have since been taken with the hook and net in large quantities. The fish, though invariably small, are abundantly proving an excellent dish for a breakfast, or other meal. The school first made its appearance directly off Pavilion Beach, and immediately after they were first discovered, boats of all kinds were in demand; soon, 'countless numbers' of different craft covered the sea, their occupants, each and all, 'striving earnestly' to obtain their respective shares. The fishing is somewhat lessened at the present writing, from the fact that the remainder of the school tends with great rapidity towards the neighboring bay. W."

NEW JERSEY—*Kinsey's Ashley House—Barnegat Inlet, July 24th.*—Fishing of all description has been very dull the past week, with the exception of one day. What few bluefish were taken would not weigh over one pound. Blackfish and sea bass fishing also poor. The professionals attribute the poor fishing to thick and warm water. We are looking for a return of the good fishing after the rain (now falling). N. D. Taylor and friends, in the yacht Plover, were among the arrivals this week. B.

PENNSYLVANIA—*Baden, July 18th.*—There has been a summer resort opened up on little Beaver at the mouth of the Conoquessing Creek called "Rock Point," where one can board, and there is good to middling black bass fishing. I took twenty in one day, not fishing in the heat of the day, although it is very cool in the creek. Artificial minnows are good, as the water is swift. There is some hunting there also, but the hill is so steep that one don't like it this warm weather. "JUMBLES."

—Black bass are said to be quite plentiful in the old canal reservoir above Hollidaysburg, 8 or 10 miles from Altoona, Pa., where they were planted three years ago.

CANADA.—*Quebec, July 21st.*—Notwithstanding the high water in the early part of the season, angling on the salmon rivers has been satisfactory upon the whole. Allan Gilmour's party have just returned from the Godbout, on the north shore of the St. Lawrence, and have left for the season. The Godbout is a *three* rod river—a larger party than *three* take the river in turn—400 to 500 is the usual bag, exclusive of grilse. This year up to the middle of July, over 200 salmon were killed, but the fishing will be good for two weeks longer. The high water has up to this time somewhat diminished the take. For many years a register has been kept of the salmon killed, each fish, at the end of the day, being weighed and entered. You have published some of these in previous seasons. The river Moisie, also on the north shore, is being fished by Hamilton gentlemen. The York river on the south shore (Gaspe), has yielded 120 fish to the rods of Messrs. Reynolds and Middleton, the first named having just returned. Walter Brackett, of Boston, Mr. Strong of Brooklyn, and Mr. Hoyt, of California, are on the Marguerite, a branch of the Saguenay, the river being owned by Mr. Willis Russell, of the St. Louis Hotel, Quebec, and Robert Hare Powell, of Philadelphia, the latter being now at his summer residence at Tadousac. By the way, Mr. Russell, who reserves his river for his guests, has recently put up six cottages with every comfort for lodging, where gentlemen can take their families and servants, and sojourn as long as they will. The accommodations thus supplied will be appreciated by anglers who have suffered inconveniences that have hitherto been regarded as inseparable from salmon fishing in America. Andrew Clerk has been for several weeks on the Grand river, and has been joined this week by Messrs. Imbrie and Bruce, the former being of the firm of Abbey & Imbrie, Maiden Lane, N. Y. Mr. Whitcher, of Ottawa, Messrs. Page and Purcell, of New York, and others, are on the Restigouche. Mr. Fred. Curtis, of Boston, on the Dartmouth. The river Jacques Cartier, which contains some good fish, is now in the hands of ten Montrealers, of whom Mr. Ivan Wotherspoon, is one. Manasseh Smith, of Portland, is in town. T. C. Clarke, of Philadelphia, was here yesterday, and is said to be in quest of salmon. J. U. Gregory, Naval Agent of this port, is fishing one of the Gaspe rivers. I shall visit the New Brunswick rivers this week, and send additional reports. HAL.

RANGELEY LAKES, *July 25th.*—The Executive Committee of the Oquossoc Angling Association have voted to admit persons not members to Camp Kennebago, Rangeley, Maine, until September 10th, without special application to the superintendent or a member, at very reasonable charges, and with all the advantages of members. After Sept. 10th admission to the camp must be had through a member. The fishing has been very good this season; many trout weighing from two to seven pounds have been taken—also several land-locked salmon of from one pound to two pounds weight.

—The intense heat during the past two or three weeks has occasioned the fish in the Delaware to forsake the warm shallow water, and lie in the deep and cooler waters of the channel. Fishing with rod and line near the shore has consequently been very unsatisfactory, many who have used the deep sea have had poor success. Mr. Horace F. Whitman, of this city, informs us that he had an excellent catch the other day off Bomb creek below the Lazarett. He and a companion took with deepseas thirteen dozen fish in a half day, including a number of white catfish weighing over two pounds each, and many perch of unusual size. They commenced fishing at high tide in about twelve feet of water, using the ordinary ground worm for bait.—*Germantown Telegraph.*

FISHING MOVEMENTS.—The number of fishing arrivals reported at this port the past week has been 70 viz., 13 from the Banks, 35 from Georges, and 22 from mackereling cruises off shore. The receipts for have been 1,175,000 pounds codfish, 178,000 pounds of halibut, and 4,978 bbls. of mackerel. The market is fairly active for the season, and the shipments continue large.—*Cape Ann Advertiser. July 22d.*

BASS FISHING IN ALABAMA.

HUNTSVILLE, Ala., July 11th.

EDITOR FOREST AND STREAM:—

On the 16th of June, having occasion to go to Guntersville, Ala., on business, I determined to also have some fun fishing in Short Creek. We found the Tennessee there very high, and I was satisfied my fishing would not prove as successful as I had anticipated. On Wednesday, the 21st inst., in company with a friend, I started for Short Creek. We rowed three miles against a swift current, to the mouth of the creek, and thence in slack water four miles up the creek to a mill dam, to which point the water had backed up, being within two or three inches of the top of the dam. We had to catch minnows with hook and line and to get a supply before trying the bass. As soon as I threw my line in just below the dam in the rippling water a bass struck it, and in a little while I used up all my minnows, catching a bass every time, and sometimes two with one minnow—of course not at the same time. I then fished with one hand above the dam for minnows, and the other below it for bass, and caught in all five bass. The largest was thirteen inches long and weighed one pound. I tried a spoon but without success; then I tried a fly and had a rise just as the fly touched the water, but failed to hook him, and could not succeed in getting another rise. We returned to camp, reaching there about 7:30 with our seven fish, which only weighed four pounds—rather light weight. The next day three of us went up, one of the three taking a "dug-out" canoe, or as the natives called it, a "cooner." It is light, easy to paddle, and very convenient for one man, enabling him to avoid the swift water when going up stream by keeping close to the banks, and also to glide noiselessly to the holes haunted by the bass, and to cast his line exactly where he wants it. The water had fallen some eighteen inches or two feet, and the appearance of the stream promised better results than the day previous. All three of us caught with minnows ten bass that day. The "cooner" man caught five, and one of them a five-pounder. The next day we caught nine, two of which were five-pounders, which measured 19½ and 19 inches. We noticed a good many "trout flies"(?). These flies make their appearance about the last of June and first of July. Last summer some of my party caught bass and minnows with them. They caught more minnows with them. I have seen trees so black with them that it was hard to see the leaves, and the surface of the small creeks was covered with them. I presume that in season they are excellent bait, and they look to me as if they would be first-rate bait for mountain trout. I prefer a live minnow to anything else, and of the minnows I prefer a long, narrow, shining fellow—a "silver-roller," or the like. Bass will bite at perch. The two five-pounders we caught were both caught with perch four or five inches long. The bass is very voracious, and my impression is that it will take any sort of fly or beetle in one, and also two small fish. I was struck with the difference in the markings of the fish we caught. Some of them were mottled with black spots, while others were entirely without spots. The large ones had no spots on them, and the body color was different from the body color of the spotted ones. I saw a number of young ducks, some very small, not over a week old, and others full grown. They call them here summer ducks. W. G. W.

National Pastimes.

THE CALEDONIAN CONVENTION.

When the Caledonian "sachems" were in council last year in Toronto they resolved, on account of the Centennial interest centering at Philadelphia, to hold in that city the seventh annual convention of the North American United Caledonian Association. On the sixteenth of next month the Caledonian convention will accordingly meet in the Quaker City. The games of the local club, given under the auspices of the Association, and invariably attending its annual assembly, will be held on the two previous days. The business to be brought before the convention on notices of motions given at last meeting may be briefly summarized: A committee will report upon a system of Life Assurance, suited to the peculiar wants of members of affiliated clubs; a motion will be discussed to the effect, that the results of the election of officers in each club be immediately communicated to all the affiliated clubs; a committee will report upon the by-law in refereuce to quoiting; a proposal will be discussed to change the weights of the hammers from twelve and sixteen pounds to fourteen and twenty-one pounds respectively; a motion will be debated making it compulsory upon clubs to choose the judges at their games on the day of the games from persons not belonging to the club, the subject of representing clubs at the convention individually, and not according to numerical strength as at present, will be argued; and the imposition upon all affiliated clubs of the duty of ascertaining, in reference to candidates for membership, if they have previously belonged to another affiliated club, and in such case requiring the production of a clearance card as a condition of admission, will also be argued. These are the innovations of which notice was given at Toronto, and the matters theu brought forward upon which reports will be presented.

Last July, some weeks previous to the convention, we pointed out that, although the by-laws prescribe the weights of the hammers and stones to be used at the games of affiliated clubs, a doubt existed whether the rules were observed. To remove any objection to existing usages upon that score, we suggested that these implements be weighed in the presence of the judges at every celebration of Highland games. To reach the same object the Association tried a different route. It adopted a report in which a recommendation was included that "the Association furnish all clubs in affiliation with regulation hammers and putting-stones, stamped by the Association, the clubs receiving the same to pay the cost thereof." With all deference to the gentlemen advancing and adopting this recommendation, we think it almost ridiculous. In the first place, the most strenuous opposition will, for financial reasons, certainly meet any attempt to put it in force. Clubs whose practice grounds are already sufficiently equipped cannot be expected to undergo any expense for a purely formal object. In the next place, the recommendation is quite unnecessary, and was evidently made under a misapprehension of the requirements of the case. Uniformity of weight is mainly desirable in order to facilitate comparison. After the absolute assurance of uniformity, a correct knowledge of the actual weights employed, is the next thing to be desired. We question if, in the hammers at least, any two thrown at the games of two different clubs would be found exactly equal in weight. What is wanted, therefore, is a knowledge of the weights actually used, not so much for the purpose of testing their uniformity with the by-laws, as for that of showing the real extent of the competitor's ability. For this purpose, and as the possibility of a few ounces of difference in the weight of the handles is at present overlooked, the rule aught to state the weight of the hammer *and* handle, and require that it be tested by the judges. We also suggested the drawing up of a code of laws for the regulation of the quoitiug match, and the report of the committee will in all likelihood show that our suggestion has been acted upon.

We also pointed out last year that the extent of the Association's authority is not defined by the constitution. It is entirely a matter of inference. We alluded to the matter in order that the delegates to the convention might take warning and remedy the defect. At present the Association can only constitutionally regulate the games of its members. From the motions to be debated this year, it will be seen that according to the views of some of the delegates to Toronto, and presumably of the clubs they represented, it possesses a much wider authority. These motions, in at least two cases, have reference to the internal regulation of individual clubs. One imposes certain duties upon officers, and another dictates as to who shall be admitted members. There is no doubt that, under the present constitution, the Association cannot take cognizance of such matters. There *is* a doubt of the expediency of investing it with such a power. The matter should be definitely stated, or otherwise delegates will be continually in doubt as to the powers of the body which they compose, and will be everlastingly wasting its time with motions concerning matters, such as those above referred to, which are beyond its jurisdiction. A distinct definition should be embodied in the constitution of the power vested in the Association. The Secretary said last year that "in it is deposited the chief executive, judicial, and legislative power," but he unfortunately did not state whence that power is derived. We beg leave, in the meantime, and until the convention has revised the constitution, to question whether the Association has power to do any thing further than regulate the games of its members.

BASE BALL—THE PROFESSIONAL ARENA.

Great interest has been excited in base ball in the metropolis the past week by the statement that the strong team of the Hartford Club is to be transferred to Brooklyn next season under the combined management of Messrs. Buckley and Cammeyer. The new team will be made up from a selection from the existing Hartford and Mutual teams, giving Hart, Ferguson, Burdock, and Bond of the Atlantics as part of the team, and including also York, Treacy, Booth, Holdsworth, Casey, &c. Remsen goes to St. Louis, Mills to Louisville, and Hicks, Hallman, and Mathews, to Cincinnati. With a team of this strength and with Mr. Buckley at its head a new era would be introduced in the metropolis in professional base ball playing. Another new topic of interest is contained in the statement published in the *Herald* of July 23d to the effect that Mathews was made the subject of an effort at bribery at the hands of a noted pool seller of this city. If this is true one great source of "crooked" play will soon be got rid of.

A feature of the past week's play was the defeat of the Hartford nine by the Mutuals, July 22d, a result which enabled St. Louis to occupy second position on the pennant race as the appended record shows:—

CLUB.	Athletic.	Boston.	Chicago.	Cincinnati.	Hartford.	Louisville.	Mutual.	St. Louis.	Games won.
Athletic	..	1	1	4	0	1	3	0	11
Boston	4	..	2	1	0	4	3	3	19
Chicago	5	6	..	4	3	1	5	2	32
Cincinnati	2	0	0	..	1	0	2	2	6
Hartford	4	4	3	3	..	3	3	3	25
Louisville	4	0	3	1	1	..	3	1	13
Mutual	1	1	1	6	2	1	..	1	15
St. Louis	6	3	2	5	3	3	4	..	26
Games lost	26	19	7	32	10	23	21	12	150

It will be seen that while Chicago is largely in the van, St. Louis takes second place by 26 to 25 in won games.

—Among the model games since our last may be named the following:—

July 17.—Mutual vs. Buckeye, at Columbia..... 3 to 0
July 17.—St. Louis vs. New Haven, at St. Louis..... 6 to 2
July 17.—Hartford vs. Capital City, at Indianapolis..... 2 to 1
July 18.—Mutual vs. Allegheny, at Pittsburg..... 9 to 3
July 18.—Chicago vs. Louisville, at Chicago..... 9 to 5
July 18.—St. Louis vs. Cincinnati, at St. Louis..... 5 to 1
July 18.—St. Louis Reds vs. New Haven, at St. Louis..... 9 to 3
July 19.—St. Louis vs. New Haven, at St. Louis..... 2 to 1
July 19.—Mutual vs. Oakwood, at La Crosse..... 9 to 4
July 19.—Star vs. Standard, at Wheeling..... 9 to 6
July 19.—Hartford vs. Neshannock, at New Castle..... 5 to 3
July 20.—Boston vs. Mutuals, at Brooklyn..... 7 to 1
July 20.—St. Louis vs. Cincinnati, at St. Louis..... 9 to 1
July 20.—Rhode Island vs. Live Oak, at Providence..... 4 to 1
July 20.—Fall River vs. Lowell, at Fall River..... 7 to 1
July 20.—Capital City vs. New Haven, at Indianapolis..... 5 to 3
July 20.—Mutual vs. Lexington, at Lexington..... 9 to 4
July 21.—Hartford vs. Athletic, at Phila. (10 innings)..... 6 to 4
July 22.—Mutual vs. Hartford, at Brooklyn..... 7 to 3

ABSTRACT OF PEDIGREES OF FIRST 100 DOGS ENTERED IN THE KENNEL REGISTER.

—In Dr. Webb's article last week on surfeit mauges, the pill composed of iron, quinine, mercury and arsenic, should contain *Fowler's* solution of arsenic, and not powdered arsenic as made to read through error.

BISMARCK.—We shall publish next week a portrait and sketch of Mr. Brock's celebrated setter, Bismarck, recently smothered to death while being transported from the West to Philadelphia. Bismarck was so generally known, and is the sire of so many good dogs that his biography will be read with interest.

—Mr. J. J. Snellenburgh writes from New Brighton, Pa.: "Mr. George, Woodruff's black bitch, Dinah, pupped ten fine, healthy pups, four dogs and six gyps to my orange and white dog, Sam, on the 13th inst. Mr. Wm M. Boyle's black bitch, Daisy, has visited my orange and white dog, Sam. Daisy is out of J. W. Knox's imported Field Trial bitch, Dimple, sire, Theo. Gray's black dog, Don, and has proved herself a promising young bitch.

THE CENTENNIAL BENCH SHOW.—Certainly all sportsmen must admit that Mr. Burnet Landreth, in whose department the bench show is included, has done everything that could be done to meet their wishes. In addition to remitting any entrance fee and providing food for the dogs free of expense, it appears from the letter which we publish below, that exhibitors will be given all the privileges of the general exhibition without charge. It will be noted that the time for closing entries has been extended until August 10th, and we would suggest that intending exhibitors write to Mr. Lincoln for blank forms for entries without delay:—

"In addition to the entries being free for dogs, each exhibitor will receive a free ticket for all the exhibition buildings and grounds during the time their dogs are on exhibition. The Commission have decided to appoint five judges for the various classes (four American and one foreign), these five will select a Chairman and a Recording Secretary from among themselves, and then proceed to divide themselves among the classes they are most suitable for, and where any judge may find any difficulty in deciding he will be allowed to call in an expert to his assistance; each judge's decision will be required to be signed by all the five judges, thus preventing any collusion. This new departure will, I think, be favorably received by exhibitors, as the judges will have to be very careful, knowing that their decision will have to be certified to by the other four judges. The time of entry has been extended to the 10th of August, and it is very desirable to receive them as early as possible, so as to secure a good location. Parties desiring forms of entry can obtain them from this office. The classification of dogs will be the same as appeared in your paper of the 1st inst.

Applications have already been received from some of the most noted breeders of Irish setters in Ireland. It is expected that the setter classes will be one of the finest ever yet seen in this country.

I enclose you a full list of special prizes offered up to date and the classes they are given to. I would very much like to see the list increased, and hope some more sportsmen will contribute to the great Centennial Dog Show.

"CHAS. LINCOLN, Superintendent."

LIST OF SPECIAL PRIZES.

The Philadelphia Sportsmen's Club offers a silver bowl, value $100, for the best setter (dog or bitch) over one year old, in the show. Also a silver bowl, value $100, for the best pointer (dog or bitch) over one year old, any weight.

C. L. Wescott, Esq., 51 South Forty-second st., Philadelphia, offers a silver cup, value $50, for the second best English setter bitch over one year old.

Frank Roan, Esq., offers a silver cup, value $50, for the best imported setter.

John Kidder, Esq., offers a silver mounted dog whip for the best native setter.

The Chicago *Field* offers a silver cup for the best Irish setter dog over one year old.

FOREST AND STREAM offers a silver cup for the best Irish setter bitch over one year old.

Frank Roan, Esq., offers a silver dog collar for the best dachshund.

The Detroit Gun Club (Mich.) offers a silver cup, value $100, for the best setter dog or bitch over one year old, exhibited from the State of Michigan.

Chas. E. Tucker, Esq., offers a silver cup for the best cocker spaniel (dog or bitch).

[We understand that the special prizes of the Chicago *Field* and this paper are given for the best red Irish setter whether bred in this country or imported.—ED.]

KENNEL PRODUCE.—On the 29th inst. Mr. D. B. Fuller's liver and white pointer bitch, Queen, whelped six puppies, all liver and white, to Mr. W. L. Brock's imported dog, Bingo, five dogs and one gyp.

Mr. E. A. Herzberg's orange and white English setter bitch, Jessie, prize winner Springfield, 1876, which was mated with Mr. Charles H. Raymond's Laverack setter, Pride of the Border, whelped July 22d, 1876, five dogs and two bitch pups. One dog pup died the same day. The other pups, as well as Jessie, are doing well. They are all liver and white, and black and white colored. Mr. Herzberg claims the name of Patti and Lucca for the two bitch pups on account of their being.

Orphina, out of Gildersleeve's Nellie, (full sister to Twaddell's Bustle), by Pride of the Border, pre-sented her owner, Mr. C. S. Westcott, with nine whelps on the 18th of July; two orange and white dogs with black points; two orange and white gyps with black points; three chestnut and white dogs, and one black and white gyp. The latter is a very beautiful one, and full-sized. They will be shown at the Centennial Bench Show.

H. Thompson's liver and white setter bitch, Bell, out of Thompson's imported Fanny by Scott Rodman's Dash, gave birth to eight pups on the 31st inst.; six dogs and two gyps, by H. A. Topham's liver colored setter. Also on the 19th his red setter bitch, Belle, whelped six pups, four gyps and two dogs, by Robinson's Jack.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

THE MOHAWK DISASTER.—On Thursday last the saddest accident recorded in the annals of American yachting occurred off Stapleton, Staten Island. Commodore Garner's magnificent schooner yacht, the Mohawk, said to be the largest sailing yacht afloat, and probably the most complete in her fitting and adornments, capsized in front of the New York Yacht Club House, drowning her owner and his wife, Mr. Frost Thorn, the latter's brother, Miss

Adele Hunter, and Peter Sullivan, the cabin boy. Briefly the story of the accident is as follows: At 4 o'clock on Thursday Commodore Garner and his guests—the list of whom included, in addition to those lost, Miss May, Mr. Montant, Mr. G. G. Howland, and Col. Schuyler Crosby—went on board the Mohawk with the intention of dining on board and taking an evening sail. Orders having been given to get under way, the mainsail, forcsail, and maingaftopsail were set, and before the anchor was clear of the bottom the forctopmast staysail and jib were set. All the sheets appeared to have been hauled aft and made fast. A strong flood tide was running, and the Mohawk was lying broadside to the light breeze which was blowing from the island. The anchor had just cleared the bottom, and the yacht had not gotten way on her when a squall came through a gap in the hills, and striking the yacht fair on the immense area of canvass set, forced her rail under water, and an instant later threw her on her beam ends. Commodore Garner and his guests had gone into the cabin to avoid a passing shower, and were there when the squall struck the yacht. The gentlemen rushed on deck, but returned to the assistance of the ladies. Miss May was with difficulty pushed up the companion way, but the other ladies became jammed by the loose furniture and the lead ballast which broke through the cabin floor, and could not be extricated. Com. Garner died with his wife. Col. Crosby and the other gentlemen, after saving Miss May and doing all that could be done to save Mrs. Garner and Miss Hunter, were saved themselvss almost by a miracle, and were picked up by boats from other yachts. The bodies of those drowned were found by divers on the following day, the half-submerged yacht having in the meantime been towed to the flats at the mouth of the Kills. The accident appears to have been the result of gross carelessness and incompetency on the part of the sailing master, Rowland, notwithstanding which the Coroner's jury sitting at the inquest acquitted him of any criminal negligence. Com. Garner was universally popular, and his untimely death leaves a void in social and yachting circles which can hardly be filled.

MASSACHUSETTS—*Swampscott, July 15th.*—The first regatta of the Beverly Yacht Club was appointed for July 7th, but failed for lack of breeze. On the 8th at noon another start was made, but the 3d class only succeeded in racing five miles, and the Tulip won the championship pennant. The race for 1st and 2d classes was resalled on the 15th, over a course of ten miles. The Anonyma had the race from the start, but all the yachts were not present. Below is the time made:—

FIRST CLASS.

Name.	Start. H. M. S.	Return. H. M. S.	Actual time. H. M. S.	Correct time. H. M. S.
Anonyma	12 9 00	2 19 45	2 00 45	1 55 04
Thekla	12 31 45	2 49 10	2 17 25	2 11 10

SECOND CLASS.

	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Perl	12 28 40	2 40 45	2 12 05	1 58 34
Water Lily	12 28 00	2 49 37	2 21 37	2 08 58
Mona	12 29 00	3 57 05	2 28 05	2 13 44

The Anonyma and Perl, therefore take the prize and pennant in each class. The Anonyma is a sharpie, recently brought round from New Haven. In a smooth course and moderate breeze, she lies very close and slips along very quickly, but seems destined to give the Regatta Committees of several clubs no end of trouble, as her owner calls her a schooner, about which there appears to be a difference of opinion, as well as on her peculiar way of ballasting. The second regular regatta will take place at Nahant, July 28th. The time of the third is not fully decided. X. Y. Z.

THE "AMERICA" CUP.—August 10th, 12th, and 14th are the dates suggested for the races between the Countess of Dufferin and Madeline for the America cup. The "Countess" has been fitted with a new suit of sails, but will not enter for the Bennett Challenge Cup, to be sailed for to-day from Sandy Hook to and around the Brenton Reef Light Ship off Newport and return.

—In the Match between the yachts Pluck and Luck and Mary Emma, sailed at New Rochelle on Thursday last, the former won, sailing over the course in 5h. 17m. 50s.

—The yacht Vesta, Mr. Mills, has returned from her European cruise.

—The yacht Cassie of Hartford, sailed last week for Watch Hill and Plum Island on a fishing cruise.

—The yachts of the Brooklyn Yacht Club rendezvoused at Glen Cove and started on their annual cruise on Friday last. On Saturday the fleet was at Greenport. On the run from New Haven the Niantic, Mr. Huntley's new sloop, built by Alonzo Smith, of Islip, developed considerable speed, fealing the Madeline 13m. in the run to Orient Point.

THE INTER-COLLEGIATE REGATTA.—Fortunately but one postponement was necessary before the great college aquatic event of the year was decided. On Wednesday last Saratoga Lake designed to rest in unruffled placidity and all three events, the University, Freshman, and single scull races were all rowed without accident or surprise. Indeed the triple victory of Cornell made the day almost monotonous, and the absence of the enthusiastic crowds, of last year indicated that either the great college regatta had itself lost interest for the general public, or that the withdrawal of Yale from the Association, had, as many claimed, militated against its success. It is conceded that the Rowing Association of American Colleges has ceased to exist, but whether a new organization will be formed, upon what basis, or with what memberships, is, as yet undecided.

At 10:45 the six crews, representing Cornell, Columbia, Harvard, Union, Wesleyan, and Princeton, were drawn up in position for the start and almost immediately received the word "go." Cornell immediately took the lead with Harvard second, with Columbia and Union lapping her and Wesleyan and Princeton bringing up the rear. These stations were unchanged throughout the race, the distances between the boats only varying as one or the other spurted. Cornell maintained her lead, the crew pulling a steady stroke, unvarying in its regularity except when Harvard spurted up to forty or forty-five strokes and lapped a little too far. The latter crew did much better than was expected of her, and was barely a boat's length behind at the finish; it is said that but for a little bit of had steering in the last half mile this distance would have been much less. Probably the greatest surprise of the day, if there was any, was the position of Union, gained by more sheer hard work, without much form. So much time has lapsed since the race, that we give merely the time for a record:—

Name.	H.	s.	Name.	H.	s.
1. Cornell	17	02¼	4. Union	17	27½
2. Harvard	17	05½	5. Wesleyan	17	58½
3. Columbia	17	18½	6. Princeton	18	10¼

The time was the slowest made made in a college race on the lake. The names of the winning crew was as follows:—

Name.	Class.	Age.	Name.	Class.	Age.
J. S. Waterman, bow	'77	23	J. L. Jarvis, No. 4	'78	23
D. O. Barre, No. 2	'77	21	J. Lewis, No. 5	'78	20
A. W. Smith, No. 3	'78	20	J. N. Ostrom, No. 6	'76	25

The second event was the "single seulls," which was won easily by Mr. C. S. S. Francis, of Cornell, who did the two miles in 13m. 42½s. The other starters and their times were as follows: H. G. Danforth, Harvard, '77, 13:56; G. D. Parmly, Princeton, '76, 14:21; F. D. Weeks, Columbia, '77, 14.22½.

The Freshman race had but three starters, Cornell, Harvard, and Columbia, alone sending crews. The same order was taken at the start as in the University race, and continued to the finish, Cornell starting off with a stroke of thirty-two to the minute, while Harvard pulled thirty-six and Columbia thirty-four. Again the race was between Cornell and Harvard. Columbia was early out of the race; before a half mile had been passed her rudder line parted and the boat swung out of her line hopelessly disabled. Cornell led throughout and at the end of the second mile had the race in hand, passing the winning line five lengths ahead. The times of the race were:—

Name.	M.	s.	Name.	M.	s.
Cornell	17	23½	Harvard	17	37 9-10

The names of the winning crew are as follows:—

Name.	Class.	Age.	Name.	Class.	Age.
F. N. Wilcox, bow	'79	20	E. W. Gregory, No. 4	'79	19
G. T. Baker, No. 2	'79	18	J. W. Waren, No. 5	'79	18
Wm. Doggett, No. 3	'79	21	J. P. Mason, stroke	'79	22

—The crew which is to represent Trinity College, Cambridge, in the International regatta on the Schuylkill, arrived in this city on Saturday, and proeeeded to Philadelphia. Their movements there will be found chronicled in our Philadelphia letter.

CENTENNIAL NOTES.—Our Philadelphia correspondent writes under date of 24th inst.:—"The first crew that has arrived at Philadelphia for the coming regatta is First Trinity, Cambridge, England. From appearances they have sent a good lot. Arriving at New York on Saturday per White Star Steamship Brittanic, they have come at once to the course where they propose training. As becomes a crew who mean work they eschew all the temptations of the holiday year until the race is over. The crew is composed of Messrs. Close, Penrose, Mann and Jameson. Their boats will be here to-morrow, and they are going to work as soon as they can get them. Their boats will be housed with the College Club. The crew have taken up quarters at the Park View House, within five minutes' walk of the boat house," Capt. Goodwin, of Columbia College is here looking up accommodations for his crew. As far as I can judge the starters for the Intercollegiate race will be Cambridge, Dublin, Yale, Columbia and Princeton. I cannot learn that anything has been done by Cornell as yet, but after their brilliant victories at Saratoga it is only reasonable to suppose that they will be amoug the entries. The result of the different college races has caused a deep interest to be felt in the International Undergraduates' race. The question of who is the fastest American college crew is not yet settled. If Yale can beat Harvard easily in eights in a three-mile race, and Harvard can push Cornell hard the same distance in in sixes, where would Yale's four be in a mile and a half? After having worked out the above proposition I fail to have the data by which the race between all the eomers may be decided.

In a short time the crews will be practicing on the river and then I can predict. Perhaps my predictions will be worth as much as newspaper predictions ever are. After all the great race will be the open-to all, that is, open to all amateurs. In this race the college crews will also row. And the next question, can an average college crew beat an average so-called amateur crew, will perhaps be settled.

A host of unknowns will be in to try the Argonautas, Atalantas and Beavernycks. Of the twelve Philadelphia clubs but one has entered, and that the Vesper—not a member of the Schuylkill Navy. This is either very creditable to the hospitality, or very discreditable to the pluck of the Navy clubs, and as a disinterested spectator, as a newspaper correspondent should be, I would say the latter.

The Dublin Crew have advised Commodore Ferguson that they will sail by the Cunard or White Star Steamship on the 3d or 4th prox. SCULLS.

—Edward Hanlon, of Toronto, has exeepted Alex. Brayley's challenge to row any man in the Dominion a scullers race, and will allow expenses to row on Toronto Bay or will row him at Lachine, the match to be for $500 a side.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

A. C., Mohawk.—I would like to know if the Tappan process of waterproofing is a patent? Ans. It is.

MOOSE, Pittsfield, Mass.—Will you kindly inform me when the close season for moose expires in Nova Scotia? Ans. September 1st, 1877.

READER, Marshall.—Will you give me the addresses of one or more manufacturers of ozological supplies? Ans. C. J. Maynard, Newtonville, Mass.; S. E. Cassino, Salem, Mass.

B., Barnegat.—The little fish belongs to the family *Cyprodontidæ* (in which the moon-fish and angel fish are placed); but we cannot decide the species. It is probably a young fish from Mexican waters, which has been brought up by the Gulf Stream.

F. J. S., Pittsburgh, Pa.—We were in error in our issue of last week in stating that the close season for squirrels in your State expired on September 1st. A recent act of the Legislature changed the date to July 1st.

DON, Bangor, Me.—What particular localities are best to visit at Moosehead Lake with a view to woodcock? Ans. We have never shot woodcock at Moosehead, nor do we believe they are to be found there in any numbers.

W. R., Warren, Pa.—Will you please inform me, through your paper, if the Scotch deerhound yelps or gives tongue or tail, like the foxhound? Ans. The Scotch deerhound has becomn very rare. They are used for stalking, and scarcely ever give tongue or trail.

J. K., Brooklyn.—Would you kindly inform me if the infallible fish bait of Jos. Labadie, Galveston, Texas, is only useful for fresh water fishing, or also for salt water fishing? Ans. We believe that it is intended for both fresh and salt water fish.

S. V., Cleveland, Ohio.—Is there a breech-loading shot gun made by Robert Groves; if so, where manufactured, and how do they compare with Webley's, Clabrough's, or Moore's make; and would one of their $160 guns be a good reliable gun? Ans. We do not find the name of Robert Groves upon our list of gunmakers.

H. D., New York.—How can I make a living by shooting, fishing, trapping, breeding, or anything in that line near this city? Ans. Unless you go to oystering and clamming in the Great South Bay and shoot ducks in the season, we cannot advise you. It would be but a poor living at the best. We should prefer to give you Mr. Greeley's advice: "Go West, young man, go West!"

C. A. S., Shakopee, Minn.—What is the regulation target in rifle practice at 100 and 200 yards? Ans. The new Wimbledon target now in general use in this country at 200 yards range is: Bullseye, 8 inches; centre, 26 inches; inner, 46 inches; outer, 4 feet by 6 feet. No matches are shot at Creedmoor at less than 200 yards. In National Guard shooting at 100 yards the above target is used.

JUMBLES, Badin, Pa.—I understand from pretty good authority that in parts of Ohio, if not the whole State, the law for killing squirrels has been laid aside, and they can be killed at any time. I, for one, would like to know from good authority if such is the case? Ans. The game laws of Ohio, as amended April 11th, 1876, make no mention of a close season for squirrels.

WOULD LIKE TO KNOW, Brooklyn.—Please give particulars as to what is implied or secured by claiming a name for a dog, as frequently mentioned in your paper? Ans. By publishing a name claimed for a dog, the name, to a certain extent, becomes your property, and although not *secured*, yet no other breeder or owner seeing the name would be likely to use it. The notice is also useful as a reference and costs nothing.

P. W., Aurora, N. Y.—1. Will you please inform me whether tha Whitney rifle is as accurate as the Remington? 2. Is the new Phœnix a good gun? 3. Will a .38 C. F. grooved ball shoot as well as a .40 C. F. patched ball? 4. Where can gill nets be found? Ans. 1. We cannot speak from our own experience. 2. Do not know it. 3. No. 4. From Conroy, Bissett & Malleson, No. 65 Fulton street.

J. W. M., Rochester, N. H.—Will you please tell me if there are any rim-fire metallic cartridges of .36 bore made excepting the flange cartridge for Allan & Wheelock revolvers? Ans. There are .36 metallic cartridges made by several manufacturers, both rim and central fire, short, long, and extra long, differing somewhat from the Allan & Wheelock revolver cartridge.

J. F. M., Philadelphia.—I have a young setter dog that was scratched by a cat, cutting the membrane in the corner of one of his eyes. It did not appear at first to have done any damage, but the membrane has since become enlarged, and now protrudes about the size of a small bean. Will you please inform me what I can do for it? Ans. Dissolve 20 grains of borax in 2 ounces of camphor water, and wash the eye with the lotion.

HAY FEVER, New York.—What sports (fishing and gunning) can I engage in in the White Mountains without conflicting with the game laws? I should prefer to remain in Vermont or New Hampshire, but might go a little ways into Canada. Ans. The close season for trout commences in both Vermont and New Hampshire on September 1. Ruffed grouse shooting commences on the same date, and woodcock can be killed in New Hampshire from July 4th, and in Vermont from August 1st.

W. C. M., Princeton, Cal.—I have one of Scott & Sons' "premier quality" guns, which leads very badly when fired a dozen times or more, and is very troublesome and hard to clean, it being next to an impossibility to remove the lead from the barrel with an ordinary wiping stick. If you will give me a remedy to prevent this I will consider it quite a favor. Ans. Mercurial ointment will probably prevent your gun from leading. If not, take it to a reliable gunsmith and have it "draw-bored" and it will not trouble you any more.

A. C. B., Holyoke, Mass.—1. Will you send me Mr. Rollins's directions and measurements for building portable boats? 2. What is the best waterproof canvas, the price, and how many yards will it take to cover a canoe 15 feet long? 3. When is the law off from partridges and quail in this State? 4. When from black bass in the Connecticut River? Ans. 1. Mr Rollins has not yet forwarded them to us. 2. Write to C. Tappan, Greenwood, Mass. 3. Partridges, September 1st; quail, October 15th. 4. July 1st.

W. N. W., Biddeford, Me.—I have a valuable Irish water spaniel five months old that has been sick for the past two weeks, and I would like to have you prescribe for him. He is very poor, has lost his appetite, nose hard and dry, coat harsh and rough, eyes listless at times, and ran nearly all the time. Do you think areca nut would help him any, and if so, what would be the dose, and where obtainable? Ans. Your spaniel is, in all probability, afflicted with worms. Have mailed to you the proper doses of areca nut, with directions for giving it.

E. S. F., Mansfield, Conn.—The people of Connecticut are fast exterminating game by snaring. Is there any law against snaring, and will you speak of the subject in your paper? Ans. We regret to say that there is at present no way of preventing the extermination of game by snaring in Connecticut, as that practice is permitted by act of Legislature. Section 2 of the law authorizes any person to snare or net game birds on his own land, or on any other with the consent of the owner; but this of course only applies to the open season, although no doubt it is done at all times. Until this section is repealed game will be scarce.

IBEX, Atchinson, Kan.—1. What breed of dog would you recommend for the class of shooting which we have here—prairie chickens and quail in the early fall months, and ducks later in the season? 2 Is the Gordon setter as reliable as some other breeds of English or Irish setters? Ans We have made periodical shooting trips to the western prairies during the past twenty years, shooting over the different breeds of setters and pointers, finding that well-bred, well broken dogs, either setter or pointer, answer the purposes required of them. If you keep but one dog and use him as a duck retriever, a setter will be more serviceable. 2. A good, thoroughbred, well-broken Gordon setter is as reliable as a dog of any other strain.

NEW READER, Boston.—Will you please tell me what mange looks like, the cause of it, and a cure? I have a pointer one year old, and I am afraid he has the mange. I saw a cure in one of your papers a short time ago, but cannot find the paper. Ans. There are several varieties of mange. Common mange generally arises from want of cleanliness in keeping dogs; eruptions break out on the skin, and the hair stiffens and falls off. Take bazilicon ointment, 2 ounces; sulphur, ½ ounce; spirits of turpentine, enough to make the ointment of proper consistency to rub well into the skin. Wash the parts affected occasionally with carbolic soap; feed no meat, and give the dog plenty of exercise.

J. H. S., Malone, N. Y.—1. Please give me briefly your notions about "in and in" breeding with dogs. I have some fine Italian greyhounds, and have no male now except near of kin relations. To breed from them will I get just as good, fine, healthy stock as I will to get a dog from another family? 3. What are fine male dogs of this breed worth? 3. B thoroughbred Italian slut got with a cur this spring, and had a litter of pups. She is three years old, and had had two litters before. Is there a liability that her pups hereafter, if mated with a thoroughbred, will be contaminated, or take back from the cur? Ans. 1. We consider it decidedly better to avoid breeding "in and in," yet some good dogs are inbred. 2. A good dog would be worth about $50. 3. No.

FOREST AND STREAM

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,

[POST OFFICE BOX 2832.]

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty-five per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, JULY 27, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,
Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, July 27th.—Racing: Saratoga. Trotting: Gettysburg, Pa. Cleveland, O.; Sycamore, Ill. Yachting: Bennett Challenge Cup, Sandy Hook to Brenton Reef and return. Rifle: Eleventh Brigade practice at Creedmoor. Base Ball: Chicago vs. Cincinnati, at Chicago; St. Louis vs Louisville, at St. Louis; Boston vs. Mutual, at Boston; Mutual, formerly Argyles, vs. Mutuals of the Seventeenth Ward, at Brooklyn; Our Boys vs. Madison, at Brooklyn; Washington Market vs. Newark Market, at Jersey City; Olympic of Paterson, vs. Star, at Saracuse; Quickstep vs. Mystic, at Manhattan.

FRIDAY, July 28th.—Trotting: Cleveland, O.: Sycamore, Ill.; Wilkesbarre, Pa. Regatta Beverly Yacht Club; Nahant. Base Ball: Quickstep vs. Alert, this city; Harrisburgh vs. Keystone, at Erie, Pa.; Olympic of Paterson vs. Active, at Wappinger's Falls, N. Y.; Chatham vs. Athletic, at Hoboken; Chelsea vs. Carbondale, at Brooklyn; Jersey City vs. Bergen, at Jersey City.

SATURDAY, July 29th.—Racing: Saratoga. Trotting: Wilkesbarre, Pa. Rifle: Poppenhusen Badge and 7th Regt. medals, Creedmoor. Annual Eastern Cruise, Athletic Yacht Club. Base Ball: Chicago vs. Cincinnati, at Chicago; St. Louis vs. Louisville, at St. Louis; Boston vs. Mutual, at Boston; Osceola vs. Olympic, at Brooklyn; Our Boys vs. Wiloka, at Brooklyn; Crescent vs. Unique, at Brooklyn; Tea vs. Tea, at Brooklyn; Staten Island vs Alaska, at Staten Island.

MONDAY, July 31st.—Rifle: Second Brigade practice at Creedmoor. Base Ball: Hoboken vs. Union, of Newark, at Hoboken.

TUESDAY, August 1st.—Racing: Saratoga. Trotting: Buffalo, N. Y.; Muskegon, Mich.; Freport, Ill. Regatta: Grand River, Mich. Base Ball: Union of Newark vs. Chelsea, at Brooklyn; Athletic vs. Centennial, of San Francisco, at Philadelphia.

WEDNESDAY, August 2d.—Trotting: Buffalo, N. Y.; Muskegon Mich.; Freport, Ill. Regatta: Grand River, Mich. Base Ball: Klein vs. Centennial, of San Francisco, at Philadelphia; Buckeyes vs. Star, at Syracuse.

GREENWOOD LAKE.—In pursuance with a call published in our last issue a meeting was held at the Brondon House, Greenwood Lake, on Saturday evening last, for the purpose of forming an association, the object or which would be to prevent the constant ponching which is now being carried on, and to restock the lake with game fish. The meeting, however, was not very well attended, and was adjourned to Saturday, August 5th, a committee of seven being appointed to organize a club at that time. The committee consists of the following gentlemen: Daniel E. Storr, New York; Dr. Alcott, Brooklyn; Alexander Brandon, New York; Smith Ely. Jr, New York; S. P. Stewart, New York; H.C. Cook, New York, and C. H Winfield, Goshen, N. Y. The club already comprises, we are informed, some two hundred members, and when fully organized a club house will be built. Greenwood Lake is the handsomest sheet of water within a similar distance from the city, and a most attractive spot for both shooting and fishing.

GAME PROTECTION.

PROTECTION OF SALMON IN NOVA SCOTIA.—A correspondent of the Halifax *Herald* writing from Margaree River says:—"I am under the impression that salmon fishing in the Margaree will soon be a thing of the past, for it is almost impossible for a fish to get any distance up the river from the fact that nets are strung across the river every few rods, from its mouth for a distance of four miles—and this, notwithstanding that almost every third man you meet is a Fish or River Warden, receiving from the Government from $20 to $100 per year to look after, prevent, and punish such illegalities. * * * In the fall, when the fish are spawning, they are nearly all destroyed by men and boys, who chase them into shallow waters, and attack them with nets, traps, spears, pitchforks, etc., and often kill hundreds in a single night.

PENNSYLVANIA.—We have to report a case of punishments for violation of the game laws from this State. Our correspondent, "Limberger," writes from New Brighton, Beaver Co., under date of July 17th, as follows:—"At the June term of our court, the Enon Valley Sportsman's Club had a Mr. Palmer before his Honor Judge Hice, for catching black bass in the Little Beaver in the month of April last. This was an appeal from a magistrate's decision, but our judge and jury being of a sporting mind knew that black bass were found in the Little Beaver (defendant claiming that no such fish were found in said stream), and promptly found him guilty and fined Mr. P. $25 and costs of prosecution, altogether $100.

MOOSE IN NOVA SCOTIA.—We have many inquiries from correspondents relative to the expiration of the close season for moose in Nova Scotia. As will be seen from the copy of the act which we print below, moose cannot be killed in Nova Scotia until one year from next September. In the meantime it is gratifying to know that the close protection afforded this noble game for the past two years has resulted in their large increase, so that when the time does arrive the sport will be worthy of the name:—

An Act for the Preservation of Useful Birds and Animals, Passed the 9th day of May, A. D. 1874.

SEC. 1. No person shall kill, or pursue with intent to kill, any moose, or shall expose for sale, or have in his possession any green moose skin, or fresh moose meat, or any part of the carcass of a moose for the period of three years, commencing on the first day of September in the present year, and ending on the first day of Sept., A. D. 1877.

NIANTIC, Conn., July 21st.

EDITOR FOREST AND STREAM:—

I have had much pleasure this spring on the many trout streams of this section. My catches never were very large, but that did not decrease the enjoyment. Like all law-abiding citizens, after July 1st I ceased my attempts to capture the spotted beauties, but to my surprise learn that many persons calling themselves sportsmen quietly steal off, and against all laws of State or decency, make good catches, and secretly take pride in so doing. These parties are not poor, ignorant country boys, who perhaps would not be posted on days and dates of close seasons, but individuals of education and culture, so far as behavior goes, but pirates and murderers as fishermen.

Can you not do something to shame them? Just give them a hot dose, and I will promise to read the article aloud in the streets of New London for the benefit of all good lovers of sport, and the humiliation of such villainous poachers. Plenty of black bass, pickerel, perch, etc., can be had. Therefore I say give the trout a chance, and next year we will not regret it. SCALES.

We have been trying now for some years to urge upon everyone within our reach the necessity of observing close seasons. Where this is not done the penalty quickly follows the offense. Still, we regard the law in Connecticut as closing unnecessarily early, and would suggest that it either be made total for a few years or continued until September 1st. In fact, with a longer open season and a market in an adjoining State, the law as it now stands will always be more or less a dead letter.

ADVERTISE!—The advantage of FOREST AND STREAM as an advertising medium is well illustrated in the fact that Messrs. J. W. Simmons & Son, of Boston, have received orders from England for three of their shooting suits, which they have duly shipped to that country. It also speaks well for Messrs. Simmons & Son's goods, which, the gentleman ordering writes to them, combines the good qualities of the French, the English, and the American sporting suits.

FLORIDA LANDS SELLING.—The lands along the line of the Transit Railroad from Fernandina to Cedar Keys are being rapidly bought up as offered by Col. J. B. Oliver, General Agent of the Florida Land and Immigration Co., 229 Broadway, N. Y. We are advised of recent heavy transactions with Boston capitalists. And Col. Oliver has engagements to sell to almost all the Eastern and Northern States. We are glad to chronicle the success of his scheme, and to note this new evidence of his well-directed energy.

AUTHORITY OF FOREST AND STREAM.—Among the prominent exhibits of the large island of Bermuda at the Centennial Exhibition, is a model of the Royal Bermuda Yacht Club, five or six feet long, and fully rigged. It has no other label or explanation upon it than a handsomely-mounted article clipped from FOREST AND STREAM of June 8th, 1876, describing yachting in Bermuda, and the peculiarities of the pleasure craft in those waters.

THE BRUNSWICK.—This is a new first-class hotel, conveniently located in the best part of Boston, within easy reach of the business centre of the city. The traveler will receive the best attention and find every comfort at the Brunswick. The advertisement and a cut of the house will be found in another column

INCOMPETENT CAPTAINS.

THE melancholy result of the gross carelessness or incompetency of the late sailing master of the ill-fated Mohawk leads us to think that we have perhaps been hasty in our strictures upon sail makers, riggers, spar makers and builders of yachts. The usual result of a regatta in our bay had become so monotonous in its story of broken spars or rent sails that such occurences had come to be looked upon as matters of course, and the fault was generally placed upon either the vessel itself or the man who fitted her. Take, for example, the last regatta of the New York Yacht Club, when, in a moderate breeze, while coasting vessels were carrying all working sails, the Tidal Wave lost her jib-boom, the Madeleine her mainmast, and the Mohawk, although not racing, her mainsail itself, besides a number of minor casualties; and on the same day but two of the sloops and only a portion of the schooners rounded the lightship. It is constantly said of our yachts that they are not fit to go outside of the harbor, where there is likely to be any sea, and comparisons not at all flattering are drawn between them and English yachts. It seems now, however, as though much of the blame hitherto placed upon the vessels should be transferred to the shoulders of the men hired to sail them. For our part we cannot see why owners of yachts, particularly the larger class, should not demand from their sailing masters the same certificate of competency as is required by underwriters and ship owners. Indeed, still more should be required of them, for the greater proportionate area of canvas carried by a yacht not only necessitates greater caution in handling, but the excitement of racing calls for a cooler head. It is too often the case, however, that the reputation gained by winning a race or two is sufficient to place a sailing master in a position for which he is entirely unfitted.

A certain amount of sympathy was created for Rowland, the Mohawk's sailing master, at the Coroner's inquest by Col. Crosby's warm-hearted appeal for him, an appeal which probably gave him the liberty which subsequent events showed he was not entitled to. At the inquest Rowland stated that at the time of the accident he slacked off the main sheet; being at the wheel this would have been a simple thing for him to do, but when the vessel was raised the main sheet was found to be flat aft and made fast. Another point against this model sailing master is that being at the wheel, and consequently where he could see down the companion-way, and almost in full sight of the struggle, he made no effort to save his employer and his wife, but devoted his energies entirely to the salvation of his own worthless body. We should think that all true sailors would blush for this man.

ADIRONDACK ITINERARY.

YOU have had two letters from "Piseco," and perhaps are willing to postpone any further reference until another year, but I find that I haven't said much over half of what I wish to, so call again upon your compositor's deciphering abilities.

So far I have only told you of what I have done in the woods—that I have gained health, rest and trout, and showed that in obtaining the first two there were drawbacks. I now propose to dilate a little upon what I have *not* done, although I have tried hard enough, and where, in my opinion, the fault lies. I have not caught as many fish in my three weeks' sojourn as I should have caught in one of them, and as in previous years I have done in less time. There were reasons operating against me beyond the power of guide or weather to counteract. First, though, as it has devolved upon me to introduce this part of the Adirondacks to many of your readers, I will comply with several requests received since my first letter, and give briefly some sailing directions modelled after the "Camp Life in Florida," combining facts useful to the tourist, if not entertaining, and inferences drawn therefrom: Leaving New York at 8:30 A. A. by the Hudson River Railroad you arrive at Fonda at 3 P. M., and transfer to the train of the Fonda and Gloversville Railroad. In less than half an hour you reach the latter place and connect with a comfortable car, which carries you to Northville by 5 P. M. The road runs along the banks of the Sacondaga River—the main headwater of the Hudson—is pleasant, and you get your first breath of real woods air. You may not arrive at Northville quite on time; the conductor "accommodates," as do all in these parts, and a running woman stops the train with her signal as in your village she might a street car. But a few minutes, more or less, makes no difference up here; it is the only train on the track, and can only come into collision with itself. If you are in haste and choose to press things, a note previously written to John Ellsworth, at Northville, will bring him with a very comfortable wagon fitted with springs and a lusty team, well accustomed to making good time on a woods road, to the depot. You can get a cup of coffee and a snack at the depot restaurant, and in ten minutes make a start for the wilderness.

From Northville to Wellestown is sixteen miles over a pleasant road on the river's bank, you will reach it by 9 P. M. If you choose, stop over at a comfortable hotel (Mr. Horsley's), get a good trout supper, good bed and breakfast, and at early morn improve the bracing air, and by the time your after-breakfast pipe is finished you can be well on your way to Sageville. The road for the first four miles leads up a steep hill, following a ravine across the mountain; through it a noble stream, with pools and falls and rapids, will surely tempt you to stop for a cast;

don't do it, the village boys have been out before you; hardly was the ice out before the creek was cleaned. Four hours will carry you the thirteen miles to Andrews's, passing Sturgis's on your way at four miles less, where I am told the accommodation is good, and in season the trolling on Lake Pleasant may pay; but it is a little too close for my tastes; the farther one goes the better the trout fishing is is my experience. Andrews's pleasant hotel I have told you about; also Rude's hostelry at Pisceo, nine miles farther on. Ellsworth's charges for bringing two persons to Andrews's are $10, and he will carry four at a moderate advance. On Wednesdays and Saturdays a stage leaves Northville, which carries passengers to Sageville at $2 each. At either of the places I have named you are in the center of game and fish localities, and your first afternoon or evening will give you trout or venison, according to the season. You can, by pressing, kill a deer the same day in which you ate your breakfast in New York. Lake Pleasant, Round Lake and Pisceo are good trolling lakes, and furnish lakers from twenty pounds down —generally down —and brook trout from three pounds to the smaller sizes. Sand Lake, Mud Lake, Louis Lake, Jessup's River, Sacondaga, West River, and numerous smaller lakes and streams furnish good speckled trout fishing, and are all within a day's journey. Competent guides, good boats, etc., can be gotten at either hotel. The prices for board and room at Rude's are $1 a day; at each of the other places $1.25, and it is cheap enough, as the landlord has to pay 25 cents a pound for his trout, and a pound of trout raw isn't much among one when cooked. It is told of one of our landlords that, being a little short of trout, he bought from a transient fisherman a three-pound laker for seventy-five cents, and served that laker up for dinner. No one was at the table but the fisherman, who, owing to "mountain air," "no breakfast," etc., was hungry. He ate that trout, and bread, and butter, and potatoes, and the pork, and cream, and berries, and pie, and drank much tea, and paid fifty cents for his dinner. The host, who paid his guest a quarter on leaving, thinks he got off cheap. You pay your guide $2.50 a day and he takes his chances. If you want to fish from "early dawn to dewy eve" he'll not growl; but if the day is bad and you do little he expects his per diem, with no discount. If you have come unprovided with suitable tackle he will fit you out with gear that will catch trout; probably you will have to depend upon him any way, even if you have fitted out at considerable expense and in first-class style, unless you have already "been there." Bring a trolling rod, not over ten feet long, a balance-handled reel that will carry 200 feet of wet trolling line, which should be of braided linen, or, better, of waterproofed silk. A patent braided cotton line, purporting to be waterproof and cheap, isn't cheap; it swells, jams in the rings, and turns very white when wet. If you want to fit out for camping, consult back numbers of FOREST AND STREAM, and if you want to camp out a spell and are not fitted, your guide can be depended upon to provide all necessaries, except tobacco and fly grease; don't take any chances on them. The guides are an independent, sturdy set of men, obliging, and proud of giving their man a fair day's fishing; will do any guide's work you ask, but get mad easily if imposed on. My guide—square, honest Hiram—would grease my boots to keep water out as often as I wanted, but had I asked Hiram to black them for me, there would have been trouble. Men work for each other in the woods, but are not servants.

It is here where we get the originating point of the Americanism "help." One man has a surplus of daughters; a grown girl goes into a neighbor's family and "helps." As likely as not her employer is an employe of her father. She waits on the table and washes the dishes, but at the Fourth of July dance she takes no back seat while her employer's daughter has the floor, if she possesses the attributes which, by natural selection, entitle her to the front. This treatise on "help" is introduced to pave the way to some ideas I propose to advance farther on. I want to establish the fact that the people who live in the woods are not a people who can be treated unjustly, or slightingly, or as servants and not know it, or knowing it, fail to resent. Quiet, self-contained, and to a great extent self-dependent, they have divested themselves of much of the form and ceremony of the outer world, which have gone with other discarded luxuries. Two neighbors (four or five miles apart) meet on the high road. Not a nod of recognition or salute passes, but the team stops—

"I've got a bag of flour for you."

"Leave it at the house."

"All right."

"How much is your charge?"

"Ten cents," perhaps, but as often—"Never mind; nothing;" but the teamster must by woods etiquette have the privilege of refusing. Every service has its value; don't fail to offer its equivalent. It is more than likely it will be refused, and the man with the team going out to the village could not have refused to render the service. I bring in these little illustrations of the independent, square way of doing business with few words which is the habit of the woods people, to give an impression of the class of persons who are most affected by our game laws.

Hard work and "know how" has not enabled me to catch as many trout as I ought to have caught. I do not expect, that on a successful trip, my trout shall cost me over the ordinary price—$1 a pound; this time they have cost me nearer $4. I don't complain though. I had a good time and got my returns in far more valuable shape than trout. I can sleep now—from 9 P. M., till 9 A. M. and longer—except for breakfast, which is now no longer uncared for. I devoted numbers of days to the so-called "brook trout" and caught comparatively few. To be sure I got some beauties—trout that justified me in "wetting my throat" with cold tea, which, by the way, I find invaluable on the lake. It is Old English breakfast in a bottle. I sent two two-pounders to a friend in your city, and he, an old woods ranger, wanted to know where such splendid brookers could be obtained so near New York that the mountain ice they were packed in was still unmelted. And I had others as large, and a number above a pound in weight, but to get those fish I had to work for many days. The Sun's first kiss to the lake I witnessed, and as he bade adieu, behind the western hills, I reeled up slowly and saluting the grand old echo Gnome of the mountains, went shouting home, enjoying his quaint replies. Many miles I rowed for every pound I caught, and tried with fly and bait, with even less success than with the spoon. No large ones could be tempted by the former, and chubs made the latter process a worrisome one. At first I thought that I was simply having bad luck, that it was too hot, or too cold, or too late, or too early, or too smooth, or too rough, or that as the guides say "the sign was'nt right," all of which reasons are generally brought into requisition; but as I became more familiar with my surroundings, and tried in every way, under every sort of circumstances, the explanation of my ill-success gradually dawned upon me. The reason why I did not catch lots of trout, was simply this: There was'nt lots of trout to catch. And, reason for a reason, there isn't lots of trout, because we have no game law which has any influence whatever toward preserving the fish in these public waters; but we have one, which, on the contrary, works actively to prevent the preservation to a certain extent, of fish and game; with which apparently rash assertion I will wind up for this week, and in your next issue will rise and explain, I hope, in a satisfactory manner.

PISECO.

OUR CENTENNIAL LETTERS.—NO. 7.

EVERY naturalist is interested in the teaching of the knowledge of nature in the public schools of the country. It therefore occurred to me as a useful thing to investigate the part which the study of natural history played in the educational scheme of each State. Among those States having exhibits of school work are Massachusetts, Pennsylvania, New Jersey, Ohio, Indiana, Michigan, Wisconsin, Minnesota, Illinois, Missouri, Tennessee, and some of the Southern States. The questions which I sought to have answered were in regard to how much attention was being paid generally to natural history (zoology, botany, geology and comparative anatomy); whether the interest was increasing, and whether it lead to the collection of cabinets of specimens in the schools by their own efforts; whether the Boards of Education encouraged it; and whether any instruction in this study was required in the ordinary graded schools. The answers, on the whole, showed a more encouraging progress in the matter than I had anticipated.

In this respect, as in all other lines of advanced instruction, Massachusetts leads. The interest felt in Boston and its neighborhood has spread beyond, and every large town is a centre from which enthusiasm radiates. That small State has over 125 free public libraries within its borders, and a dozen great museums. Those are the tools, and their presence is an encouragement, lacking in most other States, to pupils whose innate taste is in that direction. Almost all the schools have their little cabinets—the nucleus of which in many cases is procured by help of an appropriation of school money, and the few deeply interested workers keep up the spirit of the rest. No private school considers itself completed unless it gives instruction in natural history; and that it is because of a real desire of the pupils I know from the quick interest and close attention with which I was listened to when a year or two ago I gave informal lectures on this subject among the schools in and about Boston. Every year many scholars from the public schools volunteer assistance in the museums, or take special courses in biology at the universities. For many years to come we must depend on Massachusetts for our best teachers in this department. One of her sons, Prof. Edward S. Morse, has, perhaps, done more than any other man to arouse an interest in the study of nature through the country; and I have found his name mentioned with lively appreciation by persons from widely separated States.

New York shows none of her school-work except what Cornell University displays in a corner of Machinery Hall; and in the respect to which we are now attending it is doubtful if she had much to show. It is to be hoped, however, that the naturalists at Ithaca, at Albany, and at the new Syracuse College under Dr. Winchell, the geologist, will after a while call more attention to this important aspect of culture.

New Jersey has been greatly belied. One of her prominent teachers once told me for a fact that he had had applicants for admission to a normal school fail to come within 100,000 miles of the length of the State, so limited was their information; but when I saw her exhibit I threw away my prejudice. Her system of education shows science to be prominent. She makes use of all the appliances necessary for its study from a simple chart to a binocular microscope, and the results appear in the fine and rare specimens which the children have sent from their school cabinets, in the drawings with pencil and with colors, of birds and animals, and in the beautiful herbariums. The Jersey City High Schools show several cases of rich-looking minerals gathered about Bergen Hill, and some excellent drawings in ink of the skeletons of fishes and other anatomical sketches. Schools in the northwestern part of the State send a case of fossils, among them mastodon's teeth from Essex county. An amusing thing close by is a large case of very nicely mounted butterflies and moths with a hat stretched out in the centre. It is more of an incongruity than appears in the form which harmonizes well enough with the broad-winged insects. A very conspicuous object is a great pantographic chart of the Animal Kingdom, painted by Miss Mary Dalyrimple, a pupil in the Philotechnic Institute at Camden. The execution is not bad, but the system is so desperately artificial that it would seem to be more valuable as a curious piece of ingenuity, than as of any aid to either teacher or learner. Miss Dalyrimple has also tried her brush on large pictures of birds for class-room purposes. The coloring is uniformly bad, but the drawing is good, and these illustrations are no doubt of great use. One sees drawings of animal life everywhere here, but none so good as the oil-paintings of birds done by G. R. Hardenberg, of New Brunswick. Mr. Hardenberg is only eighteen years old, but is already a careful and accurate ornithologist and a prominent artist. His intense anxiety to get minutiæ right detracts from the artistic merit of his pictures, but make them more valuable as every detail of form, size, color and structure is copied from life. The same is true of the plants upon which the birds rest. His attitudes are particularly good, showing much variety, and always spirited life, or, if his birds have given up the ghost, death stiff and stark. The excellent taste and the completeness which exist is owing largely to the care of the Rev. Samuel J Lockwood, well known as a diligent investigator and entertaining writer in natural history. He is Superintendent of Monmouth county, and you may be sure that there is a school where something beside "book" learning is inculcated, and where the value of an observing eye and attentive ear is appreciated. He adds ethnology, and shows a beautiful little collection of Indian relics which would serve as a model for greater museums. The relics are classified as (1) culinary; (2) pottery; (3) ceremonial games, etc.; (4) war and the chase. All come from Monmouth county. The high regard in which Dr. Lockwood is held is evidenced by the presence of a life-size portrait of him at work with his books and microscope. It was executed by one of his pupils, and is very creditable. Trenton is another center of scientific instruction. This is due largely to the labors of an enthusiastic botanist and successful teacher, Prof. Austin C. Apgar, of the State Normal School, who was one of our hardest workers at Peneksee. Prof. Apgar has invented and printed a system of easy botanical analysis by which his students are able to make famous progress, as the large and handsome herbariums of plants indigenous to Trenton show. Prof. Apgar has a way of rousing enthusiasm in all his pupils, whatever be the subject before the class.

Ohio has, perhaps, the best general manifestation of all the operations and results of the American public school system. For example, she shows by a series of red disks of proportionate size the relative attention which each study receives. But it was somewhat discouraging to find that natural history was represented by a spot the size of a bullet as compared with penmanship, the disk of which was as big as a Creedmoor target. Yet, while this is true on the average, there are some bright spots. Elyria is one, Urbana another, Marietta a third, and if we include archæology in our inquiry we shall find a very general interest all over the State. The high schools of Cincinnati, however, possess large cabinets of natural history which they are constantly augmenting; and that study receives a good share of attention to the delight of the scholars. So I am told.

What progress is making in the remaining Western States must be left untold until next week.

COOL!—In a recent number of *The Queenslander* (Brisbane, Australia) appears the following paragraph in double leads, under the head of "Instructions to Amateur Sailors:"

SIR,—Having been from my boyhood fond of boating, and taken an interest in yachts partial to the same, and who do not object to a little hard work or privation which is sometimes to be met with when out for a few days' holiday cruise in the southern portion of our beautiful bay, I give the following rules for safety in sailing small craft, which amateurs should study and act on. They will, I think, find them useful in learning to handle a sailing boat properly and with pleasure to themselves. HENRY O'REILLY.

Now what are these excellent rules? Nothing more or less than the rules (original with us) which we printed in the FOREST AND STREAM for August 12, 1875. They were so good that we had cut them out, intending to reproduce them with acknowledgment, but had not read far before we recognized them as old acquaintances, in fact our own long-lost. It is very unlucky for Mr. O'Reilly that his "interest in youths" should have prompted him to print his advice in that copy of the *Queenslander* that strayed into our sanctum.

—On the grounds about Col. Thompson's fish farm, in West Springfield, Mass., are deer running about, which gives the place quite an English tone. Two fawns were born there last week.

A NEW MOCCASIN.—Thomson, whose waterproof shooting and fishing suits have attained a world-wide reputation has invented, and is now making an oil finished, grain leather shoe pack, or moccasin, made to lace up with a water-tight tongue. They are made with soles for shooting, or without for canoe or snow work. The cut which accompanies the advertisement in another column describes them perfectly.

GRAYLING!—We have received for distribution a number of "Tourists Guides" for Northern Michigan summer resorts, where the grayling and trout abound. This section is reached from Chicago and Cincinnati by the Grand Rapids & Indiana Railroad, which passes through a most charming region of country.

—Two articles in our Natural History columns are worthy of note—the sharp arraignment of the crow, which will no doubt find a champion among our readers, and the list of the game birds of Central Michigan given by Mr. Covert.

THE KENNEL REGISTER.—We print this week an abstract of the pedigrees of the first 100 dogs entered in the Kennel Register. This list we will continue to issue until the total number is reached. It will be observed that there are many blanks, such as the date of whelping, breeders, etc. We shall feel obliged if such of our readers as observe these omissions in connection with their dogs will supply us with the information. Our object in printing this abstract at the present time is that all these difficulties may be corrected, and the labor of preparing the Register in complete book form be somewhat lightened. We shall also feel obliged if those who propose to register their dogs will do so at once, as we desire to commence the preparation of the book at an early day. In addition to the pedigrees the volume will contain the best of the kennel matter which has appeared in our paper since its first issue

Shot Gun and Rifle.

GAME NOW IN SEASON.

Woodcock, *Philohela minor.*
Black-bellied plover or ox-eye, *Squatarola helvetica.*
Ring plover, *Ægialitis semipalmatus.*
Stilt, or long-shanks, *Himantopus nigricollis.*
Red-breasted snipe or dowitcher, *Macrorhamphus griseus.*
Red-backed sandpiper, or ox-bird, *Tringa americana.*
Great marbled godwit, or marlin, *Limosa fedoa.*
Willet, *Totanus semipalmatus.*
Tattler, *Totanus melanoleucus.*
Yellow-shanks, *Totanus flavipes.*

"Bay-birds" generally, including various species of plover, sand-piper, snipe, curlew, oyster-catcher, surf-birds, phalaropes, avocets, etc., coming under the group *Limicolæ* or Shore Birds.

NEW YORK—*Good Ground, July 17th.*—The shooting season is opening well. A day or two ago, Mr. Eaton and a friend went out with Mr. Lane for a few hours, and brought back sixty-eight fine birds—mostly dowitchers, yellow legs and ring-tailed marlins. We have not tried the fishing yet, though we have eaten some very fine fish caught in the bay. HARRIE.

Syracuse, July 18th.—A pigeon shoot occurred at East Syracuse to-day. It was well attended, and the scores were excellent. For the first sweepstakes at ten single birds, usual conditions, there were eighteen entries. F. Abbey, of Chicago, won first prize, $27; H. Lewis the second, $16 20; and M. Mayhew the third, $10 80. A double-bird sweepstakes followed. F. Abbey killed all his birds, and won first money, $9 00; Henry Gale, second, $6.70; and M. Mayhew, third, $3.80. SENECA.

NEW JERSEY—*Barnegat, July 21st*—Large flocks of bay birds of all descriptions have passed over the point to-day. We anticipate good shooting to-morrow, and are now busy making preparations for them. B.

CONNECTICUT—*New Haven July 20th.*—The few wood ducks raised in this vicinity are now scattered about in the pond holes, in meadows where huckleberries are abundant, for which berries they show a great partiality. A brood of dusky ducks is sometimes found with them, but as only an occasional flock is raised here they furnish no sport until later in the season when other flocks from the north have joined them. R. S. M.

PENNSYLVANIA—*New Brighton, July 17th.*—One party of four bagged 36 woodcock on July 5th. Mr. George Woodruff bagged 11 to one gun on Muddy Creek, Butler Co., on July 7th. Several others have been bagging 4, 6 and 8 to the gun the last week. Ruffed grouse never were as plenty as this season, and everyone seems determined to enforce the game and fish laws. L.

Baden, July 18th.—There are not as many grey squirrels here as there were last year; the young ones are of good size. I spent one afternoon on Raccoon Creek; we saw some, but were only able to get a dozen on account of the denseness of the leaves. There will be a great many hares and partridges in this section this fall, particularly in the neighborhood of Raccoon Creek.

KANSAS—*Atchinson, July 16th.*—There is promise of extra fine chicken and quail shooting this fall. The prairies in Southern Nebraska are alive with young chickens and quail. IBEX.

MISERIES OF SUMMER SHOOTING.

PITTSBURGH, July 15th.

EDITOR FOREST AND STREAM:—

On July 5th I indulged in my first fall day's woodcock shooting. Twenty-six birds were scored to three guns but I was scored by more than twenty-six thousand mosquitoes and fully twenty-six hundred yellow wood-flies lit on my Cheviot shirt or gloves, with a determination to bore till they struck something underneath; they generally appeared to strike something soon, and it felt just like a rod hot cinder. Before the middle of the afternoon I looked as though I had fought a "yellow-jacket's" nest and been defeated. I have a grim hope that they will all catch the malarial fever from sucking my blood, and shake themselves to death. I have a full supply of malarial poison in me, secured in the Kankakee region while on last fall's shooting trip for chickens and ducks. The woodcock were scarce. On a piece of ground where my friend and four others had killed 102 birds three years ago, we flushed only three birds and killed two. At another spot we flushed an old bird that appeared to fly with difficulty. My friend said the old bird had a young one in its claws. This I doubted and following to the edge of an alder swamp raised the bird and cut it down at short range. It was miserably poor, with a breast-bone as sharp as a knife. Just then I heard my friend shout "There they go in all directions!" I turned and caught him—a splendid wing shot he was too—shooting (?) one on the ground *with his cap*, only being his gun to punch him in the ribs. "Oh," said he, as he held up a miserable half-grown bird that his had killed with his cap—"let's get out of this; July woodcock shooting is an outrage;" and we got into our wagon disgusted with ourselves and the law that permitted us to attempt to kill half-grown birds. After driving a while we drew up at a likely place, and here we got ten fair birds. Later, at a place where Nature had been prolific in her favors for the accommodation of *Philohela minor* in shape of fine spring meadows with clumps of willows, we got our finest birds and finished our count. But all agreed that July woodcock shooting ought to be abolished, and personally I shall never be *participe criminis* in such slaughter again, if I can stay the fever that overtakes me so often—I fear too often—to look over a pair of gun barrels at something trying to escape.

But the mosquitoes! Whew!! And the flies that stuck closer than the scriptural brother, and the heat, and muck and mire, and tangled matted, interwoven, interlaced, waist-deep swamp grass and weeds!!! But then the season was open, and if we did not endure it somebody else would, and we would not get the long deferred woodcock hunt. When night came and we boarded the train for our seven hours' night ride home the dogs were jaded and all but worn out. Some had gone under before noon, others had cholera morbus or canine cramps with vomiting in the afternoon, and looked like dogs in the first stage of hydrophobia. Yet they were all prize dogs. I threw myself on a pile of mail bags in the baggage car and was hustled up again in what seemed a few minutes with the information "We are there." As deep seven hours? I could not believe it, but was home nevertheless. On reaching my office urgent professional duties called me at once to the bedside of suffering humanity where after the proper ministrations I *meditated* again in an adjoining room in a rocking chair. Soon again I was in the impenetrable swamp where at every step countless myriads of mosquitoes rose around me. The dogs had all disappeared in a dense brake, the mosquitoes had grown to be veritable blood-thirsty woodcocks and hovered around me, screaming their wierd song as they sunk their long bog-sucking beaks deep into my flesh, while their big, deep eyes glared at me fiendishly as I struck them off with my tin canteen, for my gun and dogs and friends had hopelessly disappeared. I fought them, and called the dogs and my friends, until, bleeding from a thousand wounds I sank exhausted in the mud and mire and tangled grass. I awoke, and rubbing my eyes as the gray dawn peeped through the window, concluded that the hasty and hearty supper I had eaten while waiting for the home train was undigested. I walked home a wiser man, since I had seen woodcock under more varied circumstances in a shorter time than most sportsmen. I give you my experience now that I feel rested and somewhat cooled off, but still have grave doubts whether I had better not drop it in my waste basket. SOUTH FORK.

COURSING IN MONTANA.

DEER LODGE, Montana, June 26th, 1876.

EDITOR FOREST AND STREAM:—

I have been much interested in the "hare" discussion that has occasionally appeared in your journal since March 16th. We out here do have some amateur coursing that it would do your heart good to see. The jackrabbit or hare is very abundant in this valley (as in every other part of Montana) and when Col. Thornton, in his light spring wagon, and J. S. Pemberton, on horseback, start out with their fine greyhounds, the hares are out of luck, if they happen to be started on the plain far from the foot hills, for in that case they are most generally caught after a glorious chase, but if they succeed in reaching the foot hills they usually distance the fleetest dog, as they seem to go almost as fast up hill as on a level, which of course the dog cannot do. When a hare is started and the dogs are turned loose the Colonel becomes a sight. He gives forth a series of yells to encourage the dogs that startle the country for miles around, (for he is a giant and has a voice to match) and laying whip to his mules so as to keep the chase in view, the way that wagon bounds over the prairie (which is not always smooth) is a perfect terror to those luckless friends that he has taken with him to see the sport. We also have some splendid fox chases, as they are quite numerous here. If not caught by the hounds they usually take to their horrows after three or four hours run, and are often dug out by the hunters. One day the hounds started one, and after a couple of hours' chase the horsemen pressed him so close that he took refuge in a horrow that was so shallow that the hunters reached in and very carefully drew him out, intending to keep him a few days and then turn him loose for a chase, but to their astonishment he died in less than five minutes. As the weather was not warm, he must have died of sheer fright.

I wonder if it is generally known that there are two species, or perhaps varieties, of the great hare in Montana? One kind seems to inhabit the plains and foot hills. They are quite large, weighing, I should suppose, fifteen or twenty pounds. (I much regret not having weighed some of the larger ones that I have killed, and I now promise to do so in the future and let you know the result). They have large yellowish eyes, very much like a sheep's eye, are of a rather dark silver-gray color in summer and as white as snow in winter, except the tips of their ears, which are black. They sit in fours in summer and may burrow also, but I do not recollect seeing them enter their holes in summer. In winter they burrow, usually on the benches, or table lands. I do not know whether they dig their own burrows or take posession of abandoned badger holes, which are very numerous, and of about the same size as those inhabited by the hares. Many a time and oft have I seen them sitting on the bench lands, and while trying to approach within gunshot have them disappoint me by diving into their burrows.

The other kind I think are a little smaller, and only inhabit the pine forests and glades, and are distinguished by two points of great difference from the hare of the plains. The first of which is that their eyes are *jet black*, and when hunting them in winter those same black eyes are the first part of them that is seen, for owing to their snowy whiteness at that time of year, it takes a very keen vision to see any other part of them when sitting in the snow. The other difference consists in the relatively much greater size of their feet, which seems to be caused by considerable wads or bunches of hair which grows between each toe, thus spreading them wide apart. This peculiarity causes them to be called "snow-shoe jack-rabbits," from the fact of its enabling them to travel on top of the snow which falls to a great depth in the woods. These hares also burrow, and when alarmed, if near their holes, instantly dart into them. Both species are mostly nocturnal in their habits, rarely feeding by day. GRANTVILLE STUART.

CREEDMOOR.—Saturday's practice at Creedmoor comprised contests for the Geiger Badge and the prizes offered by Messrs. Schuyler, Hartley & Graham, for rapidity and accuracy in firing. The first event was shot at the long ranges, 20 shots at 1,000, 15 at 900 and 10 at 800 yards, bullseyes only counting. Mr. L. Weber was the winner, making 24 bullseyes and a score of 190 points. There were but eight competitors in all. The second match was fired at 200 yards, each competitor to fire as many shots as possible inside of half a minute, and to have two chances. Magazine guns to be used as single loaders. The following table shows the result,—

NAME.	1st half minute.			2d half minute.			Totals.		
	Shots fired.	Hits.	Score.	Shots fired.	Hits.	Score.	Shots.	Hits.	Score.
W. Robertson	8	5	18	8	7	19	16	12	37
A. B. Vanheusen	6	3	14	8	7	22	16	13	36

G. F. Merchant	5	1	7	5	0	0	10	2	7

*Fined 5 points for firing after time.

GLEN DRAKE.—Report of matches held at Glen Drake range, Saturday July 15th, 1876:—

GLEN DRAKE MATCH, 500 YARDS, 10 SCORING SHOTS.

Name.	Score.	Total.
David F. Davids, (winner)	5 3 5 5 3 4 3 4 3 5	40
Geo. Ferguson	3 3 5 5 3 2 4 3 3 5	36

SUBSCRIPTION MATCH, 500 YARDS, 5 SCORING SHOTS.

Geo. Ferguson, 1st prize	5 3 5 4 4	21
Geo. Ferguson, 2d prize	4 4 4 4 4	20
David F. Davids, 3d prize	4 2 3 4 5	18

The next regular match day is Saturday, August 5th. Shooting begins at two P. M.; matches short range, 300 yards.

CONNECTICUT.—At the Willowbrook rifle range, on Saturday, the only shooting was for the "bullseye badge," which had been taken once by C. S. Davidson, of Hartford, and once by Orange Judd, of Middletown. On Saturday Mr. Judd won it again, scoring six bullseyes out of twenty shots, ten at 800 yards, and 10 at 1,000 yards. Mr. Judd must win it again to hold it permanently. There were contestants Saturday from Middletown, New Haven, New Britain and Manchester, but none from Hartford.

MICHIGAN.—The Greenville Rifle Club met for practice on Wednesday, July 12th. The morning was very pleasant but the wind was somewhat shifty and troublesome. Considerable interest was manifested by the members as the club was divided into two teams for a friendly contest of skill. Distance 400 yards; no artificial rest allowed; seven shots each with a possible 35. The match was won by Capt. Hale's team by the following scores:—

Name.	Score.	Total.	Name.	Score.	Total.
Hale	3 4 4 5 5 5 4	30	Rossman	3 5 0 3 3 4 4	22
Sapp	5 4 3 5 5 3 4	29	Wright	5 4 3 5 0 2 4 3	22
Just	2 5 4 5 4 5 5	30	Jones	5 6 5 3 5 5 4	32
Spaulding	3 4 4 4 5 4 4	28	Woodman	5 5 5 4 4 4 5	32
Rowe	4 5 5 5 5 5 5	34	Nelson	4 4 5 3 3 3 0	22
Total		151	Total		130

ALABAMA.—The following is the score of 100 shots fired at an eighteen-ring target, distance 100 yards, Springfield army rifles, by two members of the 1st Regiment, Alabama volunteers, the highest attainable score being 900:—

W. B. HOLT. "CADETS."					W. TUNSTEAD, "RIFLES."

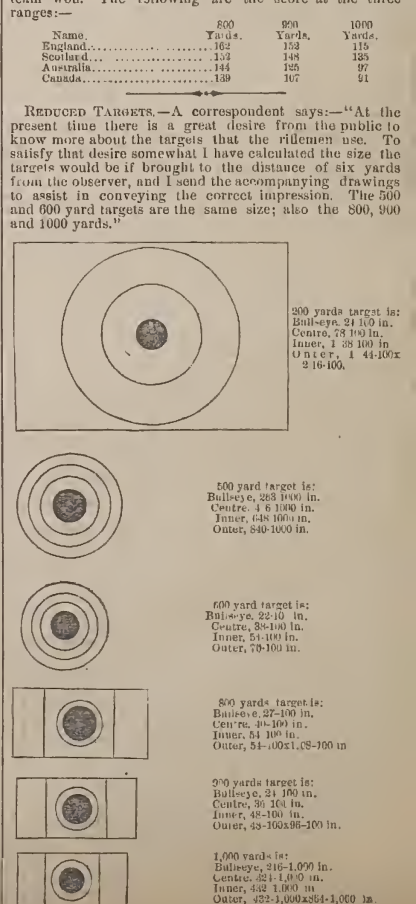
THE ELCHO SHIELD.—The fifteenth contest for the Elcho Shield, the great match of the British N. R. A. was shot on Wimbledon Common on the 25th inst. The conditions of the match were, 15 shots each at 800, 900, and 1,000 yards. The contestants were as follows:—



ENGLISH.	SCOTCH.	IRISH.
Lieut. Col. J. Fenton,	Edward Ross,	W. Rigby,
Lieut. W. Wyatt,	J. Clews,	J. Rigby,
Major Scriven,	M. Boyd,	Lt. Fenton
J. Baker,	R. H. W. Dunlop	E. Johnson,
H. S. Evans,	T. Whitelaw,	W. L. Joynt,
Lieut. Col. Radcliffe,	P. Rae,	G. D. Goff,
M. R. Smith,	N. Ferguson,	R. S. Greenhill,
Lieut. Col. Bertram.	R. McVittie.	M. Smyth.

At the first range the Scotch team led with a score of 504 points out of a possible 600, England having 489 and Ireland 479. At the next range Scotland held her own with 503 points, England improving a little with 490, while Ireland fell off 30 points from her 800 yards score, making but 449. At the 1,000 yards range the Scottish team became demoralized and fell to third place with 451 points, Ireland scoring 455, while England sprang to first place with 484 points, the totals standing: England, 1,463; Scotland, 1,458, and Ireland, 1,383. The result was received with much chagrin by the Scotch and Irish teams, each of whom had hopes of visiting America this fall as champions of Great Britain and holders of the Elcho Shield. Last year the Irish won with a score of 1,506 points, England's score being 1,502, and Scotland's 1,503.

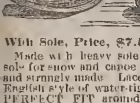
On the 22d the match between the English, Scotch, Australian, and Canadian teams, was concluded. The English team won. The following are the score at the three ranges:—

Name.	800 Yards.	900 Yards.	1000 Yards.
England	164	153	115
Scotland	152	148	135
Australia	144	125	97
Canada	139	107	91

REDUCED TARGETS.—A correspondent says:—"At the present time there is a great desire from the public to know more about the targets that the riflemen use. To satisfy that desire somewhat I have calculated the size the targets would be if brought to the distance of six yards from the observer, and I send the accompanying drawings to assist in conveying the correct impression. The 500 and 600 yard targets are the same size; also the 800, 900 and 1000 yards."

Thomson's

Oil Finished Grain Leather Shoe-Pack or Moccasin.



With Sole, Price, $7.50. Without Sole, $5.50.

Made with heavy sole for land use; also without sole for snow and canoe purposes. All hand sewed and strongly made. Laced in front with hooks (over English style of water-tight tongue), thereby securing PERFECT FIT around ankle, thus preventing all slipping at the heel. Made with broad soles and on scientific principles.

Fills the want long felt by sportsmen for an easy fitting and durable shoe.

In ordering, state size of boot worn. Sent by mail on receipt of price, with 40 cents additional for postage, or by express C. O. D. everywhere. Manufactured by THOMSON & SON, 338 Broadway, New York. Jn27-tf

Good's Oil Tanned Moccasins.

The best thing ever worn by sportsmen. Not injured by wetting and drying—always soft and easy to the feet. Four different styles. Prices to suit the times. Send for illustrated circular and price list. (Successor to Frank Good). MARTIN S. HUTCHINGS, P. O. Box 368 Dover, N. H. Jn27 tf

The Kennel.

The Infallible Fish Bait.

Having perfected a suitable Paste for Fish Bait, the undersigned offers same to the sporting fraternity, assuring them that it will prove more remunerative than any known substance for the purpose of angling. It is of a pale white color, square in form. By soaking in water a few seconds it becomes pliable. Taking a small piece, size of a pea, and pressing the same on or about the eye of the hook and using regular bait, any angler can kill to his heart's content. Price 2 cents each, post paid. Address JOS. LABADIE, Galveston, Texas. Jn6-3m

THE "FISHING LINE."

Brook Trout and Grayling Fisheries

OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

The waters of the Grand Traverse Region and the Au Sable, North Woods and Headwaters are unsurpassed, if equalled, in the great abundance and variety of fish contained.

Brook Trout abound in the streams, and the famous American Grayling is found only in these waters

Brook Trout Season opens May 1st.
Grayling season opens June 1st.

Black Bass, Pike, Pickerel, and Muscalonge are also found in large numbers in the many lakes and lakelets of this territory. The sportsman can readily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and bracing. The climate peculiarly beneficial to those enduring with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and attractive train facilities accorded to tourists and sportsmen; also on and after July 1st Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at owner's risk

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, Send to Forest and Stream office, or address

J. H. PAGE, G. P. & T. A.,
may4 4m Grand Rapids, Mich.

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road, radiating from Chicago, Like the fingers in a man's hand, its lines reach in all directions, and cover about all the country north, northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukee, and the country north thereof; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Negaunee and Marquette; with another line it passes through Madison, Elroy, and for St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kameska, Dakota, is reached; another line starts from Chicago and runs through Elgin and Rockford to Freeport, and, via the Illinois Central, reaches Warren, Galina and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction, to Council Bluffs and Omaha. This last named is the "GREAT TRANS-CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento, San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEESE AND BRANT SHOOTING, THE IOWA LINE AND KEY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and for Brook Trout, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of the company will be found unsurpassed by any in the West.

MARVIN HUGHITT, Gen. Supt., Chicago.
W. H. STENNETT, Gen. Pass. Agt., Chicago.
ap16

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMP'Y

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of resh ipment, while the excellent cars run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

The lines of

The Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS may be had at the offices of the Company in all the principal cities to KANE, RENOVA, BRADFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEECH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST noted for FALT WATER SPORT AFTER FIN AND FEATHER.

D. M. BOYD, JR., Gen'l Pass. Agent.
FRANK THOMPSON, Gen'l Manager. feb17 tf

ALL ABOUT FLORIDA. NO QUESTION can be asked about Florida, her lands, products, health, climate, resources, labor, population, &c., that is not answered in the FLORIDA NEW-YORKER. It is edited by a gentleman who has lived there over 25 years, is a practical farmer and a fine writer. Published weekly, by the FLORIDA NEW-YORKER Publishing Co., 22 Beekman-st., N. Y. City, at $2 per Annum, or Single Copy, 10 cents. Jn6 tf

The Goss Revolving Cartridge Holder

CARRIES PAPER OR METALLIC SHELLS, either end up, revolves on centre strikes, weighs but ¼ pounds, and is only ¼ inches wide. Holders flare at top so as to quickly receive the shells, and, being elastic, *securely* clasp the same. For ease of action and rapid shooting it excels anything of the kind invented.

PRICE, C. O. D., $6.50.

In ordering, give the size of shells and a *loose* measurement outside of vest.

Paper and Metallic Shells

FOR

Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dec23 tf

New Paper Shell, Conical Base.

(WILLIAMS PATENT.)

MANUFACTURED BY THE

St. Louis Patent Shell Manufacturing Co.,

Office 209 North Fourth st.

The advantages claimed for these shells are—Cheapness, a saving of 25 PER CENT IN THE USE OF POWDER, less recoil, greater penetration. The best material is used in their manufacture, and they will be found a first-class Shell, equal in quality to the highest priced English Shells. Sizes made are No. 10, 2½; No. 12, 2¾ in., central fire. Longer Shells made to order at extra cost. Ask your gun dealer for these, and buy no others. P. S.—The No. 12 Shell will not be for sale until August 1st. jul13 4t

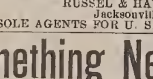
BREECH LOADERS,

CHELTENHAM, ENGLAND,

Are unsurpassed for material, workmanship, durability, and shooting qualities. Their superiority in shooting power has been shown wherever tested in this country and in England, standing first, second, and third at the New York trial in 1873; also the highest average at the London *Field* trial in 1875. A case of these guns made to order for sportsmen, and taken from stock, are shown at the Centennial Exhibition, Philadelphia, British Department. Prices, $45 to $250, currency. Those wanting a SUPERIOR gun at a MODERATE cost send for descriptive circular and price list to RUSSEL & HAYDENS,



Jacksonville, Illinois.

TESTIMONIALS.

From Hon. J. T. Headley, the Historian, Author of "Adirondack, or Life in the Woods," &c.

It is admirably written, and has just enough of humor, sentiment, and description of scenery mixed, to make it delightful. The illustrations are well chosen and very effective, while the instructions respecting routes, localities, distances, outfits, &c., embrace everything that can be desired. Taking it all in all, it is the most complete book that has been published on the Adirondacks, not excepting even my own—a compliment that I trust will be properly appreciated for its extraordinary disinterestedness.

From Albert B. Street, the Poet, and Author of "Woods and Waters," "The Indian Pass," &c.

I think it is the *best* work on the forest that has appeared—superior in word-painting to Murray's, and full of wood pictures and vivid scenes of camp-life. We realize that we are in the forest, are living with you in the scenes described, and that the trees are waving and the waters flowing over and by us. This, I think, the true test of a good book, impressing its reality and distinctive life on the mind. As a "Guide Book," it is most creditable and valuable. Indeed, it is the *only* thing of the kind that has yet been published—the very thing that has been so long wanted and waited for. It must have cost you intense application and labor. You may well be content that you have produced a good book.

From Benson J. Lossing, the Historian.

I have read those portions descriptive of the places which came under my personal observation, with the deepest interest, and most cheerfully testify to the general accuracy of your pictures as I recall impressions made of them at the dates of my visits. I regard your "Descriptive Guide" and the "Appendix" as a most useful—nay, indispensable, manual for tourists to that wonderful Wilderness. A tour in that region is eminently a practical matter, and for that reason I regard your "Guide" as an important, useful, and timely publication.

BUY IT Vanity Fair.

It is shaved from the best Natural Leaf, for Meerschaum and Cigarettes. Does not make the tongue sore. Sample on receipt of 20 cents. Highest award, Vienna, 1873. Send for circular. WM. S. KIMBALL & CO.,

PEERLESS TOBACCO WORKS, Rochester, N. Y.

From Seth Green, Supt. N. Y. State Fisheries.

I find Vanity Fair to be the best article of tobacco adapted to the wants of the sportsman. Have used your tobaccos for many years, and know them all to be first-class.

For Sportsmen.

A trusty friend, in weariness or trouble; a solid resource in Winter and rough weather, is a sweet pipe with Vanity Fair. Best dealers have it.

From A. B. Lamberton, Rochester.

Having smoked your tobacco, Vanity Fair, by the camp fire and by the hearth, I believe it in point of fragrance and taste superior to all brands known to me. Being in search of a tobacco that would not fire the tongue and mouth, I was made acquainted with your Vanity Fair, and found it to be the *ne plus ultra* of natural leaf.

For Cigarettes.

A cigarette is an interlude to the serious habit; a graceful make believe for spare hours. For cigarettes Vanity Fair has no equal. Best dealers have it.

From Forest and Stream, N. Y.

We have received from Messrs. Kimball & Co., of Rochester, some choice specimens of their celebrated Vanity Fair tobacco in neat metal cases holding a pound each; and, after most thorough trial, do not hesitate to concede to it all the good qualities which its manufacturers claim for it. It is a most superior article, and a great comfort to discriminating smokers.

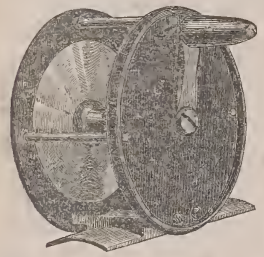
THE ORVIS REEL.

The Most Compact, Neatest, Cheapest, and Durable Reel in the Market.



NO 1.—This Reel is extra nickel-plated and finely finished. Is perforated to make it light, and keep it free from sand also that the line may dry without removing it from the reel after use. Has a very perfect click. It is very light, very strong, and holds from 40 to 50 yards of line. It is more compact and less cumbersome than ordinary 20 yard reels. It is quite narrow, and takes up line rapidly. Put up in neat Black Walnut Case, price $5.

NO 2—For Prizes. Same style as No 1. Heavy Gold Plate. Extra finish, with case, price $10.

Sent by mail, postage prepaid, on receipt of price, or by express, C. O. D. LIBERAL DISCOUNT TO THE TRADE. Send for New Price List of Fishing Rods, Reels, Flies, Lines, &c., &c. Mention this paper.

H. L. DUNCKLEE'S

PATENT

CAMPING and MINING

STOVE.

PATENTED JUNE 22, 1875.

Outside dimensions, packed, 12x12x30 inches.

Weighing only 35 pounds, very durable, will cook for ten persons, and is especially adapted for camping purposes. The ware consists of 8 qt. kettle, 6 qt. tea kettle, 2 qt. coffee pot, fry pan, round tin pan, 2 square pans, dipper, gridiron, tent collar, 8 ft. funnel, and no oven that will roast 15 pounds beef.

The ware is so constructed that it nests and packs in the oven, and the oven and funnel pack inside the stove, as represented in cut 2, leaving room for packing half a dozen plates, knives, forks, spoons, and drinking cups. Price complete, $15.

THE NEW

BOSTON SHOOTING SUIT,

Manufactured only by

G. W. SIMMONS & SON,

Boston, Mass.

We offer this season an entirely new design of WATER-PROOF SHOOTING SUIT (made from extra quality duck), in the preparation of which we have been assisted by the advice and suggestions of our best resident sportsmen.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, the arm holes ventilated, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at $13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloons.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the *Golden Rule* (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skilfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, waterproof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Waist Measure, Height, Breast Measure, Length of Sleeve, Size of Head.

W. H. HOLABIRD

Would most respectfully announce to his patrons and friends that he is prepared to make

Shooting and Fishing Suits

at the above prices. The ten dollar suit is better made than any competitor can offer for the same money. My original design having been appropriated by other manufacturers I have been compelled to make many changes in the arrangement of pockets, &c., for which I have to thank the fraternity at large for suggestions. I believe that I have the

BEST SHOOTING AND FISHING COATS IN THE WORLD,

and respectfully solicit your orders. I send my new illustrated Catalogue, 16 pages, free on application.

Dealers will find it to their advantage to handle my goods. They are better known and more highly esteemed than any other make.

THE

PAPER STEM PIPE.

Just the Thing for Home and Camp Use.

Supplies a want which smokers have long felt—a pipe which shall give simply the taste and odor of tobacco smoke. This pipe never accumulates rank smelling liquid in stem or bowl, but is always clean and sweet. The bowl and mouthpiece are permanent, but the stem is of porous paper, to be laid aside after a few days' use and a new one fitted. Extra stems accompany each pipe. The price of extra stems, when not furnished with the pipe, is as follows: Four and a half and seven inches, 5c.; twelve inches, 15c. Sold by pipe and cigar dealers generally, or a complete sample sent by mail for $1 by

CHAMPION GUNS OF ENGLAND.

PAPE'S

Unrivalled Sporting Guns.

Stand unequalled in every contest. Their performance at the London Trials of 1875 beats the records of any maker in the world.

1875. 12-Gauge, Choke Boring.
Maker of Gun. Exhibitor.
1st—Greener.....Greener.
2d—Pape.....Davidson.
3d—Pape.....Pape.

Out of a class of 68 guns, 8 out of the 6 best were made by Pape. The Greener gun was protested against on the spot for having its score false counted, the fact proven there, and afterwards confirmed by same gun being shot for two days per week for six weeks in succession, when its average score only took 24th place, its very best score being greatly below the scores of the best six guns.

1875. 12-Gauge, Old Sporting Bore.
Maker of Gun. Exhibitor.
1st—Pape.....Davidson.
2d—Pape.....Davidson.

1875. Long Range, 60 yards, Choke Bores.
1st—Pape.....Davidson
60 yards, Long Range, Sporting Boring.
1st—Pape.....Davidson

Those champion Long Range guns, only 7 pound weight, with a charge of 3¼ dr. to 1½ oz. shot, beat the best a bore Greener gun at 60 yards; weight, 15 lbs.; 6 drachms and 2¼ oz. shot.

1875. The Sportsman's Snh. Cup, valued at £45, was also awarded to W. R. Pape, for the original invention of choke boring, Winner of the London Gun Trials of 1853. 1859, 1866. Address

THE GREAT

London Gun Trial,

1875.

W. W. GREENER'S
Far-Killing Prize Guns.

Winner of Silver Cup, value 40 guineas. Winner in Class 1, for 8 and 10 bores. Winner in Class 4, for 20 bores. Winner in the Wear and Tear Trials, July, 1875. 2,500 shots fired without deterioration.

W. W. G. is the only maker who has made an average pattern of 214 shots in a 30-inch circle, at 40 yards, with a 12-bore gun, at any public trial either in England or America.

I have just received a consignment of these guns, and shall offer to individual sportsmen, for a short time, an opportunity to secure one of these celebrated guns at a popular price, viz: $75, gold; extra for extreme close shooting, $10. This will probably be the last chance to secure one of these guns at these very low figures. All grades and styles in stock or imported to order.

Attention is also called to my stock of guns, by W. & C. Scott & Sons, which includes all their latest improvements. No old style guns in stock.

Sole New York Agent for Holabird's Hunting and Fishing Suits. Trade supplied.

Send 25 cents for large Illustrated Catalogue of Guns, and including Game Laws for all the States, and summary of Great London Gun Trial. Ready March 1st. jan13 1y

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

FOREST AND STREAM

Terms, Five Dollars a Year. Ten Cents a Copy.

NEW YORK, THURSDAY, AUGUST 3, 1876.

Volume 6, Number 26. 17 Chatham St. (City Hall Sqr.)

For Forest and Stream.

White Mountains of Arizona.

AT an altitude of 6,500 feet, the atmosphere is not very warm in October, and to be unceremoniously pulled out of your blankets, with the remark that your mule is saddled and waiting for you to mount, is to say the least, provoking, particularly when you were enjoying dreams of home and loved ones. Obedient to orders, however, I soon donned my shooting suit and bidding my striker roll my blankets, and strap them to the saddle, proceeded to the mess room to brace up the inner man, for we were to be gone, none of us could tell how long. We, the Lieutenant and myself, had arranged the day before to go high up in the White Mountains, where some Indians had, a few days before, killed a couple of elk, to see if we could have the good luck to bring down a few more. It was arranged that we should take a train of a dozen pack mules in charge of the head packer, which with the cargodore, cook, and two Apache Indians, as guides, all well mounted on first class mules, made quite a cavalcade. Our route lay northwest from the Post, distant about thirty miles. Lieut. B. (who, by the way, is a glorious young fellow, and a crack shot, both with rifle and shot gun,) was in command of the out-fit. After doing justice to a good breakfast, (being frequently hurried up) I took down my Winchester and laying in an extra stock of cartridges (for I supposed I should certainly kill a dozen elk) announced myself as ready. We were soon out of sight of the Post and its strict commanding officers, and breathing the pure mountain air felt free, and we also felt that the expedition was one in which our reputations were at stake. The Lieutenant and myself rode in advance, followed by the Indians, after which came the train of animals. Being a visitor as it were, the charge of providing the out-fit was left entirely to the Lieutenant, who now assumed the rank of Commanding Officer, Quartermaster, Commissary,—well, in fact, he was everything, and I was simply a passenger. Right well did he perform all the duties of his respective offices, and should I ever go again upon another elk hunt, I want no better companion, or commander than this same Lieutenant. We had ridden about ten miles over a terribly rough trail, stopping occasionally to readjust some pack which the mule had concluded was more than he wanted to carry, and hence took the liberty of rubbing his load against a tree, merely to see if he could not get rid of a portion, for I tell you a pack mule is a cunning fellow, and it takes close watching of the packer and cargodore to prevent him from playing some trick that will cause delay. As I said before, we had proceeded about ten miles, when one of the Indians slipped quietly off his animal and rushed down a steep declivity, jumped across a streamlet and with the same gait mounted another mountain on the opposite side. When approaching the summit, he was observed to drop upon his knee, and simultaneously with the act his rifle reported that game of some kind had felt the weight of a 45 bullet. He seemed to be in no hurry, as he was carelessly dropping another cartridge into his muzzle gun, when he leisurly walked about 150 yards and picked up a magnificent turkey gobbler. The Lieutenant concluded we had better ride down to the stream and roast that turkey for our dinner, so without any more coercion I turned off and took the zig-zag trail for the bottom, here we unsaddled, and in less time than it has taken me to write it, every pack was off and in their proper places, and a nice fire was started. Did any of my readers ever roast a twenty-five pound turkey in the woods without a range or stove? If not, then "half his life is gone." The process is a simple one. In front of the fire, and at a proper distance, two forked sticks are driven into the ground, said sticks being about fifteen inches high, and two feet apart; a little farther back from these, six or eight inches, two more forked sticks are driven into the ground, but these are about thirty inches in height, and four feet apart; a pole is laid across the top, and from this pole to the ground at an angle of about 45° bark is placed, which acts as a reflector. After the turkey is properly dressed an iron ramrod is passed through his carcase, and each end (beyond the bird) is rested upon the crotch of the two shorter sticks, a pan is placed underneath, and the cook constantly turns the bird, at the same time basting with the drippings. Ye gods! it makes me smack my lips to think of that turkey. I never knew before, how much turkey a man could eat, in fact I don't know yet; all I can say is, that what was left would not feed an infant.

We were soon again in the saddle, and were hurrying to get to a good camping ground on the White River and pitch the tents before dark. I was riding some paces in advance (thinking over that turkey) when I was aroused from my reverie by the close proximity to my head of a rifle bullet, turning suddenly in my saddle, with the remark "What in thunder, Lieutenant, are you shooting so close to me for?" "Well," says he, "I'll tell you, if I had not shot just as I did, a big four-prouged buck would have brought you in here, and I would have *had to shoot you.*" "Thank you sir, for your kind consideration, but drive your bucks in the future the other way." The truth was, the buck (and he was a fine one) would probably have run over me, without my having seen him at all, only for the kindness of the Lieutenant. By the time we had him dressed and packed, it was getting time for us to go into camp, and while this was being done, I went out on foot to see what luck I would have, and had the fortune to kill two more turkeys, and here let me add, it is not well to kill many turkeys when you are on foot. If ever I was tempted to utter cuss words, it was when packing two turkeys and a rifle, over a mountain trail, but by self command I utterly refrained, and toted them to camp without a complaint, or ugly thought. For the first time I had the oportunity of judging of the qualifications of the Quartermaster, Commissary and caterer's ability, and do hereby declare him to be a success. It could be more easily told what he *did'nt* have, than what he *did have*, but suffice it to say, I was perfectly satisfied, that if we shot nothing more, we could stay out a month. After stuffing ourselves with commissary stores, turkey, venison, etc., we filled our pipes (and let me ask of you as a favor to thank in my name W. S. Kimball & Co. for inventing Vanity Fair,) and lounged before a rousing fire, telling our stories and jokes until the snoring of the Indians reminded us that the time had arrived for us to turn in.

By daylight the next morning we were astir and within an hour were again on the march. The country had now become more rugged, if such could possibly be, and it was one continuous down, down, down a precipitous mountain side, or up, up, up to a giddy, dizzy height only to find mountains still higher before you. The deer tracks were now becoming more abundant, and an occasional deer was seen that was getting out of our way, having had sufficient warning by the noise made not only by ourselves, but the tread and tramp of the pack train over the rocks. It was enought to have startled a herd of deer for a mile off. We hoped that this day's march, would bring us to the snow, where the elk had been killed by the Indians, consequently we were not particular about keeping quiet, in fact we wanted it understood by the denizens of the forest, that *we* were there, and that to-morrow the battle would commence. Darkness had overtaken us before we arrived at the proper place, and whew! how cold it was, and how hard the wind did blow. We did'nt promenade much that night, but after eating a hearty meal and enjoying Vanity Fair, snugly cusconsed ourselves between three pairs of heavy three-point blankets, and were soon dreaming of to-morrow.

It came at last, cold as was desirable, but no wind. I never felt brighter, fresher, or better nerved than I did that morning. I felt that a deer at 300 yards was my game, and the close of the day proved my feeling to have been correct. We each took an Indian guide and I had not gone more than a mile before I started a deer. Dropping my rifle, I saw another, and another, and another, until I became puzzled which one to shoot at. I knew that this indecision was producing the buck ague, yet for the life of me I could not overcome it, until my Indian, fearing that they would all get away from me, fired and brought down his game. My nerves by this time were settled and in the next moment I had gotten down well in the hind sight, and at 300 yards a noble buck dropped in his tracks, while another with nostrils distended, and with his head half bent towards his fallen comrade, received his quietus; without moving a yard I sent a third one to grass, and this red man of the forest had been my equal. It seemed as if it were to be a contest "as to rapidity of firing," between my Winchester and his needle gun, (and I can assure you he could drop a single cartridge into that needle gun mighty fast, but I had the advantage in the long run. He began to get excited, the *Indian* was coming to the surface very plainly, his nostrils too were distended, eyes bright as meteors, and only when they were out of reach did he settle down to his former self. With the remark of en-*ju*, meaning good. Yes, said I, good. I've got three, how many have you got? "Toggy," said he—(Apache for three). We had six deer and it was not yet eight o'clock. We soon had them dressed and hung in trees, and during the balance of the day, it was a constant firing. About three o'clock I saw the Lieutenant slowly riding in my direction, and soon overtaking him began a comparison of results, which did not result unfavorably to your humble servant; he said he had seen a number of tracks of the elk, all directed higher up the mountain, so it was resolved that the next day should be devoted to elk, as we had deer enough. In returning to camp we ran into large flocks of turkeys, and soon bagged a dozen; they were not as wild as those of the day before.

By the time the packers and Indians had gathered into camp all the game, it was quite dark, and then for the first time I felt that I was tired, completely tired out, but Oh ye gods! what a bag of game. There hung eleven deer, and thirteen turkeys. 'Tis true there were four of us at the triggers, yet that leaves a good average of six. I wish the "Squire" could have been along, although he is now old, I think it would have rejuvenated him. While plodding through the snow the next day, the Lieutenant says, "I'll tell you Colonel, this is infernal cold work." "Well, to confess the truth, Lieutenant, it is pretty cold, but you should not have left your saddle, and walked in the snow, but should merely have slipped your feet out of the stirrups and your legs by hanging would soon have started circulation, and then you would have been all right."

With an inward chuckle, I rode on cheering him up, teasing him; a novel way, I fancy I hear you say, but if you want to make a man sick, tell him he looks so, and ten to one he does feel so in less than an hour. It soon became evident that elk were in our vicinity, and by careful watching and working, the Lieutenant had the pleasure of getting a shot; he hit him hard, but not enough to stop him there; in coming up to where he stood, blood marks told the story, the shot had taken effect too far back, he was bleeding internally. We followed on, and soon his tracks began to diverge from a direct line. The Indian said he was looking for a place to lie down, and with a grunt, said "much bas-i-*tee*," meaning much sick, which proved to be a fact, for he soon jumped up out of a tree top (fallen) and by his unsteady gait satisfied us that he was fighting hard for life. We followed on for about a mile, when we came up with his dead form, which was very handsome and noble, even in death.

We had now been traveling constantly up the mountain, the snow becoming deeper as we advanced, when it was determined that we should return to camp. I was somewhat annoyed that I had not killed my elk, but hoped on. Upon the return the Lieutenant killed (dead) another fine fellow, and I can assure you this made me furious, for, kill my elk, I was bound to, but man proposes and God disposes, I did not kill an elk that trip. We both concluded we would try our luck again below the snow line, at the deer and turkeys. We kept up the work for three more days. The sport became so splendid that the packers desired to join in, which being granted, increased our triggers to six.

It was soon time to return, but now the question was, what will we do with the game, the mules cannot pack it all, so packing all we could, and hanging the rest high out

of the reach of other animals, we started upon our return march. Our bag consisted of fifty-seven deer, two elk, and over fifty turkeys. Upon arriving at camp another pack train was sent for the balance.

I shall never forget my first elk hunt.

M. E. MORFORD.

THE MAD WOLF.

A TRUE STORY OF A TRAPPER'S FATE.

BY CAVALIER.

HYDROPHOBIA, though fortunately a disease of rare occurrence in man, is one of the most recondite and least understood in the whole range of fleshly ills. It is, indeed, given up by medical authorities as utterly incurable after the symptoms once set in, the only remedies being of a preventive and not of a curative character. The wolf, the dog, the fox, the jackal and the cat seem most liable to contract the disease, though it occasionally occurs in other animals, its appearance, according to Eckel, being most frequent in the months of February and May, though popular belief has laid hold upon the latter heats of summer, or the dog-days, as the season in which this horrible malady is most to be apprehended. Its origin, when *de novo*, is little understood; but intense thirst, sudden changes from heat to cold, bad food, and unsatisfied sexual desires have all been assigned as causes for its appearance in animals; but in man it is invariably, and in animals most commonly, the result of contagion. When contracted by man it is usually from the bites of rabid dogs, but fortunately such wounds in most cases heal without any serious consequences, but one person in twenty or thirty bitten, according to Hunter and Vaughn, taking the disease. The bites inflicted by mad wolves are more certainly fatal, Watson mentioning sixty-seven deaths by hydrophobia out of one hundred and fourteen bites. The greater virulence of wolf bites is accounted for by wolves usually biting at the naked parts, whereas dogs nearly always bite through the clothing, the poisonous saliva thus being wiped from the teeth before they enter the flesh.

But I set out to tell a story, not to write a medical essay, though so much on a subject illustrated by my story seemed not inappropriate by way of introduction.

Among the tales with which in the hey-day of the American fur trade the story-telling trappers were wont to beguile the evening hours by their camp-fires, were those of wolves having gone mad upon the prairie, crept by night into the camp of the sleeping trapper, and inflicted bites from which the victim, after lingering through days of suffering, died in terrible agony. Many such stories were current in the olden time, and not even an Indian alarm could rouse the sleeping trapper so quickly from his slumbers, and cause him to clutch with such fierceness the ever ready rifle, as the cry, resounding through the camp in the stillness of the night: "Mad wolf! mad wolf!"

About the first of August, 1832, the rival camps of the several fur companies then contending for the supremacy in the west, were clustered near each other in the valley of the Green River. One night a mad wolf entered the camp of Fontenelle, who represented the interest of the American Fur Company, and passing rapidly by the recumbent and sleeping men, inflicted upon several a slight bite, proceeded among the horses, several of which it bit, and escaped in the darkness. The alarm was spread to all the camps, and the following day a number of tents were erected by the more prudent men for their better protection should the wolf return. In the camp of Fitzpatrick and Campbell, five miles distant from that of Fontenelle, but one tent was pitched, the occupants all night barricading the entrance with pack-saddles; but as the nights were pleasant the remainder of the men preferred to take their chances in the open air, laughing at and joking their more prudent companions not a little for the precautions they had taken. Night came, and silence fell upon the camp, only broken at intervals of twenty minutes, when the chief of the guard sounded the cry of "All's well!" which was taken up and repeated successively by the drowsy sentinels, who, forbidden by the rules of the camp to pace their beats, lest they should be made a target for the feathered shafts of unseen foes, could scarcely keep awake in the recumbent or sitting postures they were required to maintain in some dark nook on the verge of the camp. But presently a shaggy form steals past the nodding sentinels, and reaches undiscovered the centre of the camp. It approaches the sleeping form of George Howe, who, wrapped in his blanket and resting on his left side, leaves quite unprotected his right ear and cheek. Snapping at the exposed face, the shaggy intruder inflicts a severe wound, rousing Howe rudely from his slumbers with the cry on his lips: "Ho! I am bitten! a mad wolf!" "A mad wolf! a mad wolf!" echoed the now aroused sentinels, and every man leaped to his feet in consternation. But the wolf sprang quickly upon two other men and bit them in the face ere they could rise, and then, favored by the confusion and the darkness, effected its escape. The next morning mounted men scoured the plain in every direction in search of the rabid monster, but without avail; he seemed to have gone quite off, and further apprehension was quieted. In consequence no additional precautions were taken the ensuing nights; but again, about midnight, the cry of "Mad wolf!" rang through the camp. This time the creature was among the cattle, and fled after having severely bitten a fine, large bull, which was destined for Fort William, at the mouth of the Yellowstone, to be employed in breeding. The wolf might have been killed upon this occasion, but for fear of accidents orders had been given not to fire in camp; he was, however, not long afterward shot and killed by Fontenelle's men.

A few days subsequent to these events, Fontenelle and Campbell broke camp and started for the Big Horn River, the latter on his way east with the year's accumulation of peltries, the former to escort him as far as the river named. The bull that had been bitten appeared to be doing well, and Howe's wounds were rapidly healing; but when some two days' march from the Big Horn, the bull commenced to behave strangely, indulging in protracted fits of fierce bellowing, the while foaming at the mouth and pawing the ground with violence. It was evident that he was going mad, and poor Howe became dreadfully alarmed for himself. He was a young man from New York, of good family, and well educated, and had sought the west and adopted the trapper's vocation, impelled solely by the spirit of adventure which leads so many young men to make sacrifices of the advantages of a good home and the companionship of friends to plunge into a life of hardship and danger. Howe had, among other trappers, an excellent friend named Larpenteur, then quite a young man, who subsequently passed forty years on the plains, and became well known upon the frontier. As they marched along together, witnesses of the mad antics and bellowings of the bull, Howe, with white face and trembling voice, would say: "Larpenteur, don't you hear the bull? He is going mad. I am beginning to get frightened. Do you think I shall go mad?" Then, relapsing into painful thought on the horrible prospect, he would ere long again break silence in a piteous appeal to his friend for the comforting assurance that he should probably escape so dreadful a fate. Larpenteur, with a heart wrung with affectionate sympathy, made to these queries in a voice of forced steadiness as consoling a reply as he might; but with the conviction in his heart that Howe was doomed, his words but feebly concealed his own forebodings. The Big Horn was reached. Campbell's party, including Larpenteur, fell to work upon the boats of skins in which they were to float down the Big Horn and Yellowstone to the Missouri, while Fontenelle turned to scatter his band through the beaver grounds to begin the season's trapping. Howe returned with Fontenelle, and thus did not witness the death of the bull, which occurred soon after from a well developed case of hydrophobia. But poor Howe was constantly tortured with dread; he seemed impressed with the hopelessness of his escape, and bitter and terrible were his reflections at the prospect of thus miserably perishing far from home and friends—friends who might never know his fate. Alas! that he had ever left them! Would that upon this August day he might stand again within hearing of the voices of the dear ones at that door—the door of his father's house—out of which, not many months before, he had joyously passed, seeking adventure, and only achieving an end like this! Would that the brown and treeless prairie which he now traversed in such despondency and horror, might be replaced by the green grass upon which he had gamboled in boyhood, and the leafy coverts whose graceful shade had sheltered him from the summer heats on many a day like this!

But let us dwell no longer upon his sufferings. This mental anguish, this dread of the impending fate—one of the earliest symptoms of hydrophobia—was soon followed by other symptoms more pronounced. He would turn pale at sight of the small streams on the route, crossed them with trembling, and finally, overcome by his dread of water, dared not cross them at all. It became necessary to cover him with a blanket and carry him across, the mere sight of water throwing him into convulsions. At length it became difficult to get him along at all, and one afternoon, not far from the proposed camping ground, he was left behind in care of two men until he should recover from a fit into which he had fallen. The attendants soon wearied of their task, and came into camp without him. Fontenelle immediately sent back a party to bring him in, but when they arrived at the spot where he had been left they found only the torn remnants of his clothing, which he had evidently stripped off in his paroxysms, and then fled naked into the wilderness. He was never found, and undoubtedly perished miserably in this forlorn condition, without a companion to solace his dying moments, or a friendly hand to bury his remains.

Fort Shaw, Montana, February 15th, 1876.

For Forest and Stream.

MY FIRST TURKEY HUNT.

WHEN we first moved down on Green River, Kentucky, where we now reside, people told us that there were a good many turkeys near our place; that they used to forage around the fence only a short distance from the house. I was then a youth of eighteen; never saw nor hunted anything larger than quail, rabbits, &c., having always lived in a thickly settled part of the State, and as might be expected I was on the *qui vive* for turkey every time I chanced to go out any distance. When I went out in the woods or fields I took my gun along expecting to find an old gobbler sitting on most every stump waiting for me to pop him over. It did not take long, though, to convince me of my error, and to find that if I wanted a turkey I would have to hunt for it the same as other game. In the latter part of the winter my father hired a long, lank specimen of the genus *homo* by the name of Sam, who assumed to be a mighty hunter, had trapped in Arkansas, and had killed more turkeys than he could carry lots of times. His stories of turkey hunting only increased my desire to draw a bead on one of those noble birds. We shouldered our guns one afternoon, and I struck out into the "flats." There had been a snow fall of a couple of inches in the forenoon, and Sam prophesied a turkey sure. We tramped about for something near an hour, when all at once Sam declared he saw one. After warning me to make as little noise as possible he commenced slipping on the object, while I followed close to his heels. After getting within gun shot we found it to be only a black log, much to Sam's chagrin. After walking a mile or two further we came to a large hollow log, in which the snow had blown several feet, and there, fresh in the new fallen snow, was a turkey track, made on entering the log. Sam squatted down before the hole, and after squatting a while declared he saw it, at the same time leveling his rifle. After taking deliberate aim he cut loose, but as no sound was heard indicating success of the shot he called for my gun, which, by the way, was an army musket, and I handed it to him, which, after aiming with great pains, sent a handfull of B. B.'s crashing through the other end of the log. Sam laid the guns down and commenced peering into the log.

"See him, Sam?" says I. "No; but I hear him. Crawl in and get it," replied Sam.

I came closer and looked in. The log was full of smoke, and so dark I could not see two feet from the end, and as I thought not very inviting I declined going in.

"Go in and get your turkey," urged Sam.

I replied by telling him to go in himself, which for some reason I could not account for, he refused to do. I went down the log towards the opposite end, and finding a soft place applied the toe of my boot with considerable vigor, and soon had a hole into the hollow. I called Sam, and while he proceed to enlarge the hole, I commenced loading my gun to be ready in case of emergency. Sam tore up the log several feet, and presently yelled out "Here he is—come pull him out."

I looked, and sure enough there was something.

"Why don't you come pull it out," asked Sam again.

I began to get suspicious and to think something was wrong or Sam would take hold himself. After finding I would not drag out game shot by someone else, Sam cautiously ran his arm in and caught the turkey by the tail feathers, and drew it forth and deposited it on the ground; yes, a sure enough *turkey*, but surnamed *buzzard*. Sam's face was a study as he eyed the bird, literally cut to pieces. It blew or hissed something like a goose for a while, and after flapping about sometime flew off. Sam and I watched the ill-fated carrion eater out of sight before either of us spoke.

We silently shouldered our guns and wended our way homeward, finding no more game. As if by mutual consent neither of us mentioned the circumstance after arriving home, not caring to be the butt of so good a joke. Since that snowy afternoon I have caused many a turkey to "bite the dust," and have in my possession a beard measuring 10½ inches that I took off an old gobbler I killed not far from the seat of that adventure. And I have always found that when a man kills a turkey, no matter where, he is always willing to go after it.

PADDY O'LEARY.

Fish Culture.

FISH CULTURE IN NEW YORK.

EIGHTH ANNUAL REPORT OF THE STATE COMMISSION—GRATIFYING PROGRESS.

THE eighth Annual Report of the Fish Commission of this State has just been printed as a public document. It records operations down to June 1st.

Shad-hatching is first considered, and the results are said to be highly gratifying. There were artificially impregnated 4,684,000 eggs and 4,580,000 shad were turned loose in the Hudson River, between May 21st and June 28th. The yield of mature shad showed a fair percentage of the number hatched, and the effect upon the market is more and more noticeable, indicating a steady increase in supply. As usual, there is a criminal greed manifested by fishermen along the Hudson, who will not consent to cease operating on Sunday. As matters stand at present in every part of that river, stakes, nets, drift nets, pounds and seines intercept the passage of the fish at every step, and the fact that one is able to ascend is almost miraculous. This is the great difficulty the Commissioners have to contend with, and they urge as an imperative necessity the compelling by law of a cessation of fishing on Sunday. Of the shad-fry distributed New York received the larger portion, but 75,000 young shad were shipped to Scioto River, Ohio; 75,000 to Muskingum River, Ohio; 90,000 to Des Moines River, Ohio; 100,000 to White River, Indiana; and 100,000 to Texas. Previous experiments in this direction encourage the belief that a successful result may be predicted, as the shad which had been deposited in the Cayuga, Oswego and Genesee Rivers of this State have often been taken of marketable size, and would have been abundant were it not for the "eel-weirs," by which thousands of young shad are captured and destroyed before maturity. Legislation is needed here also. At the lower end of Lake Ontario the young are enormously abundant. The Commissioners say:—

"Further investigation confirm the views expressed in previous reports, that shad never wander far from the months of the rivers where they are bred, and invariably return to them to spawn. When hatched they drop down the river with the current, possibly waiting until the following year before entering the sea. Fish form no exception to the rule of irregularity in growth; some will obtain the start of others, and maintain it at the expense of their less fortunate brethren. The larger, better able to appropriate food, keep growing, while the weakly and puny, incapable of bearing their part in the struggle for existence, suffer accordingly. The shad do not differ greatly in this respect from the salmon, since the young of the latter, although born on the same day, never go to the salt water all at once; so the young of the shad are often found in the river some months, at least, after they are born. It has even happened that shad of six inches in length have been found filled with spawn, although it is ascertained that usually they require three years to mature their ova."

Encouraging progress has been made with black bass. The ova of this fish cannot be subjected with any advantage, to any methods of manipulation used in the treatment of the ova of many other varieties. They are surrounded with a gelatinous or mucus fluid, which unfits them for being deposited either in the salmon troughs or shad boxes. The best method of introducing them to new waters is by putting in live fish about three years old and from 3 to 12 inches in length. In this 728 black bass, 482 Oswego bass and 1,533 of allied species were sent to lakes and the headwaters of rivers in the western part of the State.

Of salmon trout and white-fish eggs the Commission distributed 164,500, and 20,000 young white-fish, and over a million young trout were sent to various parts of the State stocking a large number of localities which had become almost barren. As the salmon trout fry placed in the inland waters of the State in 1872 and 1873 will be large enough to catch during the present season, a few suggestions as to their mode of capture are given. They may be taken at the surface, or half way down, but mainly from the bottom. The bait must be the small live fish upon which they are accustomed to feed.

Of the very great number of eggs of the California salmon imported by the United States Fish Commission, New York received 400,000, which were hatched at the State hatching house. The Commissioners are of the opinion that the true salmon (*Salmo salar*) cannot be propagated in the waters of the Atlantic seaboard, but have

great hopes of success in the experiment with the California species. The young salmon in quantities of ten or twenty thousand were placed in the Mohawk and the rivers draining into Lake Ontario; while 15,000 were sent out of the State.

To eels but little attention was given, but 36,000 have been placed in Buffalo Creek, above the falls of Niagara, for the purpose of observing the result of introducing them into Lake Erie. The shameful waste of them by the pound fishermen in the Great South Bay, which is exterminating them there, is severely denounced. No attempt to acclimate the blue-backed trout (*Salmo oquosso*) has yet proved successful; nor has the increased knowledge of the possibility of artificially cultivating the striped bass so far led to any practical results. It is proposed also to investigate the red herring.

The sturgeon is a food-fish hitherto uncultivated, owing to what seemed insurmountable difficulties; these have now been overcome, and an interesting account of the experiments in manipulating the eggs is given. At New Hamburg, on the Hudson there appeared to be a natural spawning ground for this fish. To this place Mr. Seth Green and Mr. A. Marks were sent on June 3d, 1875, to make experiments and collect information, and on June 7th a ripe male and female were caught. As the fish could not be handled in the ordinary way, Mr. Marks cut open the female. Only five pans of spawn were taken, as the end sought was only a knowledge of the way to hatch rather than to hatch a large number. The eggs were quickly placed in the pans, and the milt bag cut bodily from the male fish, and the milt pressed out over the eggs The eggs were found to come from the fish in an agglutinated sticky mass, somewhat similar to the eggs of the perch or the frog. This was not a proper condition, but by constant stirring after an hour or more they came to be in a state which would justify a trial in the shad boxes. The eggs are larger than those of the white-fish and measure about seven to the inch. They are of a dark brownish color, with the yolk showing black through the opaque brown. Fifty-three hours after impregnation the first movement was observed in the fish, and between 6 A. M. of June 10th and 5 A. M. of the 11th all hatched out. About 40,000 were immediately turned into the river and sought the bottom. It is not probable that they can be kept long by artificial feeding. On June 13th the fishermen at Camp Green caught two ripe females and one male sturgeon, which were probably in search of a spawning ground. Here some 60,000 young were hatched, and turned loose. The time of hatching was about 100 hours, with the temperature of the water at 67° to 64°. The results are yet to be seen. The sturgeon as an article of food has never been appreciated. They are becoming scarcer and more expensive, but the Commission hope to succeed, and thus reduce the price.

Until lately brook trout have not been hatched at public expense, and the thousands of natural trout-streams in the State seemed to be neglected, but the Commissioners say this will no longer be the case. Last year $14,000 was appropriated specially to the rearing of trout. The delay which might otherwise have been occasioned by the want of a suitable location and appurtenances was fortunately avoided by the immediate purchase, at a cost of only $13,500, of the trout establishment already on the premises occupied by the State hatching house. At this place trout breeding had been prosecuted on a scale unequalled throughout the country, and everything necessary to the successful conducting of the operations was in complete running order. Work was immediately begun and proceeded with vigorously, and the State is now in a condition to restock all its public waters with trout. It is therefore proposed to give to all persons wishing to raise this delicious fish as many young as they want. The benefit to the country will be in proportion to the number taken, and as there is no limit to their production there need be none to their use. These will be delivered free of expense at the New York State hatching house at Caledonia, to all persons desiring them to stock public streams or ponds in this State, or they will be sent to any address on the person's paying the traveling expenses of a messenger to accompany them. Besides the trout indigenous to our waters, importations of the California brook trout have been received. This variety is a much hardier fish, can be more easily handled, and every reason exists for the belief that it will thrive.

The Report closes with an allusion to the enemies of a fish culture, and points out why these are one and all reprehensible and prejudicial to the true advantage of individuals and the Commonwealth.

"Already many valuable varieties of fish have been extirpated from our waters, and unless decisive action is taken in the matter the success which might otherwise attend the science of fish culture will be indefinitely deferred. As yet only those species of fish with whose habits we are the most familiar have been artificially treated, and it is unfortunate that these have been most subjected to the greed of fish butchers. It is immediate legislation on this subject that is particularly required, such legislation as is adapted to the needs of the future. The people at large, in viewing a result, are little apt to consider the means by which it has been obtained. This may account for the indifference which they have heretofore evinced on a subject which directly affects every man's household. In order to retain what we already possess, the excessive and criminal destruction now practiced should be immediately restrained."

Among the most deleterious of all these methods is pound fishing. By it many species of fishes have become extirpated. Nowhere is this more incessantly carried on than in the Great South Bay, and its disastrous effects are already felt. Yet all this mischief to the community is done by only a score of fishermen who persist in spite of all opposition. To prevent the total annihilation of many varieties of valuable fish the Commissioners suggest to the Legislature the enactment of a law prohibiting the use of a net with a mesh less than 3½ inches across, for the taking of any kind of swimming fish; also, that all eels of less than one foot two inches in length, in whatever manner caught, should be put back into the bay alive.

Another terribly destructive agent is giant powder, a charge of which is exploded under water, killing or maiming not only all the fishes within the radius of the shock, but also all fish food, insects, worms and all, leaving a desert, bare of animal life. Another method is by poisoning the water by lime or otherwise, for which insufficient penalties are now imposed by the generally inefficient statute. "If such practices shall be continued, then, indeed, are our fisheries utterly doomed, and the most strenuous efforts of fish culturists will be put forth in vain."

SALMON IN LAKE ONTARIO.—A correspondent at Newcastle, Ontario, writing from that place under date of 13th July, and speaking of Mr. Wilmot's fishery operation, says:—

"I had the pleasure this week of viewing a sight such as has not been seen on Lake Ontario for many years. It was something over forty salmon (*Salmo salar*) weighing from four to eighteen pounds each. They were caught in two trap nets on Monday and Tuesday mornings. These nets were set in the lake about half a mile from here, I understand, by order of the Fishery Department, to test the advantages which are likely to be derived from the artificial propagation of salmon in this vicinity. The result must be eminently satisfactory to that enthusiastic fishery officer, Samuel Wilmot, Esq., knowing, as I do, that when that gentleman first introduced salmon breeding into Canada some six or seven years ago, that fish was so nearly extinct in Lake Ontario that the first year of his operations some eight or ten fish were all that could be caught from which to procure ova. J. J. R."

Natural History.

A KEY TO OUR SHORE BIRDS.

We are constantly in receipt of inquiries as to the proper identification of the various species of our "bay-birds." Now that the shooting of these birds is beginning, it seemed a good time to furnish an answer to all by giving a ready method of determining precisely the species of any "bay-bird" met with on our shores without the aid of expensive and cumbersome books. This method is by an analysis similar to that long used in botany, for the formulation of which we are indebted to Jordan's "Manual of Vertebrate Animals." In the use of it no one need find any difficulty. We will take it for granted in the first place that the sportsman knows that the bird he has shot belongs to the *Limicolæ*—shore birds; that is, that it is a water bird, and is neither a duck, nor heron, nor gull, nor loon, but is something between a plover and a curlew. The first thing is to discover to what family his bird belongs. Let us suppose that he finds the description (II, **) of the *Charadriidæ* to fit. If the plumage is speckled, it belongs to one of two genera of this family, *Squatarola* or *Charadrius*. But we will suppose it is not speckled, and that it has three toes; it therefore goes in the third genus, *Ægialitis*. Proceeding, he sees that his bird's bill is not "black, rather long," but "black-tipped, short and stout." It is, therefore, either the ring-necked or the piping; a moment's examination decides, and he knows immediately, no matter what curious local name it may go by on the marshes, that he holds in his hand a plover recognized the world over, in every language, as *Ægialitis melodus*. This week, for want of room, we give only half of the analytic table, waiting until next week to print the rest. We sincerely hope this will be found acceptable by our readers, and utilized by them to gain a more precise and well-founded knowledge, along with their sport, of the interesting birds they hunt.

The measurements below are in inches; L= length; W wing, from shoulder joint to tip; B= bill; Ts= toes. The dictionary contains all the terms used.

ORDER LIMICOLÆ.

THE SHORE BIRDS.

This more or less naked below (sometimes very slightly); legs, and usually neck also, elongated; hind toe free and elevated, often wanting. Head globose, abruptly sloping to the base of the bill, completely feathered (except in *Philomachus*); gape short; bill weak, flexible, more or less soft-skinned, and therefore sensitive, blunt at tip, without hard cutting edges—fitted for probing in the mud; nostrils slit-like, surrounded by soft skin, never feathered; body never strongly compressed or depressed; nature precocial. Birds of medium or small size, more or less aquatic; found in most regions; very abundant in America.

FAMILIES OF LIMICOLÆ.

I. Toes lobate; tarsus notably compressed.....PHALAROPODIDÆ.
II. Toes not lobate; tarsus not specially compressed
*Legs exceedingly long; tarsus as long as tail; bill much longer than head, slender, acute, and curved upwards; feet 4-toed and palmate, or 3-toed and semipalmate .....RECURVIROSTRIDÆ.
**Bill usually shorter than head, pigeon like; the basal soft part separated by a constriction from the hard tip; head subglobose, on a short neck; tarsus reticulate; toes 3 (except in *Squatarola*).....CHARADRIIDÆ.
***Bill usually longer than head, smooth grooved, not constricted, soft-ish to its tip; tarsus scutellate; toes 4 (except in *Calidris*).....SCOLOPACIDÆ.
****Nor as above; bill hard, either compressed and truncate or acute; feet 4-toed and cleft, or 3-toed and semipalmate.....HÆMATOPODIDÆ.

FAMILY CHARADRIIDÆ.

THE PLOVERS.

Head rather large, nearly globose; bill of moderate length, shaped somewhat like a pigeon's bill, with a constriction behind the horny terminal portion; nasal fossæ lined with soft skin, through which the slit-like nostrils open. Wings long and pointed, usually reaching beyond the tip of the short tail, sometimes spurred. Toes usually three, with basal web; tarsus reticulated; tibia naked below. Sexes similar, but seasonal changes of plumage great. Species sixty or more, in most parts of the world.

*Plumage speckled; black below in breeding season.
† Hind toe present, very short.....SQUATAROLA, 1.
†† Hind toe absent.....CHARADRIUS, 2.
**Plumage not speckled; head and neck with dark bands in the breeding season; toes 3.....ÆGIALITIS, 3.

1. SQUATAROLA, Cuvier. WHISTLING PLOVERS.

1. *S. helvetica*, (L.) Cuv. Black-bellied plover. Ox-eye. Grayish, speckled; black below in breeding season, at other times white; L. 11½; W. 7; T. 3; B. 1½; Ts. 2. In most parts of the world

2. CHARADRIUS., L. GOLDEN PLOVERS.

1. *C. fulvus* (Gm.) var. *virginicus*, (Borck.) Cones Golden plover. Frost bird. Duck and grayish above, profusely speckled some of the spots bright yellow; black below in breeding season, at other times grayish; L. 10½; W. 7: T. 3; B. 1; Ts. 1 23. N. Am., a well known game bird.

3. ÆGIALITIS, Boie. RING-NECK PLOVERS.

*Bill black, rather long.
1. *Æ. vociferus*, (L.) Cass. Killdear plover. Brown; rump bright orange brown; tail with black, white, and orange; two black bars across breast, and one above the white forehead; L. 9; W. 6½; T. 3½. N. Am. abundant in the Mississippi Valley.
**Bill black-tipped, short and stout.
2. *Æ. semipalmatus*, (Bon.) Cab. Ring neck plover. Dark ashy brown; black bands broad; feet semipalmate; L. 7. N. Am.
3. *Æ. melodus*, (Ord.) Cab. Piping plover. Very pale ashy brown, clear white below; dark bands narrow and faint; toes slightly webbed; L. 6½. E. N. Am.; abundant along the coast.

FAMILY HÆMATOPODIDÆ.

THE TURNSTONES.

Bill hard, acute, or truncate; nasal fossæ short, broad, and shallow Legs short, stout, brightly colored. Genera two, not much alike; species six or eight; in most parts of the world.
*Toes 3, webbed at base; tarsus reticulate, shorter than the truncate, compressed, almost woodpecker-like bill.....HÆMATOPUS, 1.
**Toes 4, not webbed; tarsus scutellate in front, as long as the sharp, pointed bill.....STREPSILAS, 2.

1. HÆMATOPUS, Linnæus. OYSTER CATCHERS.

1. *H. palliatus*, Temminck. Gystar catcher. Ashy brown and blackish, mostly white below; L. 18; W. 10; T. 4½; B. 3. Coasts.

2. STREPSILAS, Linnæus. TURNSTONES.

1. *S. interpres*, (L.) Illiger. Turnstone. Variegated; black, white brown, and chestnut above; mostly white below; no reddish in winter. L. 8½; W. 6; T. 2½. Cosmopolitan; abundant.

FAMILY RECURVIROSTRIDÆ.

THE AVOCETS.

Legs excessively long. Bill very slender, long, acute, often recurved. Genera three, species eight; in most parts of the world. *Himantopus* is said to have the longest legs relatively of any bird.
*Toes 4, full webbed; bill recurved, flattened, tapering to a needle-like point; plumage beneath thickened as in ducks; swimmers.....RECURVIROSTRA, 1
**Toes 3, semipalmate; bill nearly straight, not flattened.....HIMANTOPUS, 2.

1. RECURVIROSTRA, Linnæus. AVOCETS.

1. *R. americana*. Gm. Avocet Blue stocking. White, marked with black and cinnamon; legs blue; L. 18; W. 8; T. 3½. U. S.

2. HIMANTOPUS, Brisson. STILTS.

1. *H. nigricollis*, Vieillot. Stilt. Long-shanks, Lawyer. Glossy black, white below, legs pink; L. 15; W. 9; T. 3; Ts. 4. U. S.

FAMILY PHALAROPODIDÆ.

THE PHALAROPES.

Snipe-like birds with the toes lobed, as in the coots and grebes, but the lobes narrower. Swimmers; body depressed and the under plumage thick as in the Ducks. Tarsus much compressed. Three species representing as many genera; of northern regions of both hemispheres, southward in winter.
*Bill flattened; membranes scalloped.....PHALAROPUS, 1.
**Bill subulate; membranes scalloped.....LOBIPES, 2.
***Bill subulate; membranes plain.....STEGANOPUS, 3.

1. PHALAROPUS, Brisson. RED PHALAROPES.

1. *P. fulicarius*, (L.) Bon. Red Phalarope. Variegated above, purplish chestnut below; young white below; L. 8; W 5; T. 2½; B. 1. Northern Am.

2. LOBIPES, Cuvier. NORTHERN PHALAROPES.

1. *L. hyperboreus*, (L.) Cuv. Northern Phalarope. Grayish black, variegated; rump and under parts white; sides of neck with chestnut stripe. Northern regions.

3. STEGANOPUS, Vieillot. PHALAROPES.

1. *S. Wilsoni*, (Sab.) Cones. Wilson's Phalarope. Ashy above, variegated; rump and under parts white; sides of neck with a black stripe which changes to chestnut below. Northern regions.

GEOGRAPHICAL VARIATION OF MAMMALS.—Among the recent pamphlets issued by Dr. Hayden is an essay by J. A. Allen of Cambridge, Mass., on "Geological Variation among North American Mammals, especially in respect to size." This subject is a specialty with Mr. Allen, who has worked out its laws extensively as manifested among birds. Summarizing his present results briefly, it appears that most of our mammals belong to groups which have their greatest development in the temperate or colder portions of the northern hemisphere. These rarely present an exception to the general law of decrease in size southward. The more marked exceptions, or those in which there is actually an increase in size southward, occur in those families that reach their highest development in the Tropics, as the cats. In some species there probably exists a double decadence the size, the individual gaining its maximum dimensions at the centre of its abundance and native region, diminishing in size toward the north through scarcity of food and severity of climate, and toward the south owing to the enervating influence of tropical conditions. In a general way Mr. Allen finds: (1) "That the maximum physical development of the individual is attained where the conditions of environment are most favorable to the life of the species; (2) The largest species of a group are found where the groups to which they generally belong reaches its highest development, or where it has what may be termed its centre of distribution; (3) The most 'typical' or most generalized representatives of a group are found also near its centre of distribution, out-lying forms being generally more 'aberrant' or specialized." These laws are elaborated by Mr. Allen and illustrated by accounts and measurements of many of our quadrupeds.

THE MASSACHUSETTS COAST.

SALEM, MASS., July 25th.

EDITOR FOREST AND STREAM:—

The following extracts from my journal for 1876 may be of interest as throwing light on the vernal migration along the Massachusetts coast:—

March 9th—Temperature, 34 degrees at 7 A. M.; wind north east; cloudy and raw. A bunch of about 25 geese passed southward.

March 20th—49 degrees at 7 A. M.; wind southeast and weather clearing. Blue-birds and crow black-birds about; saw large flock of white-fishers (*Buccpha a americana*) in the bay yesterday.

March 30th—Temperature 35 degrees at 7:30 A. M.; wind west and fresh; weather clear and bright. Robins around the house singing merrily.

April 4th—Illustrating our fitful climate, I record that the thermometer indicated 55 degrees above at 7 A. M., and wind east to northeast; at

very heavy storm of wind and rain had prevailed all night; 12 M. the gale increases; 3:45 P. M., snow, sleet and rain cutting the face fearfully; 3 schooners dragged ashore.

April 5th—30 degrees above at 7 A. M. and the worst storm for some years; 8 inches of snow has fallen, drifting to two feet; by 10 A. M. it has cleared up, and sleighs are flying merrily, so you see that after the first blue-birds, robins and black-birds we have had some pretty bad weather. Snowed again during the afternoon.

April 6th—Weather cleared up during the night; wind southwest and moderate; about 6 inches of snow. Saw chipping sparrows and snowbirds (*Junco hyemalis*) yesterday, and a swallow (white-bellied, I think,) off Mascovy's Point, Salem Harbor, this morning.

April 9th—30 degrees at 8 A.M.; wind northwest and stormy; weather cold but clear. Woodcock are numerous in our pastures, where they are almost always plenty in the spring, and this is about the only time they are. Also saw fox sparrows, purple finches, brown thrushes, and a brown hawk. No snipe yet.

April 11th.—Temperature 38 degrees at 7:30 A. M.; wind northwest. White-bellied swallows around my bird-house.

April 12th—Weather about the same. Saw a golden-winged woodpecker. The first snipe (*Gallinago Wilsoni*) was shot yesterday, and the upland plover (*Actiturus Bartramius*) have come. Saw four little blackheads in the harbor to-day and shot a fine pair.

May 2d—Snipe have been shot somewhat since the last date, but with poor success. Saw a white-winged coot off Gray's Rock this morning.

May 5th—Temperature 48 degrees at 7 A. M. Saw our "winter" yellow-legs (*Gambetta flavipes*). Snipe seem to be gone.

May 7th—Temperature 44 at 6:30 A. M. Saw 2 solitary and 1 least sandpipers. Also noticed red-winged black-birds, caw-buntings, one spotted sandpiper and a bittern (*Botaurus minor*); yellow-rump warblers were numerous; purple martins are along, and a good-sized bunch of yellow-legs went along this afternoon; ruby-crowned kinglets are seen.

May 9th—Warm; wind southwest to southeast. Saw blue-creeping and blue yellow-backed warblers, and the first Baltimore oriole.

May 10th—Warm; wind variable. Saw a bunch of "peeps" on the Lynn marshes.

May 11th—Warmer. Saw Maryland yellow-throat, red-poll, and yellow-warblers and two king-birds; got 4 crows' eggs with embryos well advanced; swallows are very numerous, and the yellow-rumps are "thick as hops." Water yellow-legs are numerous to-day.

May 12th—Warmer. A big flock of brants in the outer harbor; also a lone goose.

May 13th—Warm. Saw a black-and-yellow warbler, and black-and-white creeper and a golden-crowned thrush; warblers numerous, among them I noticed the redstart, Nashville and black-throated green; also saw cat-birds and white-throated sparrows.

May 15th—Found a song-sparrow's nest with 4 eggs; warblers still plenty.

May 17th—Cooler. Saw two female chestnut-sided warblers; started a woodcock which probably was breeding; saw a red-eyed vireo.

TEAL.

SELF-PROTECTION IN THE GROUSE.

July 18th.

EDITOR FOREST AND STREAM:—

As is well known a characteristic habit of the ruffed grouse is that of diving into the snow, and thus evading pursuit. The artifice is naturally adopted most frequently in the more northern portions of its habitat. In Minnesota, where the bird is very common, and where the winters are long and the snow deep, the sportsman observes it avails itself of this manner very freely. Sometimes it drops from a tree into the snow like a stone, and at others it plunges therein more or less obliquely; but in any event it penetrates the friendly covering till hidden from view, and presently emerges in the distance, rejoicing and shaking a shower of white flakes from its wings. Few writers or adequate observers fail to notice this peculiarity of the species. But what is not so generally known is, that in the absence of snow it occasionally makes use of other coverts in a way that would seem to indicate that they were substituted in its place. In the southern part of New Jersey, in October, I once flushed a ruffed grouse which was feeding on the buds of a plum tree in a garden. The bird had in every direction an unimpeded chance for flight, but to my astonishment it darted swiftly into a hay-stack close at hand, and secured without difficulty and in full feather. On another occasion, when shooting in the early days of November, we started a ruffed grouse from the leafless summit of a gum tree. This bird could have hidden in a dense cedar swamp, or in the tall reeds of a marsh; or it could have selected a free course of flight in any direction. But instead it quite followed the example noted above. It plunged into a stack of coarse rushes, which happened to be placed some little distance away. This bird was not secured, although we had a pointer to help us. It had most effectively hidden itself. On still another occasion a ruffed grouse flew from under the feet of a woman who was engaged in putting things "to rights" about my yard early one September morning, and darted for concealment into a thicket of morning-glory vines covering a tall trellis before the kitchen door. There was not the smallest logical reason for the bird to stop here; it could have gone on to any other distant cluster if it had so desired. When it was brought to bay (for this was the speedy fate of the poor thing) it was found to be fully grown, and, as far as could be seen, in perfect condition. These occurrences would seem to show the foregoing statement to the effect that the ruffed grouse will, at times, make use of other close coverts in the same fashion that it does snow, was fairly made; and moreover, that the habit is instinctive, if not universally followed.

J.

—The American Association for the Advancement of Science will meet this year in Buffalo, beginning August 23d. A new Sub-section of Anthropology will be formed. On Sept. 4th the International Convention of Archæologists meets in Philadelphia, holding its sessions in the Ohio State Building.

ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN, JULY 22 TO JULY 31.—One belted kingfisher (*Ceryle alcyon*) and one lanier falcon (*Falco mexicanus*), presented by Martin Goldsmith, Camden, N. J.; two great horned owls (*Bubo virginianus*), presented by Samuel N. Hill, Concordville, Pa.; one turkey buzzard (*Cathartes aura*), presented by S. N. Still, Malvern, Pa.; one opossum and young (*Didelphis virginiana*), presented by J. Brainerd, Washington, D. C.; one English black-bird (*Turdus merula*) presented by L. J. Clark, Philadelphia; two Mexican hairless dogs, presented by Master John Yarrow, Washington, D. C.

ARTHUR E. BROWN, Gen. Supt.

APRIL BIRDS IN ILLINOIS.

LEBANON, Ill., July 8th.

EDITOR FOREST AND STREAM:—

I send the following notes for April:—

April 1st—Noticed large flocks of robins congregated in the fields, having just arrived from the south; discovered a nest with eggs of red-tailed hawk. 2d—Black-birds migrating in large flocks; noticed first arrival of the purple martin. 4th—Wilson's snipe is common in suitable places; belted kingfishers first seen; flushed the first Carolina rail in a marsh; the turkey vulture first arrived. 5th—Cliff swallows returned. 10th—Several warblers, the first pair of wood thrushes, and several white-throated sparrows seen. 11th—Bewick's wrens and the chimney swallows have arrived; Wilson's snipe and the plovers have departed northward. 12th—Blue gray gnat-catcher, yellow-rumped warbler, and golden-crested wren first seen to-day; white-throated sparrows abundant. 16th—brown thrush arrived; chimney swallows are common now.

WM. M. JONES.

The Kennel.

THE SETTER BISMARCK.

ALMOST every sportsman having much experience with setters or pointers has his ideal of a dog. I can name forty or more, who saw Bismarck hunt quail during the season of 1870,—'71,—'72,—'73, and '74, who say they never saw his equal in all their experience. From 1871 to 1875, he was hunted, almost daily, during the snipe shooting season upon the meadows adjacent to the Delaware. Every person who has seen him hunt snipe, also admits that they never witnessed his equal. During September, of every year of his life, he was hunted on grouse or prairie chickens, and here also all declare they never saw his equal.

Bismarck was first brought to my notice in 1868 at State Centre, Iowa. I had previously formed a slight acquaintance with Mr. Shipman, his owner, who remarked to me that he had a very promising young dog, would be pleased to have me see him hunt, and invited me to drive out some five or six miles with him for an evening shoot, on the following day. Going to his house, at the appointed hour, with my dog, for the first time I saw Biz chained to a small tree in the yard restless and eager. Biz was a white setter, long, lank, and lean, and I was not very favorably impressed with his appearance. Everything in readiness, I put my dog into the wagon, Biz was unchained, and we rapidly left the village behind and got into a straight road. Looking ahead to where the road forked I saw white Biz standing waiting to see which direction we would take. I remembered to have read or heard before that the waiting of a dog at the forks of a road for the arrival of his master was a proof that a dog had something more than instinct, or that he had reasoning power. We soon got on to the open prairie, and with the speed of the ponies slackened, I had a chance to observe the dog's movements. Such enormous speed as his I never saw before. It seemed as if the dog was trying to show how far he could leap, and Mr. Shipman would drive from elevation to elevation to observe his movements. At times Biz would stop to get directions, which Shipman gave by motion of his hand. Shipman could thus direct his movements as far as he could be seen. Biz had been going over the prairies at this tremendous speed for a half hour without our seeing a bird, and I could scarcely believe that any dog going at this rate could ever get the least scent of game.

But while watching him intently we saw him instantly whirl head to the wind and drop in the grass upon his haunches so that nothing could be seen except his white nose and head protruding. Shipman remarked "Now we have got them." Biz was then at least 400 yards from the wagon. Shipman drove to within 100 yards or so of the dog and we stopped the team. I took my dog out of the wagon and had proceeded but a few yards before he came to a point. Up jumped half a dozen or more chickens. I dropped a pair of them in a style that was satisfactory to myself before Shipman had got half way to Biz, who still held his point. In the course of half an hour or so I had killed eleven and Shipman had had his share of shooting. We had raised probably 300 chickens since getting out of the wagon, Shipman killing nine out of twenty. After giving the dogs water, which we had brought, and a few minutes to breathe, for it was very warm, we got into the wagon and drove over the prairie. This time I had let my dog run, but it was enough for him to keep up with the trail of the wagon while these Canadian ponies were going at their quarter-horse rate. Biz was coursing in his usual style with undiminished speed, and I derived as much pleasure from seeing this white object sailing over the prairie as from shooting. Just as he was passing over a strip of ploughed ground he got scent of birds, and in turning to the windward to point, he lost his balance and tumbled over before he could recover himself, raising a cloud of dust distinctly visible for at least a quarter of a mile. When we had driven up to the spot we found Biz lying, instead of standing, with his feet in the air. This was the first stand I ever saw a dog make stretched on his back. Alighting from the wagon we each of us had half an hour of splendid shooting, for we had found the second pack scattered over probably twenty acres of ground. On one occasion I killed a bird which dropped and fluttered in open sight. Shipman requested that I let his dog retrieve it, and sent Biz for it. After running about half way to it, he said "Charge," and the dog dropped as though dead. Then he told him to "go on," until he got within five feet of the fluttering bird, when he again ordered "Charge," and he dropped. After holding him with the bird almost under his nose he told him to "Pick it up," which Biz did and brought it to us in the most approved style. Shipman then asked me "How much better were eastern dogs broken than Biz?" to which I made no reply. This was my first experience with Biz, which I shall ever remember. I desired to know of Shipman if he would sell him; he asked me how much I would give for him. I made several offers, all to no purpose, and came to the conclusion that no reasonable amount would buy him. The following year, 1869, I made State Centre my headquarters during the season and hunted in company with Shipman on several occasions. Biz was then 3½ years old and I was even more impressed with his extraordinary qualities. I remained there until October to enjoy the duck shooting. It was a novelty to me to see Shipman creeping upon ducks and geese in the sloughs with Biz crawling behind crouched to keep out of sight. Biz was a most excellent retriever; no wounded duck or goose could escape him; he was as much at home in the water as a fish itself. On one occasion we lay by a slough to shoot geese as they came in just before dark to roost, for the night; Three of us fired in the darkness, with what effect we scarcely knew, until Biz had gone in and brought three to our feet. For a dog to retrieve a goose weighing from 10 to 12 pounds, through cat-tails, reeds and mire, without injuring a feather, I consider first class work.

The following year, 1870, upon my arrival at State Centre I found Biz just recovering from a case of poisoning. Some villian had undertaken to kill all Shipman's dogs, and his owner, fearing he would not be able to keep him alive until the next gunning season, accepted my proposition to take the dog home with me to Philadelphia, and bring him back to Iowa the following August. I offered for his use one year twice the amount I ever paid for a dog. Shipman accepted the offer. During the two previous years I had given extravagant accounts of this dog without the most remote idea that I should ever own him or bring him to this part of the country. I had stated that he could find more birds than any two dogs I had ever seen, and all my friends were of course anxious to see his performances. My experience with him had been entirely in hunting grouse, for there were very few quail in Iowa where he had been raised. My first trial of him on quail was in Westmoreland County of this State, in company with two friends. Having heard me speak of him in such glowing terms they were somewhat disappointed, as I was myself. Both of them thought he was not very staunch. When he came upon a covey he often wagged his tail and changed his position, though he would not put up the birds. My friends were greatly taken with his speed and endurance, and each of them expressed a desire to have one of his pups, which they now have, and think them to be the best dogs they have ever owned. Before the close of the season, however, these friends admitted that they had never seen his like on quail. A couple of weeks' practice on them brought him out to perfection.

In the spring of 1871, when Biz was three years old, he was taken to Lewes, Delaware, to hunt snipe for the first time. Although myself and friend killed nearly 100 in two days, not a single point did he make. The birds were wild and he took no little notice of them, leaving the meadows to hunt uplands, that I made him come to heel. During the second day he was used as a retriever. I allowed him to bring me every bird killed, but not to move until I had reloaded and everything was in readiness. From these two day's experience I had little to expect of Biz as a snipe dog. A week or so afterwards I took him to New Jersey with my friend Benjamin Sharp. We drove from meadow to meadow in a wagon. While we were riding along and Biz was coursing over a meadow in sight at a tremendous speed, up jumped a snipe within a few feet of his nose. Biz instantly dropped, while the bird flew some 30 or 40 yards and settled again. Biz remained crouched upon the ground without moving, while we stopped the wagon and my friend killed the bird. This was his first stand on snipe, but during the day he made many more points. He was hunted almost every day on snipe on the meadows bordering the Delaware, that spring, and afterwards in the successive snipe seasons. Every year in October in Connecticut he was hunted on woodcock. He was as staunch on those birds as could possibly be desired, was easily seen, being white, and the spot where the bird lay thus easily determined. After taking my position, with a friend to put up the bird, few would escape. In one piece of chestnut sprouts I bagged 20 over him in less than half an hour.

In Connecticut people snood or snare ruffed grouse. When Biz came across any of these birds caught in this manner he considered them as mine. He would bite off or break the snare and bring the birds to his master to help fill the bag. On ruffed grouse Biz was capital, hunting the woods and thickets cautiously. On one occasion in Westmoreland county, Pa., a friend and myself bagged 31 in two days besides killing as many more quails. He stood those wary birds at a long distance, giving us opportunity to choose our position when they rose.

In the issue of FOREST AND STREAM for February 19th, 1874, there is a sketch of Bismarck from which I extract as follows:—"Biz is from a white setter bitch brought from England by a gentleman of Cedar Rapids, Iowa, in 1864. The bitch was then about six months old. She proved a famous chicken dog, unequaled for speed and nose. She was called a 'white Belton.' She had her first litter of pups from an Irish red setter brought to Iowa by a party of Englishmen who came to Iowa to shoot chickens (grouse) in 1867. The dog was left at Marshalltown. There was nothing remarkable about the dog except he was imported. Biz was of this litter and is like his mother as to color, all white except two red spots. Biz is large, measuring in every point more than the celebrated Kent, except in height, in which he is one inch less; when thin and in hunting condition his weight is 68 pounds; out of hunting season his weight is 75 pounds. * * * His great points are speed, endurance, nose, staunchness, and docility. His speed is tremendous, exceeding that of the fastest pointers fully 50 per cent. By good judges he is thought to go 125 miles per day. His style is magnificent, high-headed, and he winds his game at a long distance and comes to point often at a distance too far from the game to be within proper or ordinary shot."* * * On Christmas day of 1872, he found 20 covies in five hours, hunting from 11 to 4 o'clock at Glassboro, 16 miles from Philadelphia. This was the coldest day of the winter, the mercury being 8° below zero at 8 o'clock in the morning."

Of Biz's pedigree we know little or nothing; from it he took little, but to it he added much. His body was long without the slooping posterior attributed to high-bred setters. The hair on his body was almost as short as that of an ordinary pointer, but he was feathered on the tail and legs to as great a length as that of the highest bred setters, and every other characteristic was that of a setter. He crouched or dropped upon his haunches when he came to

point. He was extremely fond of water and would plunge into it in the coldest days of winter. His breed was much sought after, and there are now more than 200 of his pups. To the owners of them this article will be of interest; the writer has none whatever in his pedigree, and cares as little about it as the historian does of the genealogy of Shakspeare or Napoleon. He is a land-mark in the history of American setters. I never sold one of his pups, or had in any way the least pecuniary interest in his breed. He excited the jealousy of those who sold dogs or their breed, and occasionally I received challenges from them for field trials, and although I never bet a cent in my life those persons always found me at home for any amount they chose to name.

In 1874 there was some talk about an international field trial of setters and pointers. Mr. Shipman gave out an invitation in a letter published in the FOREST AND STREAM dated July 10th, 1874, from which I extract the following: "The setter Bismarck frequently referred to in your journal was raised and trained by the undersigned in this country. We will make a wager of $2,500, that he will beat any setter or pointer that can be produced to hunt pinnated grouse (prairie chickens), the match to take place during the time (5th to 15th of September) in Marshall, Story, or any of the adjoining counties of Iowa. If Mr. Price or Mr. Macdonna will enter his favorite bitch Belle against Bismark in this trial, we will allow him $500 towards expenses of a trip from England here and return, and promise him an opportunity of as fine sport of the kind as the world can produce."

Of Biz's untimely death on November 11th, 1875, an account has already been published in FOREST AND STREAM. The wood cut of Biz was made from a photograph taken in this city. His color was white, save two red spots on his back, which show dark in this picture.

DAVID BROOKS.

IOWA STATE POULTRY ASSOCIATION.—The Iowa State Poultry Association will hold their fourth annual exhibition of poultry, pet stock and dogs, at Cedar Rapids, Iowa, on January 23d, 24th, 25th, and 26th, 1877. The officers of the association are: Z. C. Luse, President, Iowa City; D. H. Richards, Secretary, Cedar Rapids; A. C. Taylor, Superintendent and Manager of Dog Department, Cedar Rapids, Iowa.

SHOTT.—The owner of this dog writes from Greenville, Pa., as follows:—

"In answer to "N. C.," inquiring in your issue of July 20th, that C. Hobaugh's Shott is an Irish setter and not a Gordon, as was represented a few weeks ago; he was sired by Staunch, a red Irish setter, imported in 1872, and owned by G. W. Frazier of Pittsburgh. As to "N. C." having purchased a pup in Erie sired by Shott, it is undoubtedly a mistake, as there are but two dog pups sired by him—one is owned by George Wheeler of Erie, Pa., and the other is still in my possession.

J. C. HOBAUGH."

Dr. Webb, of the Westminster Breeding Kennel, registers the following dogs in our Kennel Book, all out of his celebrated prize bitch Whisky, by Petc, the champion dog at Springfield. Wash Coster has already become the property of Major George McKee, U. S. A , Jim of Mr. Fred Schuchardt, and Snipe of Mr. G. A. Strong:—

Fannie, black-and-white slut; May, do.; Raven, black dog; Snipe, do.; Jim, do.; Wash Coster, black-and-white dog; Eric, do.; Joe, do.; Van, do.

These last three dogs are for sale, and any one wanting a fine bred pointer will find none better in the country.

—Mr. George C. Colburn's lemon-and-white pointer bitch, Belle, imported from the kennel of Mr. Lang, has visited Mr. W. F. Steel's Flake, brother to Dr. Webb's Whisky.

—Mr. A. Branshaw, of Fon du Lac, Wis claims the name of Norah for his gyp, by Plunkett out of Kathleen, the only one of her six in the litter.

—M. D. M. Sharpuack, of Petroleum, West Virginia, claims the name of Dom for his liver and white Cocker spaniel byM. P. McKoon's Captain, out of Caper.

—The Laverack bitch, Petrel, in the Strathroy kennels, whelped eight puppies, five bitched and three dogs, on the 23d inst. They are by Llewellin's Dan.

THE INTERNATIONAL DOG SHOW.

PHILADELPHIA, July 31, 1876.

EDITOR FOREST AND STREAM:—

The interest in this great show is on the increase, as the entries already received testify. The classes for setters will be one of the finest ever seen in this country, as they include nearly all of the most noted breeds from all parts.

The competition for the beautiful prize offered by the Philadelphia Sportsman's Club for the best setter in the show, will be very close, probably over 150 will compete for it.

The pointers will not be so numerous, but in quality will be excellent, including no less than five previous first prize winners which will here meet to test their merits, and the winner will be justly entitled to be called the Champion of America.

The classes for hounds are not as yet well represented, but as there are so many packs around this district, it is expected that they will send a full supply.

Beagles and the curious little dachshunds will be well represented, Dr. Twaddell sending sever of the latter.

The terrier classes are small, but being numerous in New York and vicinity, they will surely fill up.

All dogs will be required to be on the grounds by eight o'clock on September 4th.

The Express Company will deliver all dogs (that have been prepaid) free of expense on the Show Ground; the Superintendent will see that they are properly cared for, and put in their proper classes. They will be reshipped to the exhibitor after the show is over.

Exhibitors must be careful to send properly addressed return labels with the dogs.

In addition to the special prizes already offered, the *Turf, Field, and Farm* will give a handsome prize, particulars of which will be announced next week.

Entries close August 10th, and intending exhibitors should not delay in making their entries. All forms and classification lists can be obtained of

BURNET LANDRETH,
Chief of Bureau of Agriculture.

AMERICAN SETTERS.

EDITOR FOREST AND STREAM:—

Wishing to enter some dogs at the Centennial Bench Show to be held at Philadelphia, September 4th to 8th, I ask your advice as to the class in which they should be entered. I would mention particularly a bitch now seventeen months old, from the kennel owned by my brother and myself, as the type of a strain obtained by careful breeding and selection, and possessing a combination of good qualities that is hardly a subject for any further improvement. This bitch, a setter, is neither Gordon, nor Irish, nor yet an English setter, for both its parents were born in this country. Though the ancestors of the highest civilized portion of the inhabitants of North America were foreign to the land, yet are we no less Americans; and I name my bitch an American setter, believing her to be a credit to the country of her birth, and an honor to her noble ancestry, which credit and honor I hope may be forever perpetuated. In size and color she much resembles Chas. H. Turner's Loo II., being of hot forty-five pounds weight, and mahogany red; but instead of the harsh short hair of the Irish setter her hair is fine and soft, her "flag" seven and a half inches long on centre of tail, tapering to each end, and the "feather" on forelege four inches long. Nose and lips black; eyes brown; form rather slight and very symmetrical, and thos far wherever seen she has received only flattering criticisms, with the single exception of one sportsman saying that her fine lines might perhaps indicate some lack of endurance. On the 26th of June I took her with me on a three days' drive of nearly one hundred miles, allowing her to run, which she did; and notwithstanding the heat and the rocky roads she showed not the least sign of lack of energy nor of footsoreness either during or after the journey. I have named her Cora in the hope that she will take the place in my affections held by her namesake, "old Cora," now nearly fourteen years old. The father of Cora II has a remarkably fine head that so pleased an artist who happened to see the dog while with my brother on a visit that he solicited the privilege of painting a portrait of it. My sole motive for entering dogs at a bench show would be the pleasure of hearing encominms from those best competent to judge the merits of hunting dogs, for I have never sold a dog, nor do I intend or expect to sell one. And no dogs of mine shall appear at the Centennial Bench Show unless I can take them there myself, for I would not risk the lack of good care *en route* to and from a place so distant, and I doubt if C. Jeff Clark, of St. Louis, would trust his fine pointer, or Chas. H. Turner his Irish setter, Elcho, to the hands of "baggage-smashers" again.

And now, Mr. Editor, with this short sketch of Cora, an American setter, can you advise me in what class to enter her at the Centennial Bench Show. Should this meet the eye of "Guido" I would say that I hope Cora will accompany me on my next visit to Memphis and prove herself as superb a field dog as Dr. B.'s Don, whose photograph adorns the library at my house. ROAMER.

[We should say that our correspondent could enter his bitch in Class 10, Division B, or Class 12, Division C, and also for the special prizes offered by John Krider, the Detroit Gun Club, The Philadelphia Sportsmen's Club, and FOREST AND STREAM. We regret that the absurd custom of calling an American bred setter a "native English" has been adopted. It not only misleads many persons, but is an outcome of the snobbish pretentiousness of a few who believe that nothing good in the dog line can emanate from anywhere out of England.—ED.]

KENNEL PRODUCE.—Mr. F. B. Farnsworth, Paris, Canada informs us that his lately imported bloe belton bitch, Rose, on the 19th of June gave birth to six beautiful whelps, one dog and five gyps, marked as follows: Dog, blue belton, resembling dam; one gyp liver, white and tan, marked like Rofus, the sire, (in England); three others orange and white.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

FRESH WATER.	SALT WATER.
Trout, *Salmo fontinalis.*	Sea Bass, *Sciænops ocellatus.*
Salmon, *Salmo salar.*	Sheepshead, *Archosargus probatocephalus.*
Salmon Trout, *Salmo confinis.*	
Land-locked Salmon, *Salmo Gloveri.*	Striped Bass, *Roccus lineatus.*
Grayling, *Thymatus tricolor.*	White Perch, *Morone americana.*
Black Bass, *Micropterus salmoides;* *M. nigricans.*	Weakfish, *Cynoscion regalis.*
	Bluefish, *Pomatomus saltatrix.*
Mascalonge, *Esox nobilior.*	Spanish Mackerel, *Cybium maculatum.*
Pike or Pickerel, *Esox lucius.*	
Yellow Perch, *Perca flavescens.*	Cero, *Cybium regale.*
	Bonito, *Sarda pelamys.*
	Kingfish, *Menticirrus nebulosus.*

For list of seasonable front fice for August see our issue of July 27th.

FISH IN MARKET.—Fish continue to be unusually abundant and prices rule low. We quote: Striped bass 18 to 20 cents per pound; bluefish, 18 to 20 cents; salmon, both fresh and frozen, 50 cents; mackerel, from 10 to 20 cents each, according to size; weak-fish, 12 cents per pound; white perch, 15 cents; Spanish mackerel, 35 cents; green turtle, 12 cents; terrapin, $12 per dozen; halibut, 18 cents per pound; haddock, 8 cents; cod-fish, 10 cents; blackfish, 15 cents; flounders, 10 cents; porgies, 12 cents; seabass, 18 cents; eels, 18 cents; lobsters, 10 cents; sheepshead, 20 cents; brook trout, $1; pompano, 25 cents; soft clams, 30 to 60 cents per huudred; hard shell crabs, $4.50 per 100; soft crabs, $1.50 per dozen.

SALT WATER FISHING.—Our prophecy that this season would be unusually prolific of sport with rod and reel, as well as trolling line seems likely to be fulfilled. The long continued drought and hot weather did drive the fish into deep and colder water, but with the change they return again, and for the last week fishing has been remarkably good. Last week bluefish of large size, such as are generally known as fallfish, appeared off Fire Island, and were taken in immense numbers, the fish weighing as high as nine pounds. But the finest sport was on Saturday last when large weakfish, bluefish, Spanish mackerel and bonitas, were all taking the squid. For some reason chumming, either inside or outside the inlet, has not been good, but it is rather early in the season, and, besides, bunkers have been very scarce. There has been no difficulty in taking a good catch of sea bass and flounders at any time for those knowing the spot. We hear that some fine bass have been taken in Coney Island creek, and that the great abundance of crabs and shrimps is likely to make fishing for this game fish unusually good.

—One fish buyer in Gloucester, paid out $90,000 for fish purchased by him during the month of June.

NEW YORK.—Our correspondent, Pisceo, writes under date of July 3d that the fishing has been very good at Henderson Harbor. His letter, written from Little Falls, says:—

"I came home from Hendersou to spend Sunday. Fishing continues good here. The northeast gale riled up the water, and so stirred up the bottom that the fish were full fed, and were lazy, still we took what would be considered fair lots elsewhere; and made up for bass in pickerel. I had the pleasure of reeling in 250 feet of line with a ten-pounder on the end of it, and for one day wore the belt, but the next my "partner" in the same boat, Mr. Munger, of Herkimer, went out with Mr. Alden Case, the proprietor of the late Van Deyn House, and brought home five fish weighing 52 pounds. Our biggest one yet is a twelve-pounder. It is a quiet, lovely little place, and I go back to morrow for another fortnight."

NEW JERSEY—*Barnegat Inlet, July 30th*—There has been a decided improvement in fisbing of all kinds duriug the week. Bluefish are plenty but small, running from one to two pounds. Sheepshead plenty; not in as fine condition as some two weeks back. Weakfish commenced biting, and large catches made. The following are the quotations for past week:—July 23d. Cale Parker, ten sheepshead. July 24th. Mr. Reeves, and gentleman from Rahway, N. J., seventy-one bluefish. Three other yachts from forty to sixty each. July 25th. Alexander Purvis, Philadelphia, six sheepshead. Capt. Charles Cox and party, forty-six bluefish. Capt. Kelley and party, fifty bluefish. July 26th. Col. S. H. Carpenter, U. S. A., and brother, seven bluefish, forty-five sea bass and blackfish. A. Purvis, Philadelphia, fifteen sheepsbead. L. Mathieus and company, eight sheepshead, fourteen bluefish. July 27th. Jas. Hanford, W. C. Conroy, E. L. Barber, Brooklyn, fifty-three bluefish. Col. Carpenter, twenty-seven sea bass; from forty to seventy-five weakfish per boat are reported. July 28th. R. D. Lorser, P. Quillmau, Chas. Hillman, Philadelphia, twenty-one bluefish. Tbomas Taylor, twelve bluefish. Abm. Force, fifteen bluefish. Reports from the sheepshead ground just come in that they are catching from twelve to fifteen per boat. B.

CONNECTICUT—*Higganum, July 24th.*—Black bass fishing in Lake Pocotsopogue, East Hampton, ten miles east of Middletou, on Air Line Railroad, is excellent. We took 53 black bass in two half day's fishing, besides many perch which were returned to the lake. This lake is a beautiful sheet of water, and being high up on the hills there is always a delightful breeze, and Buell's is a good place to stop at. Glov. Buell is an old hunter and dead shot, and his record of full game bags will show it. He has stocked the lake with about 15,000 land locked salmou, which we hope to try in a few years.

MASSACHUSETTS—*New Bedford, July 27th.*—Our market is well supplied with swordfish, bluefish, tautog, mackerel, bonita, etc. Bat few bass have been caught the last week—about a dozen big fellows by the Cuttyhunk Club, and yesterday Messrs. O. M. Gofford and O. A. Sisson returned from No Man's Land with only two, weighing respectively 27 and 45 pounds. A porpoise, striped with black and white longitudinal stripes, was brought in here yesterday, captured in the bay, of a species seldom seeu north of the equator. CONCHA.

VERMONT—*Montpelier July 28th.*—A party of us have taken sixty pounds of trout, some averaging over a half pound each, at Peacham's Pond, twenty miles from here, the past week. They are considered the finest trout in the State. W. A. B.

CANADA—*River Restigouche, New Brunswick July 22d.*—Reached here last night *via* Matapedia Lake and River, passing two camping parties of the lessee, Mr. Stevens, of Montreal. Fishing is slack now, the river not being in condition, and the first two runs of salmon over. Grilse are running up, and only a few fish are taken, both salmon and grilse. Trout in the lower Restigonche are not abundant, and the river is crowded with rods, the lessees, Messrs. Brydges and Sanford Fleming, being very generous in giving privileges to friends. The latter has imposed a condition of $5 per rod and three cents per pound on all salmon caught, to constitute a subsistence fund for the Indians residing on the river. The railroad buildings and other improvements has impaired the romantic beauty of the river in this exact locality, though above the scenery is much as nature designed it. The following gentlemen are now here.—

Mr. Brydges and party, including ladies, of Montreal; Sir Hugh Allan and son, Montreal; A. R. Makinlay, J. N. Ritchie, John Gorham, Lieut. Clatterbuck, J. Smith, J. Kenney, Lieut. Walpole, H. Crosskill, T. Murphy, H. F. Rowe and friend, all of Halifax; J. I. Fellows and two ladies, St. John; H. J. Leonard and wife, Bangor; C. Hallock and wife, S. R. Gifford, the artist, and Engineer Craven, all of New York. Several others who have been here are not named. There were eleven rods on the river today, and not an average of a fish to a rod. On Monday I go up the river with Mr. Mowatt, the overseer, and shall examine the Government Hatching Establishment. Weather to-day chilly up to 10 o'clock A. M. and cloudy.

HAL.

A NEW WAY TO CATCH EELS.—Mr. Wakeman Holberton writes us that he noticed over in Jerscy, the other day,, a new way of catching eels. The drouth had dried up a small pond near the village of Carlstadt, and the boys had discovered that the eels had buried themselves in the mud, and they were digging them up like potatoes, by the bushel.

FISHING MOVEMENTS.—There have been 122 arrivals the past week, as follows: 27 from the Banks, 51 from Georges, 1 from Newfoundland, and 43 from off shore mackerching. The receipts have been 828,000 pounds Georges codfish, 3,620,000 pounds of Bank codfish, 150,000 pounds of halibut, and 12,400 bbls. of mackerel.—*Cape Ann Advertiser, July 22d.*

THE INFALLIBLE FISH BAIT.

GALVESTON, Texas, July 11th.

EDITOR FOREST AND STREAM.—

As a constant and greatly interested reader of your paper, I could not fail to notice the advertisement of the "infallible fish bait," with which

It is said you are to catch fish, be there any about or not. Now, this notice in a New York paper impressed this correspondent very forcibly with the correctness of the old saw—that you have got to go abroad for home news—inasmuch as we Galveston sportsmen who take a lively interest in the pursuit of the finny tribe which abounds in our waters, were entirely ignorant of this well-timed Centennial discovery, and were thus denied the chance to be the first to rejoice with our fellow townsmen over this brilliant invention, and of attesting to its success. I do not doubt that we should have continued in ignorance were it not for our appreciation of your esteemed columns, which are always first to disseminate the fruits of research and talent. I hope you may concur in my view that this way of proceeding is hiding your light under the bushel; or I+ Joe, with his well-known modesty, blushing at the thoughts of the congratulations with which his admiring friends would necessarily smother him, upon this recent display of his inventive genius? Or does he put it upon the broad basis of the saying, perhaps, that a prophet's merits are never appreciated in his own country?

By the-way, those steam yachts, which one, "T. L.," Galveston, reports he has "running here to our fishing banks, carrying passengers," would be a great success, provided they existed on the blue deep, instead of only on the paper on which "J. L.'s" question in FOREST AND STREAM, dated May 18th, was printed. SILVA.

TROUT IN COLORADO.

GRANITE, Lake Co., Colorado, July 2d, 1876.

EDITOR FOREST AND STREAM:—

In perusing your interesting paper I see accounts of large catches of fish with the fly; and not seeing this place mentioned in your paper I thought I would give you an account of some of our large catches in Twin Lakes. These lakes are on the lake fork of the Arkansas River, 9 400 feet above the sea, 140 miles south from Denver. The lower lake is 2½ miles long by 1½ miles wide, and is 76 feet deep; the upper lake is 1½ miles long by 1 mile wide, and is 93 feet deep. The lakes are connected by a fine stream of water 75 feet wide and ½ of a mile long. On June 18 h, 1876, I began fishing with the fly at 8 o'clock A. M., and caught 7½ pounds of trout (*Salmo virginalis*) before dark. This has been an exceptionally good season for fishing. Some have caught on several days from 200 to 300. In June, 1874, C. W. Derry, my son, in three days caught 1,045 trout—the first day, 335; second day, 345; third day, 365. June is our best month for fishing, although good catches can be made occasionally all through the season until late in the fall.

S. M. DERRY.

Shot Gun and Rifle.

GAME NOW IN SEASON.

Woodcock, *Philohela minor.*
Black-bellied plover or ox-eye, *Squatarola helvetica.*
Ring plover, *Ægialitis semipalmata.*
Stilt, or long-shanks, *Himantopus nigricollis.*
Red-breasted snipe or dowitcher, *Macrorhamphus griseus.*
Red-backed sandpiper, or ox-bird, *Tringa americana.*
Gr at marbled godwit, or marlin, *Limosa fedoa.*
Willet, *Totanus semipalmatus.*
Tatler, *Totanus melanoleucus.*
Yellow-shanks, *Totanus flavipes.*

"Bay-birds" generally, including various species of plover, sand-piper, snipe, curlew, oyster-catcher, surf-birds, phalaropes, avocets, etc., coming under the group *Limicolæ* or Shore Birds.

BAY BIRDS.—On Saturday last, and also since the storm, there has been a good flight of bay birds. Some excellent bags were made in the Great South Bay, and we are expecting to hear of some fine sport on the Jersey coast.

—Messrs. Eaton, Holberton & Co. have issued a supplement to their catalogue containing many articles of great use to sportsmen. Among the many things noticed we mention Canadian shoe packs, new portable boats, and extra strong trolling and other tackle for Florida.

CANADA—*Toronto, July 25th.*—A pigeon shoot was held by the members of the Toronto Gun Club on Monday, July 3d. Four hundred wild pigeons were imported from Hastings, Mich. Through the kindness of the Directors of the Woodbine Driving Park the club had the exclusive right to the track for that day, and only members were admitted, so that the pot hunters were disappointed. The match was shot after the English rules. Five traps, five yards apart; use of both barrels; club rules fifteen birds each. Wm. Loane, acted as trapper and puller, and Mr. C. Callagher acted as referee. The following are the scores made:—

FIRST SQUAD.

Yds.	Name.	Total.
21	J. Maughan	15
21	J. Farrel	12
21	C. C. Small	13
21	E. Perryman	9
21	N. Bugg	10
21	J. Webster	9
18	J. Young	8
21	J. Kennedy	13
21	J. Morrison	6
21	J. Barrett	14

SECOND SQUAD.

Yds.	Name.	Total.
18	R. Morrison	7
21	J. Taylor	13
21	R. Ardagh	8
18	T. Barry	5
18	R. Wilson	8
18	J. Garrett (withdrawn)	2
21	A. McGregor	9
18	W. Loucon	6
18	J. Wright	4
21	Dr. Smith	6

TIES ON FIFTEEN.

Yds.	Name.	Total.	Yds.	Name.	Total.
26	J. Maughan	4	26	C. C. Small	5

Mr. C. C. Small won the prize, which was a very handsome case of stuffed birds.

VIRGINIA—*Norfolk, July 26th.*—We shall no doubt have plenty of quail this fall, as the season has been very favorable for young birds.

BOSTON GUNMAKERS.—"There was recently a question asked in a contemporary as to who were reliable gunmakers and do their work personally in Boston. In the reply all were mentioned with the exception of Wm. R. Schaefer, of No. 61 Elm, a first-class manufacturer, whose guns are only made to order, and are not for sale by the dealers. I had a breech-loading gun made by him last year—a No. 10 bore, 30 inch best Damascus barrels, weight 10 pounds, and I will challenge any brother sportsman to beat me in penetration and in pattern; also the workmanship cannot be excelled. UPLAND."

THE BOUDREN JACK LAMP.—The following are extracts from two parties relative to the jack lamp:—

"My friend and self used your lamps very successfully last fall hunting deer, and consider them by far the best ever used after many years' experience hunting in the States and Canada. Last fall, on the Menowovee River, Mich., he had an Indian paddle up, and struck a two-year old buck with his paddle while I held the lamp in my hand, not wishing to kill him, as we had plenty of meat.

EDWIN C. JOHNSON."

Uncasville, Conn., June 22d.

"In reply as to how the jack works, it is a very fine thing. We have here at the house and on the lakes 31 jacks, and yours is acknowledged by all the guides to be far superior to any of the other jacks. The only improvement that we can suggest is that you make it more flaring at the sides, so that in floating on the small streams you can see both sides of it. Now we cannot. If you have any circulars that you want to send into the wilderness send them along and I will send them around.

H. E. COMSTOCK."

John Brown's Tract, N. Y.

TRAPS FOR FOXES AND MINKS.

FISHKILL-ON-HUDSON, May 16th.

EDITOR FOREST AND STREAM:—

As I have seen some hints to young trappers in FOREST AND STREAM, I have thought that I also might give a few hints that would be interesting. In trapping foxes and minks I have had very good success, and as I make no secret of my mode of capturing them, I will give it here. I select some warm springy place on a side hill, or a boggy place that does not freeze up, and at the point where it is the wettest, I set some small pieces of turf about the size of my hand to serve as "steps," and beginning at one side of the wet place at regular intervals of about twelve inches I fix them so that they will be strong and dry until I reach the springy or wet place where I want to set my trap. I then skip one place, and continue the the line of steps until I get to dry ground on the other side. A narrow place that will require only three or four steps on each side of the trap is sufficient. Then I cut a strong thin piece of turf of the same size and appearance as the others to place over the pan of the trap. For scent I go to some chicken house and get some very fine dry manure (it must be very fine and dry), and put it in a coarse cloth or bag. Then when the ground is dry I drag the bag about a quarter of a mile each way from the springy hole, where I have placed the turf steps. If the bag is coarse and the ground dry I shall leave enough scent for every purpose, as the rains will not wash it away, but improve it. For tolling foxes I have used every scent that I have ever heard of, but none that I like as well as this. Now to set the trap. Some trappers will use every precaution they can think of when they set a trap, as they say the fox can detect the smell of man or iron. All I do is this. I go to a granary, or some place where mice abound, and get some of the mice chaff usually found around such places, which generally smells very strong of mice. I then set my trap in the water, and placing the last piece of turf over the pan the line of steps is complete. Then when I have stood I sprinkle a little chaff and pass on, not retracing my steps: and as sure as a fox strikes the trail he will follow it up, and when he comes to the spring (as fox is very careful about stepping in the water) will try the steps, and as the first and second are all right, and hold him, and as they are placed about the right distance apart for his gait he is pretty sure to step his whole weight on the one concealing the trap. I have taken five in one trap set in that manner in one season.

Another good plan is this: Take a common field mouse's skin and stuff it. Set your trap near a stack of grain, or at any place where a fox is likely to pass. Cover the trap lightly and sprinkle some of the mouse chaff around it. Place the stuffed mouse on the pan of the trap so that it can be plainly seen. As the fox is attracted by the scent he will see the mouse and will not hesitate an instant, but will pounce both forefeet on the mouse without the least suspicion of a trap. It requires a stronger trap to hold him this way. I think, but it is more sure.

Now for the mink. The manner of setting steel traps has been pretty well explained in FOREST AND STREAM by an old trapper. In regard to scent, I think that prepared from trout superior to any other. In summer, when I have a mess of trout to dress, I take some heads, etc., and put them into a strong glass bottle, and set the bottle in the sun and they will turn to an oil that gives a very strong scent—one that will attract the mink better than any other I have ever used, and by using a small club or sucker, and a few drops of the scent, you have a killing bait. As steel traps are rather heavy to carry, and it takes sometimo to set them properly, I dispense with them as much as possible, especially if the country I am trapping in is heavily timbered. In the place of of them I take a 2 or 2½ inch auger with a short shaft, and having at the end of the [illegible] with a claw, and also a supply of small wrought nails with large heads and the points well sharpened by a file. Now in ten minutes I can make, set and bait a trap for minks that has no equal. I find some log near a stream, or the root of a tree, bore a hole about four inches deep in the side, and throw a little mud or sand in the bottom. If the h [illegible] bored in the top of the log, I have to place a piece of bark in a position to keep the rain from filling the hole with water. Then I take three sharp nails and drive them in so they will project inward and downward about half an inch, just deep enough to make them secure. Then I take a piece of fish, drop a little of the scent on it, and place it at the bottom of the hole. The trap is thus complete and ready baited. The mink can shove his head past the points of the nails to get at the bait, but cannot get back. In going my rounds all I need to do is to draw the nails, remove the mink, replace the nails, and my trap is reset. G. W.

THE KAY CONCENTRATOR.

NEW YORK, July 24th.

EDITOR FOREST AND STREAM:—

As I see a number of letters *pro* and *con* regarding the Kay concentrator, I would like you to publish my little "testimony" on the subject. Being a practical sportsman I do not like to sch anything that I have not tried, and for that reason I devoted considerable time on the 4th of July to experiments with different powders, concentrators, etc., and as far as my experience goes I found the Kay improved the pattern of my gun very much—say on an average of at least 25 per cent. At 45 yards the target (30 inch) showed 179 pellets against 127 to 140 of loose shot. I presume a good deal depends on the gun and how loaded. I consider them much better than Eley's, but they should never be used in a choke-bored gun. W. HOLBERTON.

—A portion of the Australian rifle team comprising Capt. J. McGarvie Smith and Lieut. J. H. Maddock, of the 1st Regiment of Rifles, and D. Gess Lynde and J. Y. Slade reached San Francisco on the 28th ult. The rest of the team are at Wimbledon, having gone to England via the Isthmus of Suez.

CREEDMOOR.—There was only one match at Creedmoor on Saturday, the competition for the "Marksman's" badge, presented by H. C. Poppenhausen, Esq., of the Long Island Railroad. The conditions were, five shots each at 200 and 500 yards, only the State medal rifle to be used. Mr. J. L. Price, of the Seventh Regiment, was the winner, with a score of 45 out of a possible 50. The following are the scores:—

Name.	200 yds.	500 yds.	T'l
J. L. Price	21	20	41
W. H. Osborne	20	21	41
T. R. Murphy	21	19	40
A. D. Van Hensen	21	19	40
E. W. Bofele	16	24	39
W. Robertson	18	20	38
J. W. Gardner	18	20	38
C. F. Robbins	19	18	37
G. F. Merchant	17	18	35
W. H. Murphy	16	18	34
Geo. Waterman	16	18	34
W. G. Dominick	17	17	34
J. B. Holland	18	21	39
F. H. Holton	15	19	34
S. T. Hubbard	16	18	34
F. Backofen	15	16	31
W. Bevan	20	11	31
C. Heizman	16	15	31
W. C. Clark	15	12	27
Douglass	16	13	29
G. R. Graham	16	12	28
J. A. Gee	18	9	27
M. A. Scull	18	8	26

MASSACHUSETTS.—The Springfield Amateur Rifle Association, whose organization we announced two weeks ago, has commenced work promptly, and appended is the result of their third practice shooting. Since the association was organized considerable interest has been manifested in the subject of rifle shooting in that city, and they have largely increased the number of their members. Score—Distance, 400 yards; position, lying or kneeling; regulation targets; highest possible score, 50 points in ten shots:—

L. H. Mayott	0 4 5 5 5 3 5 5 5 5	47
W. S. Gomff	5 3 4 5 0 2 4 4 4 2	33
J. B. Squires	2 0 3 2 5 5 4 3 2 0	24
W. C. Chapin	0 0 4 5 3 2 0 3 3 0	20

Messrs. Mayott, Bumstead and French used Sharp's medium-range rifles; Messrs. Emerson, Squires, Smith and Chapin Stevens's; Mr. Gompf a Springfield rifle with peep and globe sights, and regulation ammunition. There is also a rifle club composed of employees of the Government in Springfield, who shoot the regular Springfield rifles, open sights, with common army ammunition. Some good shooting is done by this organization, which usually shoots 300 yards, at an eight-inch bullseye, scoring as high as 37 and 40 points out of a possible 50. Mr. Hare, the Captain of the team, and a marksman of considerable reputation, on Tuesday evening, with the common rifled musket, open sights, scored 87 points at 500 yards out of a possible 50, making five bullseyes.

WISCONSIN.—The third competition at 1,000 yards for the Remington navy revolver came off at Milwaukee, last Friday the 21st inst. Chas. Turner wins the second time, with 41 out of a possible 50. Following is the score:—

Name.	Total.	Name.	Total
C. Turner	41	J. C. Wells	31
J. M. Arnold	38	S. D. Badgs	29
E. Fielding	36	H. Yale	29

We have had very little practice as yet at 1,000 yards, but intend to make up for lost time by steady work. I hope to show better scores in future. WAU WAU.

MICHIGAN.—Match practice between team number one and team number two of the Greenville Rifle Club took place Wednesday, July 19th; match won by the latter. Distance; 400 yards; possible score 25 points:—

TEAM NUMBER ONE.

Name.	Score.	Total
E. H. Jones	4 4 2 4 4	18
W. Woodman	3 4 4 5 5	20
C. H. Hale	4 4 4 5 5	22
F. N. Wright	5 4 5 4 3	21
L. Spaulding	3 3 3 4 4	15
W. G. Nelson	3 5 4 4 5	21
Total		119

TEAM NUMBER TWO.

Name.	Score.	Total.
A. G. Yowo	4 5 4 4 5	22
M. Johnson	4 5 4 4 3	20
D. T. Sapp	4 4 5 5 4	22
H. Rossman	3 5 4 5 4	21
L. Wright	3 2 4 3 5	16
N. J. Just	4 5 5 5 5	24
Total		125

IMPORTANT.—Caro should be taken, in buying Fishing or Hunting Suits, to get a genuine Holahird Suit, and not one of the worthless imitations which are being put on the market. The best is the cheapest.—Adv.

Rational Pastimes.

SCOTCH GAMES AT JONES' WOOD.

On Friday last the annual games of the Seventy-Ninth Regiment came off at Jones' Wood. This regiment was organized on the disbanding of the Seventy-Ninth last year from the National Guard, and the admirers of the "kilted lads" will be glad that their strength is sufficient to enable them to continue their annual athletic gatherings. The great bulk of the credit is due to Col. Joseph Laing, who has labored assiduously to bring up the regiment as an independent body to its former status. He deserves success, and is certain of attaining it. The command mustered at its headquarters on Twenty-third street on Friday morning, and marched to the wood, led by Robertson's regimental band. Col. Laing was in command. On reaching the ground the athletic sports were almost immediately begun, and while they were in progress the musicians kept the dancers busy in the pavilion. Within the ring many well known athletes had put in an appearance, including Anderson of Newark, McKay of New Haven, and A. C. Reid of Hamilton, Ontario. Their feats were well up to the average, and in one instance at least, that of running high leap, the competitors far outstripped the usual achievements of Caledonian athletes. The Highland dances are always to be classed among the most interesting of the competitions. The Sword Dance, or Ghilis Callum, is one of the best combinations of agility and grace to be witnessed at Scotch Games. The Highland Fling is no less attractive, and when danced in the full costume to the music of the bagpipe is as amusing and entertaining to a stranger as it is inspiriting to a Scotchman. Captain Bruce made an admirable judge, and under the watchful care of Captain D. T. Keller the arrangements were faithfully carried out. The following is the prize list:—

Putting the Light Stone—1. John Anderson, Newark, 44 ft. 9 in.; 2. Alex. McKay, New Haven, 43 ft. 7 in.; 3. W. Robertson, N. Y., 42 ft. 4 in.

One Hundred Yard Race—1. A. C. Reid, Hamilton; 2. J. McLaren, Newark; 3. A. Rennie, N. Y.

Running Long Jump—1. A. C. Reid, 19 ft. 7 in.; 2. E. W. Johnston, Toronto, 19 ft. 5 in.

Throwing the Light Hammer—1. A. McKay, 99 ft.; 2. John Anderson, 92 ft.

Relief Race (440 yards; competitors enter in pairs; partners carry each other one half the distance)—1. D. T. Keiller and E. W. Johnston; 2. J. Munro and T. B. Irvine.

Standing Jump—1. E. W. Johnston, 10 ft. 4 in.; 2. A. McKay, 9 ft. 7½ in.

Hitch and Kick—1. John West. 8 ft. 7 in.; 2. A. C. Reid, 8 ft. 6 in.

Boys' Race—1. John Redmond; 2. Leo. Schwab; 3. G. D. Forrest.

One Mile Walking Race, open to the National Guard—1 M. M. Forrest; 2. W. J. Hunne.

Hurdle Race—1. A. C. Reid; 2. W. Robertson; 3. J. McLaren.

Fat Man's Race, open to all weighing over 200 pounds—1. Alex. McKay; 2. Robt. Pirrie.

Hop, Step and Jump—1. E. W. Johnston, 41 ft. 9 in.; 2. G. T. Addison, 38 ft. 7 in.

Running High Leap—1. A. C. Reid, 5 ft. 7 in.; 2. John West, 5 ft. 6 in.

Tossing the Caber—1. A. McKay, 39 ft. 5 in.; 2. E. W. Johnston, 30 ft. 7 in.

Three-Legged Race—1. W. Robertson and J. McLaren; 2. J. Munro and A. Rennie.

One-Mile Race—1. T. B. Irvine; 2. W. J. Hunne.

Broadsword Dance—1. John West; 2. James Kennedy.

Highland Fling—1. James Kennedy; 2. W. Robertson.

Vaulting with the Pole—1. W. Robertson and F. Duke tie at 9 ft. 8 in.; 3. J. McLaren.

Sack Race—1. Robertson.

The prizes were distributed by Col. Laing after the programme was finished. The Highlanders' games were the first held in the Wood since its alteration, and it would appear to be at least as well suited as formerly for such a purpose. The Caledonian Club, which has for a few years resorted to Lion Park, will return to Jones' Wood at its annual games in September.

AMATEUR ATHLETICS.—The grounds of the New York Athletic Club were on Saturday last the scene of one of the most successful athletic meetings ever held in this country. The entries were numerous, and the attendance of spectators large. The first event, the 100 yards race, had no less than 41 contestants, and was run in a series of heats. The winners in the first series and their handicap and times were as as follows:—

W. A. Bartlett, 33ft., 10⅘s.; J. H. Ferguson, 16ft., 11s.; J. G. Lathrop, 16ft., 10⅘s.; W. J. Kendrick, 30ft., 10⅘; R. L. La Montague, 21ft., 10⅘s.; Thos. Duffy, 25ft., 10⅘s.; Robert Prior, Jr., 33ft., 11s.; G. C. Power, 33ft., 10⅘s.; James Smith, 15ft., 10s.; Fred. Rogers, on line, 11⅘s.; E. H. Herrick, 12ft., 10⅘s.

In the second series, Bartlett, Ferguson, Lathrop and Kendrick started in the first heat. Kendrick came in first, in 10⅘ seconds. In the second heat, La Montagne was an easy winner in 10⅘ seconds. The third heat was won by Smith, in the same time, with Herrick so nearly even at the finnish that the latter was allowed by the judges to compete in the final heat. This was won by La Montague again, in 10⅘ seconds, with Smith a close second, and Herrick third. There were thirteen entries for the one mile race, B. C. Woods, of the New York Athletic Club, starting at score and the others at varying distances up to 155 yards. The race was won by David Woods of Galt, Ontario, who was handicapped at 155 yards, but he was protested against as being a professional. The 440 yards run had twenty-eight entries, Jas. G. Lathrop, of Boston, winning in 52 seconds. Seven started for the two mile walk. Fred Wersel, of Newark, bcing the winner, scoring 24 minutes from D. M. Stern. The prizes were handsome gold and silver medals.

CRICKET.

NOTES.—The Manhattans play at Paterson, August 2d, one day's play only, and the Marions near Philadelphia on Friday and Saturday.

—Lovers of cricket will be pleased to learn that an unusually intercsting match will be played on the grounds of the St. Georges Club, Hoboken, to day. The contestants will be an eleven of Canadian cricketers from Montreal, Toronto and Ottawa, under the captainey of Rev. T D. Philips, and an elcven of the St. Georges Club. Wickets will be pitched at 10 o'clock sharp. After this match the Canadians go to Philadelphia and play there.

BASE BALL—THE PROFESSIONAL ARENA.

The League pennant record to July 31st, inclusive, show the clubs occupying the following relative positions in the race:—

Clubs.	Games Won.	Games Lost.	Games Drawn.	Games Played.
Chicago	35	7	0	42
St. Louis	27	14	0	41
Hartford	25	10	1	36
Boston	22	19	0	41
Louisville	18	24	3	45
Mutual	15	24	1	40
Athletic	11	28	1	38
Cincinnati	6	35	0	41
Total	159	159	6	324

It will be seen that 159 games have been won and lost, and the Louisville Club have played single tie games with the Hartford, Athletic and Mutual nines, making a total of 162 games played in all. From the start each club had to play seventy games with every other club. This makes an actual total of 280 games to be played during the season. Of this number 159 have been played, leaving 121 yet to be played to finish the quota.

The record of model games (scores limited to five runs) since our last issue are as follows:—

July 24.—Auburn vs. Carbondale, at Auburn, N. Y..... 4 to 3
July 25.—Meta vs. Resolute, at Boston,... . ... 4 to 3
July 25.—Eagle vs. Hoffman, at Bath, L. I..... 5 to 2
July 26.—Live Oak vs. Rhode Island, at Providence, R. I. 1 to 0
July 26.—Mutual vs. Fall River, at Fall River, Mass..... 3 to 2
July 26.—Ithaca vs. San Francisco, at Ithaca..... 4 to 3
July 26.—Rochester vs. Olympic, at Rochester, N. Y..... 5 to 3
July 27.—Androscogcin vs. Eggleston, at Lewiston, Me., 4 to 2
July 27.—Alaska vs. Orange, at Orange, N. J..... 5 to 1
July 28.—St. Louis Reds vs. Blues at Memphis, Tenn.... 1 to 0
July 28 – Rhode Island vs. Boston, at Providence, R. I.. 4 to 3
July 31.—Carbondale vs. Orange, at Orange, N. J. (10 ins.). 5 to 5

—The following is a synopsis of the base ball tournament lately held at Syracuse:—

Clubs.	Stars.	Tecumsehs.	Ithacas.	Ilions.	Crickets.	Games won.
Star	..	1	1	1	*1	4
Tecumsehs	0	..	1	2	1	4
Ithacas	0	1	..	1	1	3
Ilions	0	0	1	..	1	2
Crickets	0	0	0	0	..	0
Games Lost	0	2	3	4	1	13

—The Clown's Eleven of England are coming to this country in August. Lots of fun many be expected at the hands of the English Clowns, who dress in stuge costume and cut up all kinds of antics during the game.

—The finish of the game between the Germantown and Young America has been postponed until September, on account of the great heat, the game standing—for Young America on first innings, 302, and for Germantown, 80 for 7 wickets.

TOBACCO AT THE CENTENNIAL.—William S. Kimball & Co., of Rochester, N. Y., occupy Section E, No. 25, and their display of tobaccos reflects credit alike upon their liberality, enterprise and infinite good taste. Their fixtures are of the most elaborate and expensive character. The base of their inclosure is of solid walnut, which is surmounted by a beautiful marble top, and above this are arranged in artistic style the various grades of their goods. They are the proprietors of the celebrated "Peerless" Tobacco Works, and their "Vanity Fair" and cigarettes are too popular to require any eulogistic remarks from us. Their display is a rich one—eminently worthy of the first prize.—*adv.*

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

J. M. H., Philadelphia.—Please inform me where to write for a guide book to the White Mountains? Ans. Jas. R. Osgood & Co., Boston; do not know price.

J. N. B., Alexandria Bay.—You can buy very complete Maps of Quebec and Ontario from Government surveys, by applying to George Thackenbarg, map publishers, Montreal.

W. E. C., Buffalo, N. Y.—Please state the best method of straightening tips. Ans. First steam the tip and then hang it by one end with a heavy weight suspended at the other.

N. L., New London.—Would you kindly inform me where the best striped bass fishing can be had in the neighborhood of New London, excepting Rope ferry on Niantic River? Ans. We do not know of any better place.

F. G., Milwaukee.—A few boys of Milwaukee are going to get up a rowing club, and wish to know where to obtain a shell and the cheapest. Ans. Thomas Fearon, Yonkers, N. Y., can furnish you with a boat. Write to him for prices.

R. D. H., Jackson, Mich.—Will you please inform me whether I can get good bay bird shooting at Shinnecock Bay, and what time in August is it best? Ans. At Good Ground; no date can be fixed, as the birds are uncertain in their flights. Write to W. N. Lane.

J. F. C., Lenox, N. Y.—Is there any choice between the guns made by More, Grove, Forsyth, and Westonf and if so, which is the best maker? How do their guns compare with the Remington and Whitney guns? Ans. We cannot discriminate between the different gun manufacturers.

F. C., N. Y., Will you please inform me what is the best and most convenient place to fish in, for one who is going to take the trip to Niagara, Montreal, and down the St. Lawrence, returning via Lake George? Ans. Alexandria Bay, on your route from Niagara to Montreal; or Clayton, a few miles above.

STUMPS, Northville, N. Y.—Will you kindly inform an English reader if the game of golf has been introduced into this country? A description of it would interest your readers. Ans. In the London *Field* of June 17th, you will find the scores of the first game of golf ever played on this side of the Atlantic, as we are informed. It was played at Quebec June 1st, this year.

"RAOUL," Pe'keepsie, N. Y.—I want to get a dog not specially for hunting, but a companionable animal kind to children and handsome. I am told that a cocker spaniel is the animal I want. Is it so? And if so where can a pup of that breed be found and at what price? Ans. We would recommend a cocker spaniel and can procure one for you at $30.

R. S., New York.—A, B, C, and D are playing pedro for a pool, the first man out taking the pool. A has seven points to go; B bids 6, C bids 7, which would put A out; B then objected, saying that it is contrary to the rules of the game to bid a man out when playing for a pool. Is it correct? Ans. B is right; the rules of the game do not permit a man to be so bid out. An agreement to the contrary could have been made before commencing the game.

INDEX, Macon, Ga.—I have one of Scott & Son's fine "Premier" guns and case. While gunning my boatman dropped the case in salt water, which soaked some of the cloth lining off, and shrank the rest so that it does not entirely cover the wood. Where can I get the case relined, and what will it cost? Ans. By sending your gun case to Henry C. Squires, No. 1 Courtland st., or to Thomson & Son, No. 338 Broadway, you can have it properly relined; the cost will depend upon the kind of lining used.

MONERLY, Moberly, Mo.—1. Will you confer a favor on a reader by describing a woodcock? 2. Will you tell me what is the best season for shooting partridges? 3. Do you consider a $20 muzzle-loading shot gun a safe gun? Ans. 1. In the next issue of our paper you will find a full description of the woodcock. 2. November. 3. Many persons shoot such low priced guns without accidents, but they are liable to get out of order at any time and are not as safe as higher priced and better finished guns.

W. H. M., Sterling, Pa.—1. I have just purchased a $75 Remington breech-loading shot gun. Please tell me if they are equal to the best English guns so far as penetration, close shooting &c., are concerned; guns being of equal weight and bore? 2. Will you please tell me where to send to get the best work on dog training? Ans. 1. The Remington $75 gun will compare well with guns of any other makers either foreign or domestic at the same price. 1, 2. The best book on training &c., is Dinks Hutchinson and Maynew, price $3. We can forward you a copy.

"EXTRACTOR," Newton.—1. I have a setter whose nose has for a number of months been in a very hard and dry state, and never moist only about the nostrils. I have done nothing for it, thinking possibly it would come about O. K. of itself. The dog is in good health and has a good appetite; now is there any thing that need or can be done for such a case? 2. How old should a dog be before serving a pup? Ans. 1. Make pills of common pine tar about the size of a marble, and give your dog two per day for three or four days. 2. Not less than from 15 to 18 months old.

J. M. L., New York.—I understand that the Colvin canvas boat is not being manufactured any more. I have been wanting such a boat, but have felt that they were neither durable nor safe. Can you give me any information in the matter, or do the know why they proved unsatisfactory to sportsmen? Ans. The manufacture was stopped on account of the lack of demand, caused probably by the fact that it was necessary to cut out of frame in the woods; we have no doubt that when properly made they were perfectly durable and safe. There are now, however, canvas boats without end from which to choose.

W. A., Newark.—What are the hotel or boarding accommodations of Montauk Point, L. I.? Is there apt to be any swipe or other shooting there during the month of August? Is it a fashionable resort. Can you give me the address of any hotel or boarding-house keeper at that place? What will it cost to get there? Ans. A good hotel and boarding-house, and, we understand, excellent bay bird shooting. It is not "fashionable," although a favorite summer resort. Take Long Island Railroad to Sag Harbor, and thence stage. Do not know address of hotel. Cost to get there about $3.50.

GUNNER, Sunbury, Tenn.—On what theory is it explained that a breech-loading shot gun requires 3¼ drachms of powder to produce the effect in recoil, penetration and general results that are to gained by the use of 2¼ drachms in the same calibre of muzzle loader? That the fact is so has been my experience and also of others with whom I have spoken to on the subject? Ans. The breech loads made at the present day do not require larger charges than muzzle loads to produce the same penetration, but it is the fashion now to shoot more powder. When the first breech-loaders were made there was a large escape of gas between the barrels and false breech which had to be compensated for by additional powder.

WEBFOOT, Ironton, Ohio.—There is a party of gentlemen wanting to go fishing and hunting on the Kanawa River, West Virginia, and camp out. Will you be kind enough to inform them of the best place, and what kind of a place to select to pitch their tent, and what is the game law; and when is the best time to go for general sport this or next month? Ans. Go to Parkersburgh, West Virginia; take steamer and go up the Little Kanawha 25 or about fifteen miles; then up the Hughs River some ten or twenty miles, or further if desirable. Game plenty; deer, squirrels, and good bass and trout fishing. Write to Tom Foster, Tewark, Wirt Co., West Virginia. August is the best time for front. Deer can be killed after July 15th. No other close seasons.

A. W. G., N. Y.—I have been informed that it is possible to obtain good trout fishing on Long Island, if application is made to the "proper authorities." Can you inform me who constitute the proper authorities and what a week's fishing on any of the club reservations would probably cost me? Ans. If you have a friend who is a member of the South Side or Suffolk Clubs you can obtain, under certain restrictions, the desired permission; otherwise you cannot. There are certain trout preserves or farms where, at the price of one dollar a pound, you can catch domesticated and liver-fed trout, but we cannot recommend it as sport. If you address a letter to Mr. John Stellenwerf, Islip, L. I., you can ascertain whether there is some wild brook fishing to be had and how.

P. A. D. Can good gunning and fishing be had in the vicinity of Berkley Springs West Virginia? What kind of game. Are any brook trout to be caught? Is the country all very rough? Do you know of a good guide in that vicinity? Do you know of any place in Pennsylvania, where as good or better hunting and fishing may be obtained; if so, where? Ans. The gunning at and around Berkley Springs is excellent especially during September or October. There are plenty of trout. The country as a general thing is rough and mountainous, with here and there some fine farms and country seats. Squirrels, quail, grouse, hares and deer are in abundance. Wild turkeys, coons, with an occasional bear can be killed. Any good guide can be obtained at the Springs. Write to Alb. Kirkwood. Know of no better place in Pennsylvania.

PADDY O'LEARY, Ashbysburg, Ky.—1st. By 30 inch circle do you mean 30 inches in diameter in trying shot guns? 2. Is 120 pellets of mixed shot, No. 3 and 5, 40 yards, good for an old time muzzle-loader? 3. Does the jumping of a pistol or gun, caused by heavy loading effect the accuracy of its shooting? 4. Does the rifling of a gun decrease its range; some say a smooth bore will shoot farther than a rifle, but with less velocity. Will it do it? Ans. 1. Yes. 2. Yes, but *don't* shoot mixed shot. 3. Yes, it throws up the muzzle. 4. No, it increases it and ensures greater accuracy. In smooth bores, windage (and consequent loss of force) and the movement of rotation of the ball are the causes of want of range and accuracy, and grooving was introduced to suppress the windage and force the movement of rotation to take place about an axis coinciding with the direction of the motion of translation.

C. H. S., Philadelphia.—1. If I am invited, or have permission to shoot on private property in Salem county, N. J., will it be necessary to first become a member of the New Jersey Game Protective Society? 2. Do you know any place in the New England or Middle States where in the early part of September I would be sure and certain of finding good woodcock shooting? I am afflicted with hay fever at this time, and always go away. Distance is not so much an object as quiet and freedom from all fashionable resorts, together with pure mountain air and good shooting. Ans. If you are not a resident of the State of New Jersey you cannot shoot in Salem county without paying $5 to the West Jersey Game Protective Society; such is the law of the State 2. We cannot name any place where you can be certain of finding woodcock shooting in September.

M., New Haven.—1. What is the extreme southern limit of the sea trout (*S. canadensis*)? 2. I wish to experiment a little with land locked salmon in this vicinity. Where, and for what price can I get 2,000 fry? Ans. 1. Prof. Brown Goode informs us that *Salmo canadensis* or *S. immaculatus*, Storer, is sometimes taken in Eastport Harbor, Me., and (perhaps) off the mouth of the Kennebec. If, as is contended by some good authorities, *S. immaculatus* is simply *S. fontinalis* run out to sea, specimens have been taken by the United States Fish Commission as far south as Vineyard Sound, Mass. Facts regarding its distribution, food, spawning, habits, etc., are much desired. 2. From the State Hatching House at Sebec, Me. Address for information Hon. E. M. Stillwell, Bangor, Me.; or possibly by writing to J. B. Thompson, New Hope Bucks county, Pa.

F. W. C., Boston.—You will greatly oblige me, and doubtless many of your readers, if you can from your own information or from correspondents, give me some hints as to the manner of keeping and transporting minnows, shiners, etc., alive for black bass fishing this warm weather. I find it very difficult to carry them in good order twenty miles by rail even, and often want to carry much farther than that. Ans. We have seen at Conroy's a pail made for the purpose with a perforated cover, which no doubt would assist, with an occasional change of water and piece of ice, in preserving fish for a considerable time; but it recurs to us that there is an idea in Mrs. Shurtliff's article, "The Aquarium," in our issue of the 6th ult., which might be utilized. Fish die in water from want of oxygen. Why not supply this by means of vallisneria, or any of the marine plants used in aquariums? A perusal of the article will explain our meaning; otherwise there is nothing to be done but to aerate the water by constant dipping, or an air pump.

New Haven. C., H.—I have been reading what P. Clayton says in your paper of June 29th in regard to hunting at Berkley Springs, West Virginia. I wish to inquire of you if that would be a place suitable for a man sixty five years old to spend a few days, and could he have a comfortable place to stop and not be obliged to go far for game? or would it be rather too wild a place? What I want is a quiet place where I can go with my wife and hunt squirrels, or something of that kind, with a comfortable place to stop, in September. Can you tell me of such a place? Ans. Berkley Springs is the very place you desire—fine fishing, say quantity of rabbits and squirrels, and plenty of grouse. The hotel is first class; if too expensive you can easily get board in any surrounding farm house for $10 to $20 per month, which would be preferable, as the best time and place of hunting could be pointed out. Route to the Springs is by Baltimore and Ohio Railroad, stopping at Sir John's Run, thence by stage four or five miles to the Springs. September is a good month.

D. F. P., Philadelphia.—1. I have a 15 bore Beau gun, what proportions of powder and shot do you think it would shoot best? Have been told so many different ways that I can lost to know which to follow. 2. In loading brass or paper shells should the powder be rammed hard, or merely put solidly in its place? 4. Do you think the brass shells shoot any better than the paper? 4 I am using brass shells stamped "F. D. & Co.," they fit the gun smooth and easy, but after shooting I find it quite difficult to remove them from the barrel, also the cap at end which screws off to take explosive caps out, gets so tight that I am often required to use a wrench to get them off. Can you suggest any way to obviate the trouble, or suggest any shell that you think would be better than these? Ans. 1. You have been loading your gun about right, but if you can without too much recoil for comfort, use 4 drachms of powder and 1¼ oz. shot, it would be more effective. 2. In loading metallic or paper shells the powder should not be rammed hard, but put solidly in its place. 3. Metallic shell are more economical, but we prefer to use paper. Both are good enough and about equal in effect 4. Use Hart's shells and you will have no difficulty, we think.

USHA-WALLI SKA, New Ponca Agency, D. T.—I propose to build a steam yacht 26 feet long for river use, (current six miles per hour) now what width of beam should I give a boat of that kind and still have a good carrying capacity; and what sized engine and screw would I require to make a speed of eight miles per hour, up stream; and what would be the probable cost of the same? What do you think of the engines made for steam yachts by the New York Safety Steam Power Co.? Do you think they will suit my purpose? A short time ago I built a skiff 16 feet long, and would like to put an engine in her, temporarily, that I could use for a latho when occasion required What do you think of band iron for boat knees; and is there a preparation of any kind that will keep it from rusting? Ans. For steadiness and comfort your yacht should be not less than five feet six-inch beam, and should have an engine 2½ feet diameter by 5 inch stroke, and a wheel or screw of 24 to 28 inches, as your draught will allow. It is not possible you will realize the speed you desire, as no boat of that size has ever yet been accomplished it. The New York Safety Steam Power Co. are perfectly reliable, and are the only parties we know of building such machinery as you require. They make an engine 2½ diameter by three stroke, which will be just the thing for your skiff. Band iron, sufficiently heavy, will do well for knees. Use asphaltam varnish to keep them from rusting.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, AUGUST 3, 1876.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK,
Editor and Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, August 3d.—Racing: Saratoga. Trotting: Minerva, Ohio; Buffalo, N. Y.; Muskegon, Mich.; Treport, Ill. Rockaway Yacht Club exercises. Cricket: St. George vs. Canadians, at Hoboken. Base Ball: Louisville vs. Chicago, at Louisville, Ky.; Cincinnati vs. St. Louis, at Cincinnati: Athletic vs. Boston, at Boston; Defiance vs. Cincinnati, at Philadelphia: Our Boys vs. Madison, at Brooklyn; Crystal vs. Fallaway, at Brooklyn; Chelsea vs. Argyle, at Brooklyn.

FRIDAY, August 4th.—Trotting: Buffalo, N. Y.; Freeport, Ill. Regatta: Alexandria Bay. Base Ball: Peabody vs. Baltimore, at Baltimore, Md.; Enterprise vs. Jersey City, at Jersey City.

SATURDAY, August 5th.—Trotting: Buffalo, N. Y. Rifle: Team practice and matches at Creedmoor. Base Ball: Louisville vs. Chicago, at Louisville, Ky.; Cincinnati vs. St. Louis, at Cincinnati: Athletic vs. Boston, at Boston; Rivals vs. Alpha, at Stapleton, L. I.; Our Boys vs. Jackson, at Brooklyn; Redstockings vs. Hudson, at Brooklyn; Staten Island vs. Oceola, at Staten Island; Athletic vs. Eureka, at Brooklyn: Olympic vs. Hoboken, at Hoboken; Winona vs. Witoka, at Brooklyn: Crescent vs. Putnam, at Brooklyn; Chelsea vs. Mutual, at Brooklyn; Campbell vs. San Francisco, at Philadelphia.

MONDAY, August 7th.—Trotting: Piqua, Ohio. International Regatta, Saratoga Lake. Base Ball: Athletic vs. Boston, at Boston; Hoboken vs. Eagle of New Brunswick, at Jersey City.

TUESDAY, August 8th.—Racing: Saratoga. Trotting: Rochester, N. Y.; Piqua, O.; Pentwater, Mich.; Tiskilwa, Ill. Base Ball: Athletic vs. Hartford, at Hatford; Chelsea vs. San Francisco, at Brooklyn; Enterprise vs. Athletic, at Jersey City; Athletic vs. Volunteer, at Poughkeepsie.

WEDNESDAY, August 9th.—Racing: Saratoga. Trotting: Rochester, N. Y.; Piqua, O.; Pentwater, Mich. International regatta, Saratoga Lake.

—Sportsmen will find in our Natural History Department to-day, the first half of a "vest pocket" manual by which they can identify whatever shore-birds they may have shot while they take their lunch or lie in wait for more.

—An excellent illustration of the disappointment meeting nineteen out of twenty men who dig for gold, is found at the Centennial Exhibition. The British Colonies have erected a tall gilt pyramid to represent the bulk of gold taken from their mines by Europeans, amounting to $38,166,970. This seems a dazzling mass of gold, but the average yield to each man was only $658 for many years of labor.

—A very interesting and valuable article from our correspondent, "Piseco," on Guides and Game Protectors is unavoidably left over until next week.

—From excessive heat we have jumped to almost the other extreme, and spring overcoats may be seen on the morning train running into the city. Since the storm of Sunday and Monday the wind has continued from the east and northeast, and we are promised more rain by to-morrow.

EDITORIAL RAMBLES IN CANADA.

MATAPEDIA, RESTIGOUCHE, N. B., July 27th.

EDITOR FOREST AND STREAM:—

Our hostelry, in charge of mine host, the stalwart Daniel Fraser, who stands six feet four inches in his stockings, and ebarges $2 per day for board, nestles among some mountain spurs, one of which divides the waters of the Matapedia and Restigouche Rivers, uniting here. The Intercolonial Railway has a station at this place, and the tourist leaving New York on a given day, is dropped in front of the door within thirty-six hours. (Ten years ago, when I used to fish here, and wrote a description of the river for *Harper's Magazine*, the journey occupied five days). One can go first to Montreal, either by the St. Lawrence River, or the Grand Trunk Railway, and thence take river or rail to Quebec; or he can leave the Grand Trunk at Newport, on Lake Memphremagog, and take the Pasumpsie Railway direct to Quebec, thereby saving one day. From Quebec to Riviere du Loup the road traverses 120 miles of country occupied by the French speaking *habitans*, with a quaint little village every six miles, every village having its substantial stone chapel, and every chapel its priest and its patron saint. There are no less than twenty-four stations on the road, and of these no less than nineteen bear the names of saints not known outside of the Acadian calendar. From village to village there is an almost continuous line of farm houses. The River St. Lawrence is on one side of the river, with the blue Laurentian mountain range in the distance, and a range of hills girts the other side. The whole intermediate valley is fertile and vivid with green. Fences dividing the farms into equal longitudinal strips extend from the foot hills aforesaid to the river; the farm houses are midway, and nearly every house has its out-door oven, its barn, and its rude windmill for grinding grain. Thrift and comfort reign, and the earth annually yields its abundance. The journey is most charming, and the scenery constantly changes, so that the eye never wearies. French is the spoken language, and occasionally one meets a tri-color floating from a flag-staff.

At Riviere du Loup a large number of the passengers disembark for Carouna, a favorite watering-place on the St. Lawrence. At Bie is another resort of prominence, and at Trois Pistoles we find a perfect dinner from soup to dessert, well cooked, with prompt attendance and napkins, for 50 cents, with plenty of time to eat it. Ah! what a comfort! A little farther on is still another watering-place called Rimouski, with its large brick convent and seminary. Here we leave the river; soon comes Metis, and presently we reach the little hamlet of St. Flavie, where we leave cultivation and settlements behind, and begin to cross the dividing ridge that separates the St. Lawrence River from the Bay Chaleur, an arm of the Gulf of St. Lawrence. Hence to the River Restigouche, at Matapedia, all is a wilderness, where the moose ranges and the trapper finds rich returns of pelts. There are several fine rivers and streams between Point Irvi, which is opposite Quebec, and Rimouski, some of which contain salmon, and nearly all trout; but their lower waters are much fished, and one is surprised at the excess of population rather than the absence of it, which his fancy prepared him to expect. Civilization progresses at such railroad speed that it is difficult to keep in advance of it. Even here on the quiet Restigouche, where the Matapedia and main river once mingled their waters with a delightful murmur of aboriginal wildness, the navvies have tumbled the railroad ballasting into the meadows, and built up water tanks, stations, switch signals, car sheds and bridges. All the primitive beauty is marred, and the two little churches that have sprung up here like mushrooms cannot supply the quality of worship we wot of away up among the forest aisles long ago. Mr. T. C. Clarke, of the Phenixville Bridge Company, in Pennsylvania, who built the splendid iron structure over the river here, came down the other day; but although he is an angler of the old school, the manacled river had not charms enough to tempt him to stay and he departed.

From New York to its terminus there is a Pullman car over the whole Intercolonial line, and it is delightful to enjoy these luxuries of travel while we penetrate into the unexplored recesses of a new wilderness. From St. Flavie hither the railroad follows throughout nearly its whole distance the route of the old Metis or Kept road, surveyed many decades ago. It is up grade for thirty miles, through expensive rock cuttings, spanned by huge timber sheds to keep out the drifting snows of the long and tempestuous winters, so that one need not make the journey to California in order to see these quaint structures. The expense of construction has been great, but the work seems thoroughly done, and the Canadians are justified in boasting of its superiority. At the summit is Matapedia Lake, a sheet of water several miles long, filled with splendid trout and salmon trout (here called tuladi); and thence the route is along the valley of the Matapedia River, which empties out of it in full volume, and abounds in large trout and salmon, and sea trout in their season. For sixty miles there are only a few cabins, but the ever-shifting mountains and the winding river is enchanting.

And now we come back to Dan Fraser's again. Directly in front of the house and less than twenty rods distant, the two rivers join, scooping out a magnificent salmon pool, beside which the Indians used to camp and spear many a salmon; but the law prohibits them now, and the glimmering light of the torches is no more seen on the river. Beyond the pool is a crowded island, and on the other side of the island another pool, where S. R. Gifford, the artist, landed a 27-pound salmon two days ago. From this pool down, for a distance of seven miles, the river is open to the public at $1 per day per rod. At the railroad bridge is a grand pool, and there are others below. Altogether the privilege is a valued one. Of the Main Restigouche, Mr. Sandford Fleming leases the lower half, and C. J. Brydges of the Grand Trunk Railway, the upper half. Both gentlemen are liberal in extending privileges to their friends; but upon principle and policy the whole river ought to be open to the public on the $1 per day condition. There are such vast crowds of anglers here anxious to fish, that the revenue to the government would be much larger than is now obtained from the two leases referred to, while there could be no danger of depleting the river by rod-fishing, no matter what the number of anglers. This will always be a focal point for fishermen, and so long as fishing exists, here the anglers are gathered together. I sent you a long list the other day. Since writing, I have to add the names of Messrs. McAndrew, Gregor and Tapp, of Nova Scotia; James Chubb and J. McConnell, of St. John; J. W. Lanagan, of Boston; Judge Shepley, of Portland, Me.; Mr. Hun, of Albany; and Sage, of Brooklyn.

Just now the fishing seems to be done, and nearly all have left. To-morrow I shall "fold my tent and silently steal away." No doubt there will be another run of salmon, but there is no use waiting upon uncertainties. The largest trout are far up the river, and the two best places for trout on the Matapedia within twelve miles are much fished.

The Cascapedia seems to have been the king river this season. It is reported that Mr. Lewis, Almon G. Dawson and friends, have taken over *two tons* of fish from it. Mr. Dawson has given his testimony in FOREST AND STREAM as to his extraordinary success. Messrs. Gifford and Craven have gone to the Nouvelle for sea trout, and others are on the Escuminac. Both rivers are on the north side of the Bay Chaleur.

The Indians here who had never before seen a locomotive have now gotten over their astonishment. They have a mission and chapel fourteen miles down the Restigouche, with a population of 200 souls. A large number constantly lounge about Fraser's house, ready to be employed by the anglers, and their light birch canoes are drawn up on shore below, very much as the boats are seen at Paul Smith's and Martin's in the Adirondacks. Indeed, the scene here is altogether similar, although more swarthy. Two men go to a canoe always, and the charge for the whole is $2.50 per day. An outfit of provisions can be obtained here, but no tents. In the fall there is good moose shooting up both the Restigouche and Matapedia Rivers, and by making portages from the headwaters of the Restigouche branches, one can carry his canoe into the Rimouski, the Tobique, the Nepissiguit and other rivers, and thereby traverse an indefinite tract of wild country without much difficulty.

The weather has been stormy and full of showers for many days with a low temperature. HAL.

P. S:—The following named anglers have been reported on the rivers given beneath: On the *Nepissiguit*, Messrs. J. DeW. Spurr and J. W. Nicholson, of St. John. On the *S. W. Branch of the Mirimichi*, J. J. Dyer, J. W. Lanergan, and H. Wendell, of Boston; Robt. Orr and A. H. Wood of Fredericton, and C. A. Smith (Mayor), C. R. Robertson, W. Burr, and Mr. Williams, of St. John. H.

GAME PROTECTION.

The Syracuse *Journal* says that "Very little attention is paid to the enactment of the Supervisors of Oswego county, forbidding the killing of trout during a period of three years. Trout are being caught in various places in the county for market. If the Supervisors did not intend to enforce their new law, they shouldn't have made it." If the Supervisors will go to the Legislature and have a bill passed prohibiting the taking of trout in Oswego county for three years, it will probably be of some effect.

NEW YORK.—The Standing Committee of the New York State Sportsman's Association, comprising Hon. R. B. Roosevelt of this city, chairman; Hon. C. W. Hutchinson, of Utica; Col. George W. Flower, of Watertown; Dwight H. Bruce, Esq., of Syracuse; and J. M. Witmer, Esq., of Niagara Falls, meet at Utica on the 17th of August. We should like to have the sense of our readers in this State on the question of the abolishment of summer woodcock shooting, and will lay the same before the committee.

SPOILING A TROUT POND.—An important case affecting the owners of trout ponds was decided at Flushing, Long Island, last week. It seems that Mr. H. Seaman owns a valuable trout pond at Ridgewood, L. I., and the Lee family own a farm near the stream which supplies the pond with water. In 1874 they cut a drain from the house to the stream, through which waste water ran, and the effect was to corrupt the water so as to cause the death of a large number of trout. An action was begun to restrain the Lees from using the drain, and for damages, and the matter was referred to Richard Ingraham, of Flushing. He has reported in favor of the plaintiff, and a permanent injunction has been issued against the Lees.

—Boating men will find in the usual column this week a very interesting letter from our Philadelphia correspondent, describing the practice of the English oarsmen, now in this country, and other matters pertaining to the great rowing events shortly to occur on the Schuylkill.

—T. Umbellus of Peotone, Illinois, at present sojourning in Boston, Mass., would confer a great favor by sending his present address to "Mohican," this office. M.

OUR CENTENNIAL LETTERS.—NO. 8.

NATURAL HISTORY IN THE SCHOOLS—THE GOVERNMENT COLLECTION OF ANIMALS.

CONTINUING the investigation of the progress the study of natural history is making in the public schools of the country, which was begun in my last letter, the next State exhibit visited was Indiana, where an improvement upon Ohio is noticeable. The Indianapolis high school sends a case of fishes of the State in alcohol and a local herbarium, both made by the scholars; Bedford sends her local *hortus siccus*, and Lafayette a very instructive collection illustrating economic botany, by showing the useful woods, the edible grains, vegetables and fruits in their natural condition (when practicable), and preserved in all the ways known to the cook and caterer. This was very interesting and attracted all eyes. Lafayette also gives an idea of her aids to instruction by some good charts for the analysis and illustration of animals and plants; and Huntington makes a prominent display of minerals and geological specimens from her school cabinet. It is evident that there are many young naturalists in the Hoosier State.

Illinois's exhibit of natural history education is chiefly confined to material sent by the Industrial College at Champaign, which has been selected from its large museum. This college provides a regular four-year's course in natural history under the guidance of Prof. Don Carlos Taft. This university education, however, was not what I was after, although there can be no doubt of the great influence such an institution exerts upon the teachers of the vicinage. It may be partly owing to this that the State now requires its common and graded school teachers to pass examinations in natural history, botany, and physiology before they can obtain a certificate to teach. The consequence is a general interest in zoology among young persons all over the State, and each school prides itself on its little collection. There is where Illinois has taken the lead of her sisters, and they must hurry up their slow ideas to meet the demaod of the age for a system of education which shall take some notice of the present and practical as well as the antiquated and classical.

In Michigan there seems to be little general interest outside of the shadow of Ann Arbor, whose splendid museum sends some cases of pretty shells to ornament Michigan's space. Grand Rapids, however, I am told, is one oasis in the desert, and the Agricultural College at Lansing is another. Wisconsin shows nothing at all for us, but Iowa deserves notice. At Davenport Prof. W. H. Pratt has a well-kuown collection in conchology, and Prof. Gustave Haupt a large herbarium, so that great interest has been aroused in the subject in all the schools, and I was told of several enthusiastic young naturalists among the scholars. Burlington, Iowa, claims to possess the finest series of corals in the country; and the teachers profit by this opportunity for illustratioo. Keokuk is another bright spot, and the Boards of Education encourage attention to this study in all the schools. Physiology is at present required of teachers, and it is intended to gradually add to the requirements many more of the natural sciences.

The result of the inquiries suggested in the first of my last letter may therefore be considered encouraging on the whole; and it is with pleasure that I record this. A search through Canada reveals much similar progress and somewhat better apparatus. So that at last America is coming to rank with the mother country in the general watchfulness for the facts and phenomena of nature which exists in the minds of all her even slightly educated citizens. The good results of this cannot but make itself apparent in the intellectual aspect of the country, tending to make us more observing, thorough and critical, less dogmatic, rude and credulous.

The most conspicuous object in the centre of the Government Building is the group of stuffed animals brought from the National Museum. It is a fine display, and probably as well disposed as the circumstances would allow. Among the cats there is a puma, a jaguar, an ocelot, a wild-cat, a Canada lynx, an eyra, and a yaguarundi, which completes the native list. The list of wolves and foxes, with their varieties, is equally complete, the most interesting among them being the different races of the red fox. The red fox was named by Linnæus *Vulpes alopex*, wing-footed. Our common species is a sub-species *fulvus*, and of this there are three races: *a.* the common typical fox (var. *fulvus*); *b.* the cross fox (var. *decussatus*); and *c.* the silver or black fox (var. *argentatus*); the prairie fox forms a second sub-species, *macrurus*. The black fox is somewhat larger than the red, and is generally very black, but some individuals have so many white hairs as to give them a whitened or silvered appearance here and there. The cross-fox is equally well named. Its size is a medium between the other two, and all its characteristics partake of both. The hair is a mixture of red, black, and gray, and the combination, although handsome, is grotesque. Both this and the black fox have a white tuft at the end of the tail, as is said to be true of all the *Canidæ*. I noticed this peculiarity in the tawny, wolfish "dingo" or wild dog of Australia, which cannot be tamed by the colonists, and is a great pest. This reminds me of "a little story." When Japan was first opened to Americans a Yankee went there who was looked upon with suspicion, and attempted to win the Japs by a show of superior knowledge. Once the conversation turning on some jet-black dogs there, the Yankee said they could not bring him a dog so black but he would find white hairs on him. They denied it strenously, and at last produced a coal colored canine for trial, when the Yankee parted the long hairs at the tip of the tail, and lo! a white tuft. This is a good and instructive story, but I don't stake my reputation on its details.

The big gray wolf, the sharp, coon, the judicial ermine, the wakeful weazel, the ugly, knowing wolverine, protegé of Michigan, the festive skunk, the sly otter, and bulky badger, are all here, but must be passed by until we are face to face with *Ursus horribilis*, the grizzly hero of many a romance and hunter's yarn. There are three of them here of about the same size, evidently old fellows, for their claws are well worn, and their hair in patches has grown clayey white. They are not so much larger, in length and height, than the glossy black bear (*U. americanus*) standing near them; but they have a much heavier look, and the head is broader and more massive throughout. Still it is not so very difficult to accept Mr. Allen's doctrine that they are both of one species, and identical with the common bear of Europe. One of these specimens died a captive in Washington, age 16. His coat is the deepest brown (indicating youth?) of any of them, and his claws are about five inches long. I noticed in the other two that the hair upon their legs, sides of the neck and ridge of the back was the last to lose its rich brown color. Dwarfing the grizzlies in comparison, the great polar bear stands among them like a white giant. He is seven feet nine inches long, but the elongated neck and slender, snake-like head makes him seem even longer. His hair is everywhere yellowish-white, and falls over his immense feet like the fringes on an Indian's Sunday moccasins. I can appreciate his great swimming powers and endurance; he is built for it. If I remember rightly this fellow has two plain round holes in his coat, one on the hip and another on the shoulder, where the fatal balls entered his noble body.

Close by an irregular pile of boxes covered with painted canvas makes a very presentable heap of rocks, whereon appear to have climbed a colony of fur-seals. There are sixteen of them, male and female, big and little, in life-like attitudes. The patriarch of the crowd is large and black, and the young ones, rolling about in play or "drawing it mild" from their mother's udders, are small and black, while the middling-sized females have very much of yellowish-white upon their coats, particularly in front. All their skins must be dyed before going to market. Adjoining them is the enormous sea-lion (*Eumetopias Stelleri*), with which visitors at Central Park are familiar. The male rears his head five feet above the floor, but the female is much smaller, and of a tawny color everywhere, while the little young one is grayish-black, and about the size of a harbor seal.

This masterpiece of taxidermy, with most or all of the others, is the work of Mr. Julius Stoerzer, who recently died. He was the taxidermist at the National Museum, and was the most thoroughly trained and scientific workman in the country. He was a pupil of the celebrated Martin.

Another immense animal is the sea-elephant (*Macrorhinus angustirostris*) somewhat resembling the sea lion, but belonging to a different family. Both of these giants live in the North Pacific, and are abundant on the islands off the coast of Alaska. Between the two are grouped nearly or quite all the species of seals belonging to American waters, such as the harbor seal, the leopard, the ringed, the harp, and the hooded. They divide attention with the walruses, which are of greater rarity in museums. Looking at their gigantic and strong jaws it seems to us that the polar bear, powerful as he is, would have a hard tussel in conquering these animals although he is said frequently to do it. They are unwieldy, however, while the bear is nimble. The Atlantic walrus (*Rosmarus Cookii*), with whose picture all are familiar, is very much larger in every way than the Pacific species (*R. obesus*). Its hide is brownish-black all over, very thick, wrinkled, and without hair, so that it looks like that of the manatee; the great canine teeth or "tusks" are very long, and twisted. The hide of the Pacific walrus, on the contrary, is covered with short hair, is tawny yellow, and the tusks are short and straight. The carcases of these ungainly beasts serve a great number of utilities, every portion being saved by the Eskimos for some purpose. Their ivory is of superior quality and high-priced. Take it altogether, the opportunity here afforded for observing and comparing these little known flipper-footed mammals of the sea is a most excellent one, and should by no means be neglected.

This brings us to the ungulates. The buffalo is the centre of a group—his great shaggy head lowered in defiance to the two musk oxen near him. The ancient and rare musk ox of the "barren grounds of Arctic America" is all but gone. It is nearly as large as the domestic ox, and in physiognomy is decidedly bovine, but the long hair falling nearly to its feet give it the sheep-like appearance to which it ows its generic title, *Ovibos*; its specific name, *moschatus*, having reference to the fact that in the rutting season its flesh is strongly perfumed with the odor of musk. The horns of the musk ox are extremely large and flat at their base, forming a kiod of helmet upon the forehead; in one of the two examples (the male) their bases quite meet, as though the ox had parted its hair in the middle, while in the female their bases are about nine inches apart. From this broad root the horns sweep boldly downwards, close to the side of the head, and are again hooked upwards. The muzzle is covered with hair, except just at the nostrils. These oxen are fast disappearing even from their lonely haunts in the far North, and the Smithsonian is fortunate in possessing this finely mounted pair.

The sanctimonious mountain goat and the brave looking mountain sheep of the Rockys are here, and near them the spry little prong-horn. Then come the deers, beginning with the moose, which is represented by several pairs of antlers, and a calf. The *Tarandus rangifer* has been sub-divided by the taxonomists—of whom the chief is Theodore Gill—into two sub-species, viz., *caribou*, the woodland caribou, and *grantlandicus*, the barren ground caribou. Both are before us. Of the first there are two individuals; one has its horns very much alike on each side, with twelve or fourteen points on each side; the other, a larger one, has antlers much palmated, with twenty-six points, and the front or brow segments especially flattened, and carrying five points on each side. The second sub-species is a smaller animal, standing only three and a half feet high, but has large and strong antlers. They branch outward and backward thirteen inches before giving off a short prong, which points packward; then they turn and extend outward and forward twenty-eight inches, to a palmate extremity, where three bifid prongs are given off close together; from near the base of each horn in front, projects down over the forehead a prong twelve inches or so long, which becomes vertically flattened and split into many points at the end, but in this specimen these are very unequally developed. The whole arrangement, compared with other antlers, is highly grotesque.

Grouped on this same stand are the Virginia deer (whose antlers carry twelve points) and an albino of the same, the mule deer of the Plains with horns like a miniature elk's, and the towering elk itself, which can almost lay the tips of its huge antlers back upon its crupper. A noble animal is the elk, and one reads with dismay of the unrelenting chase which is fast exterminating it in its native mountains and valleys. Every pillar in this part of the building is adorned with one of their heads, all, it is to be presumed, of the finest development, as, indeed, they are if my own recollection of what the hunters in Colorado call "big" does not fail me. Out of twenty-three heads examined all carried either twelve or fourteen points, usually the former. An English writer mentions it as "remarkable" that the antlers of no two elks are precisely alike. Even if his proposition was a true one he might have found far more startling illustrations in other deers, the caribou, for instance, for the elk's horns are wonderfully regular, and have, above all others, a noble, strong and dignified aspect.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

CENTENNIAL ROWING NOTES.

PHILADELPHIA, August 1, 1876.

EDITOR FOREST AND STREAM:—

Greater interest attaches to the training of the Trinity crew, and naturally, than to any other crew ever at work on the Schuylkill.

Their boats arrived here on Tuesday of last week, and consist of a roomy gig for practice, their racing shell, or, as they call it, ship, and Mr. Close's single. These boats are of good workmanship and do not differ, except in a few minor details, from the work of the best American builders. Their gig is fitted with seats on grooved wheels, running on metal rods, so arranged that by no peradventure can they be unshipped in rowing, and barring the noise they made are an improvement over any gears of the kind I have seen. Their racing shell is a trifle wider perhaps than the same weighted crew of this country would have had built, but not otherwise different. The men are not so large nor quite so heavy as was expected, but even at a casual glance they are not a crew that one would pass by without taking a careful second look, especially if one expected to row against them.

Their stroke, Mr. Penrose, is the tallest and *seemingly* the lightest man in the boat, but tough and wiry looking, besides his 159 pounds, all good, are worth far more in a mile and a half or any other race than a heavy passenger. All of the men are heavier than they look. They are out every evening for a practice pull, as yet, with Mr. Walker, the substitute, rowing in Mr. Close's place. Mr. Close has been coaching them from the Undine's eight-oar, and it is not difficult to see that he understands exactly what he is about. He is quick to detect even the slightest fault, and by no means slow to correct it. They pay more attention to correct form than do the generality of American crews. Slowly and carefully the men are taught to pull until their style is uniform, and the faults, as far as may be, corrected. Their hard work will begin when that result is attained.

The remarks on their style by men along the river, both boating and non-boating, are interesting, amusing, and sometimes indicrous. The men are exponents of what is usually called the English stroke, but might, I think, more properly be called the English University stroke; for there is as much diversity between the different styles in England as there is in the different strokes here. Criticism, either favorable or adverse, is unfair so early in their practice, as they are together now for the first time as a crew. What most strikes one is the rapidity of the first part of their recover, the deliberation, amounting almost to a pause, in the last part, the powerful surge backwards of their bodies, their straight and perfectly flat backs, and their neat, clear finish. Their catch is not better, in fact not so good as I have often seen, and their time by no means perfect.

These faults will no doubt be corrected after a little. They have removed from the Park View Hotel to private lodgings, which will be more agreeable to the quiet habits of a training crew.

I have seen Mr. Close sculling but once (although he has been out several times), and then only for a few hundred yards. His pulling was clean, and in no wise lacking in power. He is by odds the most powerful looking man in the crew, and has the advantage of the rest in years and experience. They express themselves pleased with the river and with things generally, but they cannot help feeling annoyed by the persistence of the newspaper interviewers, who would pester the life out of them if their hosts did not give them all the protection possible. Far worse even than this must be the frightful bosh that has appeared in a few of the local papers. The reporters are a hard worked, painstaking class as a rule, but some of them who, to quote from a Yale man, "do not know a boat from a coal scuttle," have taken it upon themselves to imagine much. How they succeeded in getting it published is a mystery, and why a paper in such standing as the Philadelphia *Times* should have allowed "itself to impose on itself" is more than a mystery.

The entries for the various events are pouring in on the Regatta Committee, and there are at this writing eighty-seven boats entered in all classes, with more telegraphed as coming. If one half of these are starters the regatta cannot fail to be the largest ever held in this country, and the crews entered will make it also the greatest. It is greatly to be regretted that more of the American colleges have not come forward to meet the men who have come so far to row in a truly International Regatta. Harvard will not enter, perhaps because they think that after their trip to England Oxford should have come—perhaps they are

miffed beenuse the challenge of the R. A. A. C. to row at Saratoga was declined—perhaps they could not get a crew to come (which, with proper efforts, is not likely), or perhaps they were afraid. The latter is scarcely a fair imputation after rowing so good a second in the Inter-Collegiate Race. Cornell will not come because of Capt. Ostrom, or at least it so looked until Saturday. There have been many college men here the past week, and all express themselves that their feeling will be one of great mortification if the college who won all three prizes this year, and two out of three last year, do not enter. One would think that the Alumni of the College had removed the great objection, but Captain Ostrom urges "that they have spent all the time consistent with a college course," and that "they cannot get a boat to suit," and that "a crew cannot be got in shape in time," and further that he does not think the American colleges are under any obligations to row the Englishmen who refused the challenge of the Association to row at Saratoga." His first reason would lead one to suppose that he had carefully read Dr. McCosh's excellent letter on College Rowing. The Captain knows even better probably than the Doctor the influences of the surroundings at Saratoga—the causes that led to bringing the college crews there and that have reduced the entries there from thirteen last year to six this, with the likelihood of none at all next. Even so far off as Cambridge, Oxford, or Dublin, one can see that Saratoga must have her hotels filled, and that the regattas are brought there to fill them. Besides, a challenge is a far different matter from the courteous invitation extended under the sanction and approval of the U. S. Centennial Commisson to take part in what is really a portion of the great exposition. The Captain's other reasons are of no moment, for a cedar boat can be had in ten days, and unless I have greatly misunderstood Mr. Waters himself, a paper boat can be ready in even less time. As to getting four men into shape from such an excellent six in the time between now and even the first of September, the excuse is trivial. Yale and Columbia have come up nobly, and will both be here to battle each for its alma mater. Princeton's entry is shaky. Discouraged by their success, or rather the lack of it, they fail to respond to Captain Nicoll's call. However, Nicoll will take a hand himself with his club, the Undine of Baltimore, in the Amateur Races.

Where the crews for the graduate is to come from I can't tell, Dublin being at present writing the only entry. In this country a graduate either joins an amateur club and rows with it or gives up the sport entirely. Yale is anxious to have a three mile race, and it is more than likely that at once the Dublin arrive such a contest can be arranged. The Professional Races, especially for singles, will be very full. The fours so far are from Halifax, the Paris crew from St. John, the New York (Biglin), and the Tames crew. The latter, Spencer Thomas, Higgins, and Green, seem to be willing to take all the purses, for besides their four, Green and Thomas, and Higgins and Spencer will row pairs, and all four will scull. Higgins' chances, from the record, are not bad, unless Trickett of Australia turns up, in which case there is no telling.

The Faulkner-Regan crew have disbanded, as the Pittsburgh crew has also done. Faulkner and Regan will go in —pair oar. They will have, besides the Thames men, the Biglins, the Ward brothers, and probably Coulter and a partner for opponents. As the Biglins rowed down Coulter and Garritt, the latter may be counted out unless they are in better form.

The detailed entries cannot be got at until the committee make their announcement. This is the day for closing, but they will not refuse any that were mailed in good faith this date, as for instance, one will start on the mail to-night from New Orleans and be two or three days in the mail.

When I said last week that no Schuylkill Navy Club would enter I thought I spoke by the card, if so, there was a misdeal, for now in the lists are the Quaker City, Pennsylvania, and Crescent, the former with a four, a double and four singles, the two latter each a single and a prospect of more from the Undine and Walter.

These entries are probably not due to what FOREST AND STREAM said last week, so much as to a desire to uphold the credit of Philadelphia. As the bulk of these crews openly announce that they will not train, but go in scratch, it is barely possible that the giving of bronze medals to all starters may have been a wise provision, if the committee's object in offering them was to swell the numbers. As the Undine holds the four our champion flag they should not refuse to put in an appearance, but they will in that race.

On Saturday last an Undine's four, "L'Hirondelle," met with an accident and a double scull boat. The shell is minus a nose, and the double plus a hole. The ground for the temporary boat house has been cleared, and the house will be up in a few days. The grand stand at the finish is almost completed, but unless another is put up on the other side of the river I think that many will want places that they won't get.

The National Association's Regatta will begin on August 23d, continue two, perhaps three days. As their entries do not close until the 8th there is no knowing yet who will row. As many crews will want to try what they can do before the great event, the lists will no doubt be well filled.

The clubs now holding the prizes will not be likely to let them go by default.

The vexed question, "Who is an amateur?" does not yet seem to be settled, and the feeling is that the Executive Committee must meet it now. The definition has long been laid down and amended and tinkered until one would think it met every case. It does, but there are cases that, by some length do not meet it. It is violated every day in spirit if not in letter. That the evil exists we all know, that it is a crying one no one doubts, that the offenders can be met with positive evidence is doubtful, but that it must soon be eradicated is certain, or the Amateur Association will cease to exist. The action of the Executive Committee will be looked for anxiously, and the Centennial Committee can certainly not ignore that action. A man or crew barred the National Association Races will have small chance of even "a bronze medal" in the International.

The Single Scull Prize for the International Regatta, a diamond badge, the handsomest ever offered in the country is completed and for some time has been on exhibition at the Centennial.

The double-scull and pair-oared prizes are being made by Tiffany, of New York. The design for the four-oared prize will be in Bailey & Co.'s hands to morrow.

The die for the medals is being made by Robbins, Clark & Biddle, and is almost done.

The medals will be uniform in size and design. Gold for the winners, silver for the second, and bronze for all the balance of starters. The running expenses of the re the regatta, guaranteed by the clubs of the Navy, are well in hand. The money for the proper entertainment of the foreign crews for the professional purses and for a host of other attendent expenses is not yet raised, but a meeting of citizens at the Mayors office on Thursday last gave assurrance that this part of the finances will be forthcoming. It is not long since it was announced that New York would raise $5,000 for the promotion of the regatta, but that appears to be all there is about it. SCULLS.

—The tenth annual regatta of the National Association of Amateur Oarsmen will be held on the national course, Philadelphia, on Tuesday, Wednesday and Thursday, August 22d, 23d, and 24th. The races will be for single sculls, pair-oared shells, double scull shells, and four oared shells, and the prizes are the elegant and costly challenge cups and plate of the association. An individual prize will also be presented to the winning oarsmen of each race, and in addition the association will present a handsome silk flag to the clubs of the winners. Entries will close August 8th, and must be made to Henry W. Garfield, Secretary, Albany, N. Y.

THE BENNETT CHALLENGE CUP.—On Thursday last shortly after 4 P. M. the schooner yachts Idler, America, Wanderer, Tidal Wave and Countess of Dufferin were started from Sandy Hook lightship for a race to and around Brenton's Reef lightship and return. The prize was the elegant cup presented by Commodore Bennett, and an entrance fee of $500. There was no time allowance beyond the difference in time of passing the starting point, and this amounted to but a little over two minutes between the Idler, the first to cross, and the Countess, the last. The Idler well sustained the reputation she has gained this season as one of the fastest yachts afloat, and the Tidal Wave met with her usual number of mishaps. The America was also unfortunate, parting her bobstay on the return trip, and being thrown out of the race after showing rare weatherly qualities. The Countess of Dufferin did not show the speed anticipated of her, although something must be allowed for her sails, they hardly being suited for a race. The Idler, Tidal Wave and Wanderer rounded Brenton's Reef lightship almost together, Countess being next, some forty minutes behind, and the America last. After leaving Brenton's Reef the wind was ahead, and the Idler and America gained in going to windward. The Tidal Wave and Wanderer went inside of Block Island, while the other yachts took the inside passage. At 11 o'clock on Friday night the Idler was a mile and a half from Sandy Hook lightship, when the wind died out and she was becalmed for sometime, reaching the club house anchorage at five o'clock on Saturday morning. The other yachts were also becalmed, and afterward caught in the rain squalls of Friday night. The following table shows the time of arrival:—

	Start.	Brenton's Reef.	Sandy Hook Light.
	p. m.	a. m.	a. m.
Idler	4:12:30	6:37:16	12:36:46
America	4:12:53	7:18:56	4:00:00
Wanderer	4:13:29	6:48:45	2:42:30
Tidal Wave	4:12:59	6:37:35	2:40:00
Countess of Dufferin	4:14:56	7:17:06	3:30:00

The Idler now holds the cup until challenged for it. The result of the race, as far as the Canadian yacht is concerned, indicates that, taking her present "form" for a guide, she has no chance of winning the "America" cup in the races with the Madeleine.

COLUMBIA YACHT CLUB.—This club formally opened their new club house at the foot of Eighty-sixth street, North River, on Thursday, the great event of the day being the race for the ladies' pennant, for which the following yachts entered:—

Yacht.	Owner.	Yacht.	Owner.
Emma T.	J. S. Backer.	Gem	John Frick & Co.
Lily	J. A. & R. H. Weaver.	Annie L.	G. E. Gammon.
Journeyman	R. McWhinney.	Henry H.	Holmes—Hudson R. C.
Au Revoir	G. Heep & A. Murphy.		

The course was a triangular one, being five miles in length. The Emma T. won the pennant, sailing the course in 29m. 45s., the Journeyman second.

ROCKAWAY YACHT CLUB.—This is the fifth annual regatta week of the Rockaway Yacht Club. Yesterday the regular club regatta was sailed, but we go to press before a report can reach us. This evening there is a moonlight excursion and reception, and on Saturday a clam bake and ladies' picnic at Trenchard Inlet. The Regatta Committee are Daniel Lord, Jr., Commodore, Chas. A. Cheever and Wm. Lummis.

BEVERLY YACHT CLUB.—The second regular regatta of this club was sailed on Friday last off Nahant under very favorable circumstances. The following table gives a summary of the event:—

FIRST CLASS.

Name.	Owner.	Length.	Actual time.	Corrected time.
		ft. in.	h. m. s.	h. m. s.
Waif	E. W. Codman	26 9	2 04 03	2 02 41
Fanchon	A. Borges	25 6	2 11 58	2 07 31

SECOND CLASS.

Water Lily	P. Gumi, Jr.	19 0	1 43 49	1 34 46
Ibis	H. C. Leeds	19 4	1 45 35	1 36 51
Amorita	J. G. Sharp, jr.	18 0	1 54 48	1 44 45
Peri	George Lee	18 6	Not taken.	

THIRD CLASS.

Virginia	C. H. Plympton	16 4	1 49 49	1 37 33
Tulip	W. Burgess	16 4	1 56 41	1 44 25
Avis	W. C. Haskell	16 8	Not taken.	

As will be seen by the above summary, prizes were won in the first class by the Waif, in the second class by the Water Lily and Ibis, and in the third class by the Virginia and Tulip.

A LONG CRUISE.—The Utica *Herald* says: John E. Starr, E. Brandigee, of Utica, and David Lewis, of Manlius, start to-day, with a row boat, on an extended trip. They proceed on the Erie canal as far as Higginville, from there to Oneida Lake, Oneida and Genessee River to Oswego, across Lake Ontario to Cape Vincent, up the St Lawrence River to the Richelieu, to Lake Champlain, to Lake George, to the Hudson, to Cohoes and from there home. They expect to be gone about six weeks. The distance is about eight hundred miles. The boat is fourteen feet long. They will camp out for a while in the Adirondacks.

—The Madeleine is at Greenville, Conn., being thoroughly overhauled for the races with the Countess of Dufferin, now set for the 10th, 12th and 13th inst. Her sails have been unbent, and are in the hands of the sailmaker, and everything will be done to insure success.

PORTABLE BOATS.

CLEVELAND, Ohio, July 19th.

EDITOR FOREST AND STREAM:—

Your correspondent Wm. H. Rollins is mistaken as to the invention of portable canvas boats or canoes. I saw one in Cincinnati in 1846. A lieutenant took it to the Rio Grande during the Mexican war, and was drowned by its getting a hole punched through the bottom and upsetting. I built one in 1856 14 feet long by 30 inches wide. It was made of a jointed hickory frame and heavy canvas. I took it to the marshes at the head of Lake Erie, and in four days of rather hard usage wore the sides completely through so that they had to be patched. On the fifth day, when pursuing a wounded duck, ran on a snag that tore a hole in the bottom nearly four feet long. Fortunately I had a light setting-pole in my hand that kept me from sinking. But I lost powder-flask, shot pouch, and about ten pounds of shot besides.

The sense of insecurity felt when going through dangerous places is enough to banish all pleasure for the time. No amount of assertion will convince a thinking man that these boats are snag proof.

Mr. A. S. Winchester, of South Windham, Conn., with a friend, were in one of "Blank's" portable canvas boats advertised as perfectly safe and very durable, when it ran on a small twig, tearing a hole in the bottom that they could stick their hands through. They had to jump to save themselves. I could mention other instances showing that the experiences of Colvin, Robbins and others do not prove a canvas boat to be a safe one in rough places, or that its advantage in portability over the ordinary wooden boat is equal to its disadvantages in other respects.

W. E. BOND.

Mr. Bond's experience has been unfortunate and not at all in accordance with that of many others who have used canvas boats for years with perfect safety and satisfaction. We believe that canvas can be made so tough that, until rotted by mildew, which would not occur if it was properly waterproofed and cared for, it would be serviceable and strong. The following letter is from a gentleman who has tried them with success:—

MARYLAND CLUB,
BALTIMORE, July 17th,

EDITOR FOREST AND STREAM:—

Could you communicate with Mr. Wm. H. Rollins of Boston, who wrote to you on the 20th of June last in reference to canvas canoes? I should like very much to have one built according to his description of the canoe constructed by Mr. John H. Treat, and Mr. Rollins says in his letter that he will give all the information necessary to build one, as they are not in the market.

I have had a great deal of experience with canoes, both in this country and in England, and agree with Mr. Rollins that, for strength and rough usage, there is nothing like a canvas canoe. I built one on the Mediterranean, at Cannes, 15 feet long, 30 inches beam, and 10 inches deep. First I made a light framework of wood with an oak keel and sawed timber; then had longitudinal strips 2½ inches apart of light wood. Over this frame I stretched tightly a covering of hemp canvas as I could get cotton then; brought it over the gunwales meeting in the middle, thus forming the deck of the canoe. After this I gave the canvas a coat of oil and two coats of paint, then put an oak keel outside of the canoe to protect it in going ashore; there was a well 6 feet long and an apron to keep out the water when rough. I used a small jig sail and double paddle. In this boat I coasted from Cannes to Genoa and back, and landed in some very heavy surf several times. She weighed only 60 pounds and was very strong. Since then I have had several other canoes, but none of them have proved as satisfactory for real work.

I have now a small iron schooner only 30 feet long, 6½ feet beam which draws 3 feet 4 inches. She was built entirely according to my own design, and is three years old, has proved herself a perfect sea boat, also very comfortable on a long cruise, having a nice little cabin, and is in my opinion much better than the yawl "Roh Roy" of McGregor. If you think it will be of any interest to your readers I shall be happy to furnish you with drawings and a full description, together with some account of the cruises I have made. W. O'SULLIVAN DUFFEL.

[We shall be indebted to our correspondent for his plans and report.—ED.]

New Publications.

MAGAZINES.

The flavor of idleness rests upon all the magazines this month, an idleness born of the summer season when the lassitude caused by a heated term calls for reading of the lightest and most cheerful description. *Scribner's* for August is labelled "A Midsummer Holiday Number," and its contents are adapted for the season. The illustrated articles are unusually numerous and interesting, notably Mr. Wheeler's "On the Iron Trail," a pleasant description of a trip through Kansas and Colorado. Mr. Bret Harte's story "Gabriel Conroy" is concluded in this number, and Mr. Jack Hamlin is killed in the most pathetic manner. Perhaps it is owing to the lapse of time since we read the first parts, but we must confess that the *denouement* is somewhat inexplicable. Mr. Bryant and Richard Henry Stoddard both contribute poetry, and the short articles and editorial matter are fully up to the *Scribner* standard.

St. Nicholas, the other of Messrs. Scribner's publications, is also entitled "A Midsummer Holiday number," and is full of charming entertainment for the little folks. The old story of the "House that Jack Built" is told in a novel and interesting manner, and Miss Lucy Larcom contributes an article, "Midsummer Poets," which will be found worthy of reading by older heads than those for whom *St. Nicholas* is mainly intended. Mr. Noah Brooks' story, "The Boy Emigrant," is continued, and the lads whom we have followed on their weary path across the continent are at last at work with pick and shovel. To enumerate all of the articles in *St. Nicholas* would take up too much of our space; all the contributions are good, the illustrations particularly so, and we think Jack in the Pulpit marshalls in the rear guard with his usual hats of wisdom and information.

The Bulletin of the Nuttall Ornithological Club in its second number, which has just appeared, has taken a new departure and announces itself as a regular quarterly ornithological journal, with departments of Recent Literature and General Notes. The editorial control is now in the hands of Mr. J. A. Allen who has eminent help promised. The typography is excellent and the table of contents—although not so entertaining as in the first number—exhibits the intention of the club to make its *Bulletin* a first-class publication. It is to be hoped that before long the support will warrant a more frequent issue. A brief sketch of the rise and progress of the club, all the facts of which we gave in our issue of May 25th, opens the number. Mr. Ridway admits the European *Buteo vulgaris* to our fauna and describes its different plumages. E. W. Nelson gives a list of additions to the avi-fauna of Illinois, and many notes upon other species. Capt Chas. Bendire furnishes an account of the breeding habits, nests and eggs of Clarke's crow, which were almost unknown. A new duck resembling the gadwall is described by Dr. Thos. H. Streets, U. S. N., under the name of *Chaulelasmus Lowei*. In the "Notes" the breeding of the Canada goose in trees is confirmed; the generic position of the various southwestern wrens is discussed; the shooting of the curlew sandpiper in East Boston (its second occurrence in New England) is noted, the finding of *Anser Ross'i* in Oregon and of *Fulica Americana* in Connecticut are mentioned; and the capture of two specimens of the rare Ipswich sparrow (*Passerculus princeps*), one in New Brunswick and the other near New Haven, is detailed.

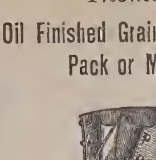
MANUAL OF VERTEBRATE ANIMALS, by Prof. D. S. Jordan; Jansen, McClurg & Co., Chicago, 1878.

The purpose of this work is to reduce the labor of classifying and ascertaining names of specimens. Its peculiar feature consists in the bringing together of short diagnostic descriptions of the vertebrate animals east of the Mississippi River and north of North Carolina and Tennessee, exclusive of marine species, and in the guiding of the student to these descriptions by means of artificial keys, such as have been so long and successfully used in the study of botany. The system applied by Dr. Coues (Key to North American Birds) is here for the first time extended to mammals, Reptiles and fishes. We confess to having held a prejudice against this book previous to its publication (being aware of the author's intention), but an examination causes us to believe that the author has really succeeded in accomplishing what he has set out to do. Prof. Jordan seems to have been very fortunate, at least in those cases in which we have tested his analysis, in picking out the salient points which are of best taxonomic value and at the same time most patent to the eye, and this book may prove of immense value to beginners, although the tendency of all such helps is to make the student less self reliant and unwilling to become himself an investigator.

The work is fairly up to date, and, the publishers claim, is the cheapest (only $2) descriptive work of any immediate and direct value to the beginner, is the only work containing arranged descriptions of our reptiles, and is the only work containing even the names of our fresh water fishes—to say nothing of the descriptions.

Those using it, should, however, be cautioned against relying too implicitly on the specific descriptions which are necessarily very brief. The chief value of the analysis is in finding the family and genus. The book contains also a glossary of the technical terms used, and a full account of the derivations of the scientific nomenclature. These features will render it additionally attractive to teachers in zoology, for whom it is specially designed, and to whom we recommend it as a work of ready reference for identification; but not all as a complete library of natural history.

Appleton's Journal comes to us for the second time in this its new monthly form, which we candidly admit we do not like. The old series was looked for eagerly as a weekly visitor, and although the same high literary standard is maintained in the present we prefer the old form. The illustrations have not been entirely abandoned, as the present number has for a frontispiece a very fine engraving, "Going to School," from a painting by Mdlle J. Bole. The continuation of George Sands' novel, "Marianne," is the first serial. G. F. Ferris describes "Four Great Song Composers," Schubert, Schumann, Franz and Liszt. Will Sikes' third discourses on "Parisian Newspaper Men," and Janius Henri Brown has a short story of Italian life. Mr. Julian Hawthorn is a contributor, and the list comprises many others well known as writers.



The Galaxy has for a frontispiece a likeness of the lamented Custer, taken from a picture sent to Messrs. Sheldon & Co. to be used in his forthcoming book, "My Life on the Plains." The first article is from the pen of John Austin Stearns, entitled "New York in the Continental Congress," and is intended to embrace the course pursued by this State in relation to independence, and to claim for its record of full and perfect patriotism. Mr. Black's charming story "Madcap Violet" is continued, and the tribulations of the heroine and her lover rouse our warmest sympathies, heightened, perhaps, by the incidents on a yachting cruise. An "Old New Yorker" writes of clubs and club life, as applied more particularly to our own city. The writer undertakes to begin that the New York Club originated with, or rather emigrated from the old Woodcock in Hudson street. We well remember that old-time place, with its little English bar, and the incomparable Welsh rarebits, for which it was celebrated. Our first introduction to "toby" was at the Woodcock. Mr. Fred. Whittaker, than whom no one is more competent, tells "The Story of Creedmoor," from its first conception down to the present day when new teams are organized to fight the International matches. Joaquin Miller contributes a poem, and Mr. Richard Grant White writes of Old King Cole and his band, and tells us the celebrated "fiddlers three" produced their music.

—(o)—

HEREDITARY INSTINCT.—I saw a curious case to day of what I may call the "hereditary instinct" of animals. I was smoking a pipe on a brae overlooking a field in which there were some five-and-twenty cows and a bull grazing. It was Sunday, about midday, and everything was quiet and still. I heard a loud roar or bellow. I thought it was the bull, but every animal in the field lifted their heads and left off grazing. There was another loud roar—and all the cows began walking towards and "centreing" on the bull, just as if they were going to mob a dog, and while I remained watching them (till my pipe was done), they kept at "attention" not resuming their grazing. Wombwell's menagerie was pitched in a town, about a quarter of a mile from where the cattle were grazing, and the roar was the roar of a lion. It must have been hundreds, aye, perhaps thousands of years since the ancestors of these cattle heard the roar of a lion, but still they recognized it as an enemy. In a cagefnl of cage bred canaries we sometimes see a flutter when a hawk passes the window, but they may have learned this from their mothers or grandmothers who had been wild, and the hawk, being a common occurrence would keep up the memory—the old birds learning the young ones, but it is a thing "no fellow can understand" how the cattle knew the roar of the wild beast. The lion in his wild state would probably just as soon dine on an old woman as on a cow, but if there had been five-and-twenty old women and an old gentlemen picnicing in that field I doubt if the roar of a lion would have stopped their grubbing—if they, like the cattle, had never seen, heard, or read of a lion. The wind was from the cattle towards the menagerie, they did not wind him; neither did they mistake the roar of the lion for the challenge of another bull, as not one answered him.—*Scotus, in Land and Water.*

Thomson's

Oil Finished Grain Leather Shoe-Pack or Moccasin.

With Sole, Price, $7.50. Without Sole, $5.50.

Made with heavy sole for land use; also without sole for snow and canoe purposes. All hand sewed and strongly made. Laced in front with hooks (over English style of water-tight tongue), thereby securing PERFECT FIT around ankle, thus preventing all slipping at the heel. Made with broad soles and on scientific principles.

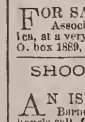
Fills the want long felt by sportsmen for an easy fitting and durable shoe.

In ordering, state size of boot worn. Sent by mail on receipt of price, with 40 cents additional for postage, or by express C. O. D. everywhere. Manufactured by THOMSON & SON, 398 Broadway, New York. jn27-1f

Good's Oil Tanned Moccasins.

The best thing ever worn by sportsmen. Not injured by wetting and drying—always soft and easy to the feet. Four different styles. Prices to suit the times. Send for illustrated circular and price list. (Successor to Frank Good). MARTIN S. HUTCHINGS, P. O. Box 348 Dover, N. H. jn27 1f

The Kennel.



FOR SALE.—BLOOD RED IRISH SETTER pups. My Red Irish setter Bitch Belle (prize winning, second at Mineola, L. I., 1875,) having whelped a litter of VERY HANDSOME puppies to Hamilton Thompson's Dieg (No. 118 A. K. & S.) are now for sale at a reasonable price. Call on or address JOSEPH E. FISHER, 179 Flatbush avenue, Brooklyn, L. I. 1t

WANTED.—TO BUY A GOOD BEAGle hound not over three years old; bitch preferred. Apply to Drug Store, 23 Jackson street, New York: 1t

STUD DOG.—ROBINSON'S "JACK," the famous red setter, by Putman's Dash now dead, is offered for stud purposes at $25 for service. Address W. H., at this office. jn13 1f

RED IRISH SETTER PUPS FOR Sale—Sire, imported red Irish Don, dam Maud, grand dam Gypsy by Rodney's Dash; full pedigree given by inquiring of C. MILEY, Lancaster, Pa. jn12-5t

LISTEN!

The Sportsmen's Bell tells the position of the dog, carries the birds to lie closer. Rapidly coming into use in early woodcock shooting, cocking and general shooting, where the cover is thick. Sold by dealers in guns and sporting goods. Samples sent by mail postpaid, 50 cents. BEVIN BROS. MANUFACTURING CO., East Hampton, Conn. Jn8 3m

TWO FINE BROKEN DOGS FOR Sale.—Dan, a Black Setter dog thoroughly broken, out of Scott Rodman's Dash, and "Shippam's Black and Tan bitch, four years old. Duke, Red Irish Setter out of B. Nelson's Maggie thoroughly broken in every respect, two years old. Parties who wish to purchase can have the dogs worked for them, so they may be satisfied before purchasing. Address J. W. this office. jn20tf.

BLOOMING GROVE PARK ASSOCIATION.

FOR SALE.—ONE SHARE IN ABOVE Association. The best Game Preserve in America, at a very low figure. Address J. F. O. W., P. O. box 1889, Boston. aug3 1f

SHOOTING PROPERTY TO RENT.

AN ISLAND OF SALT MARSH IN Barnegat Bay, 60 miles from New York; one hour's sail from Toms River, N. J., known as the "Crooling Point," and one of the best in the bay for duck and goose shooting in fall and spring; a good place for sport if you don't object to roughing it. There is a comfortable little house on the island; rent $100. Address box 58 Toms River, N. J. aug3 3t

AN OLD MOOSE HUNTER

Intending to start for Nova Scotia about the 1st of September on his annual hunting and fishing excursion, desires three companions to make up a camp party of four. Any three "good fellows" who can stand the cruise and wish to go, please address P. O. box 254, Hyde Park, Boston. aug3 1t

A Sportsman's Home for Sale.

Within an hour's ride of the City of Philadelphia, an excellent farm of 164 acres, two fine stone dwelling houses, two stone barns, with necessary outbuildings, beautifully situated, and in every particular a very desirable property, especially to those fond of field sports. Ruffed grouse, pheasants, quail, hares, squirrels and foxes abound. A fine stream runs through the property. Will be sold on very easy terms, or exchanged for city property. Address W. C. HARRIS, 124 South Third street, Philadelphia. aug3 tf

THE "FISHING LINE."

Brook Trout and Crayling Fisheries

OF NORTHERN MICHIGAN, VIA

Grand Rapids and Indiana Railroad.

(Mackinaw, Grand Rapids & Cincinnati Short Line.)

The waters of the Grand Traverse Region and the Michigan North Woods are unsurpassed, if equalled, in the great abundance and variety of fish contained.

Brook Trout abound in the streams, and the famous American Grayling is found only in these waters.

Brook Trout Season opens May 1st.
Grayling Season opens June 1st.
Black Bass, Pike, Pickerel, and Muscalonge are also found in large numbers in the many lakes and lakelets of this territory. The sportsman can easily send trophies of his skill to his friends or "Club" at home, as ice for packing fish can be had at many points.

Take your family with you. The scenery of the North Woods and lakes is very beautiful. The air is pure, dry, and inviting. The climate peculiarly beneficial to those suffering with hay fever and asthma.

The Hotel Accommodations, while plain, are, as a rule, good, far surpassing the average in countries new enough to afford the finest of fishing.

On and after June 1st Round Trip Excursion Tickets sold to Points in Grand Traverse Region, and each week-day to Petoskey and Mackinaw and Sp ternu; also on and after July 1st Mackinaw and Lake Superior Excursion Tickets.

Dogs, Guns, and Fishing Tackle Carried Free at Owner's risk.

Camp Cars for Fishing Parties and Families at low rates.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide, containing full information as to Hotels, Boats, Guides, &c., and accurate maps of the Fishing Grounds, Send to Forest and Stream office, or address

J. H. PAGE, G. P. & T. A.,
may4 4m Grand Rapids, Mich.

Ferry boats leave New York, foot of East Thirty-fourth street, every fifteen minutes previous to the departure of trains.

THE SPORTSMEN'S ROUTE.

Chicago & Northwestern Railway.

This great corporation now owns and operates over two thousand miles of road, radiating from Chicago. Like the fingers in a man's hand, its lines reach to all directions, and cover almost all the country north northwest, and west of Chicago. With one branch it reaches Racine, Kenosha, Milwaukie, and the country to the northward; with another line it pushes through Janesville, Watertown, Oshkosh, Fond du Lac, Green Bay, Escanaba, to Negaunee and Marquette; with an other line it passes through Madison, Elroy, and to St. Paul and Minneapolis; branching westward from Elroy, it runs to and through Winona, Owatonna, St. Peter, Mankato, New Ulm, and stops not until Lake Kamesks, Dakota, is reached; another line goes from Chicago and runs through Elgin and Rockford to Freeport, and, *via* the Illinois Central, reaches Warren, Galina and Dubuque, and the country beyond. Still another line runs almost due westward, and passes through Dixon, Sterling, Fulton, Clinton (Iowa), Cedar Rapids, Marshalltown, Grand Junction, to Council Bluffs and Omaha. This last named is the "GREAT TRANS CONTINENTAL ROUTE," and the pioneer overland line for Nebraska, Colorado, Utah, Idaho, Montana, Nevada, California, and the Pacific Coast. It runs through the Garden of Illinois and Iowa, and is the safest, shortest, and best route to Omaha, Lincoln, and other points in Nebraska, and for Cheyenne, Denver, Salt Lake City, Virginia City, Carson, Sacramento, San Francisco, and all other points west of the Missouri River.

TO SPORTSMEN:

THIS LINE PRESENTS PECULIAR ADVANTAGES—FOR PRAIRIE CHICKEN, DUCK, GEE E, AND BRANT SHOOTING. THE IOWA LINE TO-DAY OFFERS MORE FAVORABLE POINTS

than any other road in the country, while for Deer and Bear Hunting, and Trout Brook, Lake Salmon, Pike, Pickerel, and Bass Fishing a hundred points on the Northern and Northwestern lines of this company will be found unsurpassed by any to the West.

MARVIN HUGHITT, W. H. STENNETT,
Gen. Supt., Chicago. Gen. Pass. Agt., Chicago,
ap16

TO SPORTSMEN:

THE PENNSYLVANIA R. R. COMPY

Respectfully invite attention to the

Superior Facilities

afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. THE ORVIS REEL.

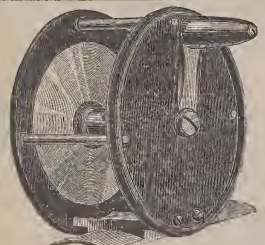
The Most Compact, Neatest, Cheapest, and Durable Reel in the Market.



NO 1.—This Reel is extra nickel-plated and finely finished. Is perforated to make it light, and keep it free from sand, also that the line may dry without removing it from the reel after use. Has a very perfect click. It is very light, very strong, and holds from 40 to 50 yards of line. It is more compact and less cumbersome than ordinary 20 yard reels. It is quite narrow, and takes up line rapidly. Put up in neat Black Walnut Case, price $5.

NO 2.—For Prizes. Same style as No. 1. Heavy Gold Plate. Extra finish, with case, price $10.

Sent by mail, postage prepaid, on receipt of price, or by express, C. O. D. LIBERAL DISCOUNT TO THE TRADE. Send for New Price List of Fishing Rods, Reels, Flies, Lines, &c., &c. Mention this paper.

W. H. HOLABIRD

Would most respectfully acoounce to his patrons and friends that he is prepared to make

Shooting and Fishing Suits

at the above prices. The ten dollar suit is better made than any competitor can offer for the same money. My original design having been appropriated by other manufacturers, I have been compelled to make many changes in the arrangement of pockets, &c., for which I have to thank the fraternity at large for suggestions. I believe that I have the BEST SHOOTING AND FISHING COATS IN THE WORLD,

and respectfully solicit your orders. I send my new Illustrated Catalogue, 15 pages, free on application.

Dealers will find it to their advantage to handle my goods. They are better known and more highly esteemed than any other make.

Address

W. H. Holabird,
VALPARAISO, IND.

N. Y. Office: No. 1 COURTLAND ST.

THE NEW

BOSTON SHOOTING SUIT,

Manufactured only by

G. W. SIMMONS & SON,

Boston, Mass.

We offer this season an entirely new design of WATER-PROOF SHOOTING SUIT (made from extra quality duck), in the preparation of which we have been assisted by the advice and suggestions of our best resident sportsmen.

The design embraces the best points of the English and French Suits, combined with the necessary requirements for American service. Particular attention has been paid to color.

Each suit is thoroughly water-proofed by a new patent process. The seams and pocket corners being securely fastened, the arm holes ventilated, and nothing neglected to render the suit perfect in every respect.

The price has been fixed at $13, to include Hat or Double Visored Cap, Detachable Haverlock, Coat, Vest, and Pantaloons.

One hundred suits will be kept ready in stock, so that we can furnish to order any size required, at a moment's notice.

In the *Golden Rule* (Rev. W. H. H. Murray's paper) the enthusiastic editor writes:—

"We were shown, the other day, a new water-proof suit, specially adapted for sportsmen, designed and made up by Simmons & Son, of Boston, and to which we call the attention of all brethren of the out-door and shore-shooting fraternity, because it meets the demand of personal comfort and convenience beyond anything of home manufacture seen by us before. As a sportsman, we give it our unqualified endorsement, as combining the best points of the English suits, and in addition skilfully adapted to the necessities of the American service. It is a most admirable and satisfactory contrivance in color, style, waterproof quality and capacity. The coat is a marvel in this latter respect."

Persons ordering from a distance need send only the following to be sure of a perfect fit:—Waist Measure, Height, Breast Measure, Length of Sleeve, Size of Head.

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close, and with *great penetration*. For field, forest and water shooting it rauks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12½, and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *smoke*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

CHALLENGE.

The undersigned is prepared to prove all the superior qualities he claims for his powder.

Safety, Cleanliness, Strength, Little Recoil, Little Smoke, Small Report, Less Heating of the Barrel in Rapid Firing, and its Regularity in Shooting.

He challenges all riflemen to shoot against him with black powder, 200 rounds, without wiping; 100 rounds off-hand, at 200, 500 and 1,000 yards respectively, and 100 rounds in any position at same distances; the 200 rounds equally divided at the three ranges; sighting shots extra.

Will shoot for money if desired.

The powder is also well adapted for shot guns.

Inquire for the "Dittmar Powder" of your dealer, or address the

TESTIMONIALS.

From Hon. J. T. Headley, the Historian, Author of "Adirondack, or Life in the Woods," &c.

It is admirably written and has just enough of humor, sentiment, and description of scenery mixed, to make it delightful. The illustrations are well chosen and very effective, while the instructions respecting routes, localities, distances, outfits, &c., embrace everything that can be desired. Taking it all in all, it is the most complete book that has been published on the Adirondacks, not excepting even my own—a compliment that I trust will be properly appreciated for its extraordinary distinterestedness.

From Albert B. Street, the Poet and Author of "Woods and Waters," "The Indian Pass," &c.

I think it is the *best* work on the forest that has appeared—superior in word-painting to Murray's, and full of wood pictures and vivid scenes of camp-life. We realize that we are in the forest, are living with you in the scenes described, and that the trees are waving and the waters flowing over and by us. This, I think, the true test of a good book, impressing its reality and distinctive life on the mind. As a "Guide Book," it is most creditable and valuable. Indeed, it is the *only* thing of the kind that has yet been published—the very thing that has been so long wanted and waited for. It must have cost you intense application and labor. You may well be content that you have produced a good book.

From Benson J. Lossing, the Historian.

I have read those portions descriptive of the places which came under my personal observation, with the deepest interest and most cheerfully testify to the general accuracy of your pictures as I recall impressions made of them at the dates of my visits. I regard your "Descriptive Guide" and the "Appendix" as a most useful—may indispensable, manual for tourists to that wonderful Wilderness. A tour in that region is eminently a practical matter, and for that reason I regard your "Guide" as an important, useful, and timely publication.

BERDAN'S PATENT SOLID ANVIL

STURTEVANT'S PATENT MOVABLE ANVIL

Paper and Metallic Shells

FOR

Breech Loading Shot Guns,

Manufactured by the

UNION METALLIC CARTRIDGE CO.,

BRIDGEPORT, CONN.

THE STURTEVANT SHELLS are the easiest reloaded. Do not have to unscrew the head nor use an awl to remove the exploded caps. THE PATENT MOVABLE ANVILS, made of steel wire, will not bend or break.

THE BERDAN PATENT SHELLS, new model, with Hobbs' patent waterproof primers, never miss fire, and are highly prized by all that have used them.

PAPER SHELLS.—By repeated experiments and great outlay for improved materials, and machinery made expressly for the purpose, we can now warrant our BROWN PAPER SHELLS equal to any imported. They are sure fire, and will not burst in the gun.

Inquire of any of the dealers in sporting materials for the U. M. C. Co.'s Shells.

Not sold at retail by the manufacturers. dec23 tf

CHAMPION GUNS OF ENGLAND.
PAPE'S
Unrivalled Sporting Guns.

Stand unequalled in every contest. Their performance at the London Trials of 1875 beats the records of any maker in the world.

1875. 12-Gauge, Choke Boring.

Maker of Gun.	Exhibitor.
1st—Grenner	Grenner.
2d- Pape	Davidson.
3d—Pape	Pape.

Out of a class of 68 guns, 8 out of the 6 best were made by Pape. The Grenner gun was protested against on the spot for having its score false counted, the fact proven there, and afterwards confirmed by same gun being shot for two days per week for six weeks in succession, when its average score only took 4th place, its very best score being greatly below the scores of the best six guns.

1875. 12-Gauge, Old Sporting Bore.

Maker of Gun.	Exhibitor.
1st—Pape	Davidson.
2d—Pape	Davidson.

1875. Long Range, 60 yards, Choke Bores.

1st—Pape	Davidson

60 yards, Long Range, Sporting Boring.

1st—Pape	Davidson

Those champion Long Range guns, only 7 pound weight, with a charge of 3¼ dr. to 1¼ oz. shot, beat the best 8 bore Grenner gun at 60 yards; weight, 15 lbs.; 6 drachms and 2¼ oz. shot.

1875. The Sportsman's Snb. Cup, valued at £45, was also awarded to W. R. Pape, for the original invention of choke boring. Winner of the London Gun Trials of 1858, 1859, 1866. Address

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In the new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

W. W. GREENER'S
DOUBLE CLOSE-SHOOTING GUN. Winner of the Silver Cup, value 40 guineas, at the Great London Field Trial 1875, beating 33 competitors with 68 guns, also winning in all the other classes for the Improved System of Boring. These guns will kill from 80 to 100 yards, loaded with large shot, and will shoot well with small shot with a less powder charge than guns bored upon the old system. For report of the Gun Trial apply to Messrs. McLaran, Williams & Co., Agents, St Louis, U. S. A. Address

W. W. GREENER,
St. Mary's Works, Birmingham, England.

SCHUYLER HARTLEY & GRAHAM
19 Maiden Lane, 20 & 22 John street, N. Y

BREECH LOADING GUNS
A SPECIALTY.

AGENTS
for the following celebrated makers:

W. & C. SCOTT & SONS (winners at the International Gun Trial of 1875); J. P. CLABROUGH & BRO.; P. WEBLEY & SONS, and WESTLEY RICHARDS.

THOMSON'S HUNTING SUITS AND OIL FINISHED GRAINED LEATHER SHOE PACKS.

DIXONS & HAWKSLEY'S SHOOTING TACKLE

STURTEVANT BRASS SHOT SHELLS.

BUSSEY'S PATENT GYRO PIGEON AND TRAP WITH CASE, AND 100 BIRDS.

Black's Patent Cartridge Vest.

This Vest affords the best arrangement yet invented for carrying cartridges. The weight is so evenly distributed that it is scarcely felt. Cartridges can be carried with the *heads down* in this vest, which is of great importance when brass shells are used, as when carrying them with the head up the weight of the shot of ten forces the wad forward, when had shooting is the result. In ordering send measurement around the chest.

PRICE $7.50

AGENTS FOR THE

Union Metallic Cartridge Company's Ammunition,

WARRANTED THE BEST IN THE MARKET. SEND FOR CIRCULAR.

WM. READ & SONS.,
13 Faneuil Hall Square,
BOSTON.

Sportsmen are cautioned against imitations of these Guns.

Winners of International Gun Trial.

Agents for Genuine
